(OPTION) 9**

BEFORE CALLING FOR SERVICE 10

THIS REFRIGERATOR IS MANUFACTURED WITH GREAT CARE, AND UTILIZES THE LATEST IN TECHNOLOGY.

WE ARE CONFIDENT THAT YOU WILL BE FULLY SATISFIED WITH IT'S PERFORMANCE AND RELIABILITY.

BEFORE YOU START YOUR REFRIGERATOR, PLEASE READ THIS BOOKLET CAREFULLY. IT PROVIDES EXACT INSTRUCTIONS FOR INSTALLATION, OPERATION AND MAINTENANCE, AND ALSO SUPPLIES SOME USEFUL HINTS.

INSTALLATION

1. Select a good location.
Place your refrigerator where it is easy to use.
2. Avoid placing the unit near heat sources, direct sunlight or moisture.
3. To ensure proper air circulation around the fridge-freezer, please maintain sufficient space on both the sides as well as top and maintain at least 2 inches (5 cm) from the rear wall.
4. To avoid vibrations, the unit must be level.
If required, adjust the leveling screw to compensate for unevenness of the floor.
The front should be slightly higher than the rear to aid in door closing.
Leveling screw can be turned easily by tipping the cabinet slightly.
Turn the leveling screw clockwise to raise the unit, counterclockwise to lower it.
5. Clean your refrigerator thoroughly and wipe off all dust accumulated during shipping.
6. Install accessories such as ice tray, shelf, etc., in their proper places. They are packed together to prevent possible damage during shipment.
7. Connect the power supply cord (or plug) to the outlet. Don't double up with other appliances on the same outlet.
8. Prior to use, leave your refrigerator on for 2 or 3 hours.
Check the flow of cold air on the evaporator to ensure proper cooling.
Your refrigerator is now ready for use.

FEATURE CHART

OPERATION

STARTING

When your refrigerator is first installed, allow it 2-3 hours to stabilize at normal operating temperature prior to filling it with fresh food.

If operation is interrupted, allow a 5 minute delay before restarting.

TEMPERATURE CONTROL

Your refrigerator has a control that let you regulate the temperature in the refrigerator.

Initially, set the control at mid-position.

For colder temperatures, adjust the control to a higher number, and for warmer temperatures, adjust the control to a lower number.

ICE MAKING

- To make ice cubes, fill the ice tray with water and place it on the evaporator.
- To remove ice cubes, hold the tray at its ends and twist gently.

TIP To remove ice cubes easily, run water on the tray before twisting.

OPERATION

DEFROSTING

- It is necessary to regularly defrost your refrigerator in order to ensure efficient operation. The frost on the surface of the evaporator should not exceed a quarter of an inch(6mm) before defrosting.
- To defrost, turn the control to '0'.
- Before you start the defrosting operation, remove food from the evaporator and place the drip tray in its proper position.
- When defrosting is completed, remove the drip tray, empty water, dry and put it back to its normal position. Turn the control dial to a desired position.

CAUTION: Never use any sharp or metallic instruments to remove ice, frost or ice tray from the evaporator.

SUGGESTIONS ON FOOD STORAGE

STORING FOOD

- Store fresh food in the refrigerator. How food is frozen and thawed is an important factor in maintaining its freshness and flavor.
- Do not store food which goes bad easily at low temperatures, such as bananas, pineapples, and melons.
- Allow hot food to cool prior to storing. Placing hot food in the refrigerator could spoil other food, and lead to higher electric bills!
- When storing, wrap food in vinyl, or place in a covered container. This prevents moisture from evaporating, and helps food to keep its taste and nutrients.
- Do not open the door frequently. Opening the door lets warm air enter the refrigerator, causing temperatures to rise.
- Do not store bottles on the evaporator - they may break when frozen.
- Always clean food prior to refrigeration. Vegetables and fruits should be washed and wiped, and packed food should be wiped clean, to prevent adjacent food from spoiling.

CLEANING

It is important that your refrigerator be kept clean to prevent undesirable odors. Spilled food should be wiped up immediately, since it may acidify and stain plastic surfaces if allowed to settle.

Never use metallic scouring pads, brushes, coarse abrasive cleaners or strong alkaline solutions on any surface.

Before you clean, however, remember that damp objects will stick or adhere to extremely cold surfaces. Do not touch frozen surfaces with wet or damp hands.

EXTERIOR - Use a lukewarm solution of mild soap or detergent to clean the durable finish of your refrigerator. Wipe with a clean, damp cloth and then dry.

INTERIOR - Regular cleaning of the interior and interior parts is recommended. Disconnect the power supply, and remove food and shelves, trays etc. Wash all compartment and shelves, trays etc. with a baking soda solution. Rinse and dry.

WARNING

Always remove power cord from the wall outlet prior to cleaning in the vicinity of electrical parts. Wipe up excess moisture with a sponge or cloth to prevent water or liquid from getting into any electrical part and causing a electric shock. Do not use flammable or toxic cleaning liquids.

GENERAL INFORMATION

VACATION TIME

During average length vacations, you will probably find it best to leave the refrigerator in operation. When you plan to be away for an extended period, remove all food, disconnect the power cord, clean the interior thoroughly, and leave the door OPEN to prevent odor formation.

POWER FAILURE

Most power failures are corrected in an hour or two and will not affect your refrigerator temperatures. However, you should minimize the number of door openings while the power is off. During power failures of longer duration, place a block of dry ice on top of your frozen packages.

IF YOU MOVE

Remove or securely fasten down all loose items inside the refrigerator. To avoid damaging the leveling screw, turn them all the way into the base.

IMPORTANT WARNINGS

DO NOT USE AN EXTENSION CORD

If possible, connect the refrigerator to its own individual electrical outlet to prevent it and other appliances or household lights from causing an overload that could cause a power outage.

POWER CORD REPLACEMENT

If the supply cord is damaged, it must be replaced by a special cord or assembly available from the manufacturer or its service agent.

ABOUT GROUNDING(EARTHING)

In the event of an electric short circuit, grounding(earthing) reduces the risk of electric shock by providing an escape wire for the electric current.

In order to prevent possible electric shock, this appliance must be grounded.

Improper use of the grounding plug can result in an electric shock. Consult a qualified electrician or service person if the grounding instructions are not completely understood, or if you have doubts on whether the appliance is properly grounded.

VERY DANGEROUS ATTRACTION

An empty refrigerator can be a dangerous attraction to children. Remove either gasket, latch, lid or the entire door from your unused appliance, or take some other action to make it harmless.

This appliance must be grounded(earthed).

DON'T WAIT! DO IT NOW!

NEVER STORE EXPLOSIVES AND CHEMICALS

CAUTION

This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety. Children should be supervised to ensure that they do not play with the appliance.

REPOSITIONING THE DOOR HINGE(OPTION)

Your refrigerator is designed with a reversible door so that it may open from either left or right. It is best to reposition the door hinge as necessary at the outset since it is inconvenient to do so later. To change the door hinge please refer to the diagram below and proceed as follows:—

1. Remove Hinge Cover (A) and Hinge Cap (B).
2. Loosen three bolts (C) and remove Upper Hinge (D).
3. Remove Door.
4. Lay down Refrigerator.
5. Loosen two bolts (E) and remove Lower Hinge (F) and Washer (G).
6. Loosen Bolt (H) and remove Leg (J).
7. Insert Washer (G) to Lower Hinge (F) and fix them on the opposite side using two bolts (E).
8. Fix Leg (J) using Bolt (H).
9. Remove Hinge Cap (K) from Door and fix it on the opposite side.
10. Insert Door into Lower Hinge (F), insert Upper Hinge (D) to Door, and then fix it using three bolts (C).
11. Replace Hinge Cover (A) and Hinge Cap (B).
12. Carefully stand the appliance up, (you will need assistance to do this), and position it in its permanent location.
13. Check that the door opens and closes easily. Ensure that the door seal does not bind on the hinge side creating gaps which would allow air into the interior. Adjust the hinges if necessary.

This appliance should be stood on a firm, level floor with sufficient space for free airflow around it. (At least 10mm all round and, subject to location, 20mm beneath the worksurface). Avoid positions close to walls or corners. There must be sufficient room for free ventilation particularly at the back. The unit should be located away from direct heat sources, such as cookers, radiators and direct sunlight. If the unit is positioned where the temperature is too low, condensation will form on the outside of the cabinet. Normal room temperature is recommended.

Avoid locations which may be affected by draughts or dampness as this will impair the efficiency of the product.

Note

Reversing the doors is not covered by the warranty.

BEFORE CALLING FOR SERVICE

SERVICE CALLS CAN OFTEN BE AVOIDED!

IF YOU FEEL YOUR REFRIGERATOR IS NOT OPERATING PROPERLY, CHECK THESE POSSIBLE CAUSES FIRST :

PROBLEM	POSSIBLE CAUSES
REFRIGERATOR DOES NOT OPERATE	<ul style="list-style-type: none"> ● Has a house fuse blown or circuit breaker tripped? ● Has the power cord plug been removed or loosened from the electrical wall outlet?
TEMPERATURE TOO WARM	<ul style="list-style-type: none"> ● Temperature control not set on proper position. ● Appliance is placed close to wall or heat source. ● Warm weather-frequent door openings. ● Door left open for a long time. ● Large amount of foods are kept in the refrigerator.
ABNORMAL NOISE(S)	<ul style="list-style-type: none"> ● Refrigerator is installed in a weak or uneven place or leveling screw needs adjusting. ● Unnecessary objects placed in the back side of the refrigerator.
REFRIGERATOR HAS ODOR	<ul style="list-style-type: none"> ● Foods with strong odors should be tightly covered or wrapped. ● Interior needs cleaning.
DEW FORMS ON THE CABINET SURFACE	<ul style="list-style-type: none"> ● Not unusual during periods of high humidity. ● Door may have been left ajar.

Disposal of your old appliance

1. When this crossed-out wheeled bin symbol is attached to a product it means the product is covered by the European Directive 2002/96/EC.
2. All electrical and electronic products should be disposed of separately from the municipal waste stream via designated collection facilities appointed by the government or the local authorities.
3. The correct disposal of your old appliance will help prevent potential negative consequences for the environment and human health.
4. For more detailed information about disposal of your old appliance, please contact your city office, waste disposal service or the shop where you purchased the product.

- Information of fluorinated greenhouse gases used as refrigerant of this refrigerator.
