### (In the UK Only)

Important

The wires in this mains lead are coloured in accordance with the following code :

GREEN AND YELLOW : EARTH BLUE : NEUTRAL BROWN : LIVE

This appliance must be earthed

As the colours of the wires in the mains lead of this apparatus may not correspond with the coloured markings identifying the terminals in your plug, proceed as follows :

The wire which is coloured Green and Yellow must be connected to the terminal in the plug which is marked with the letter E or by the earth symbol( $\pm$ ) or coloured Green or Green and Yellow.

The wire which is coloured Blue must be connected to the terminal which is marked with the letter N  $\,$  or coloured Black.

The wire which is coloured Brown must be connected to the terminal which is marked with the letter L or coloured Red.

If a 13 amp(BS 1363) plug is used, fit a 13 amp BS 1362 fuse.

## Important safety instruction

Before it is used, this refrigerator must be properly installed and located in accordance with the installation instructions in this document.

Never unplug your refrigerator by pulling on the power cord. Always grip plug firmly and pull it straight out from the outlet.

When moving your appliance away from the wall, be careful not to roll over the power cord or to damage it in any way.

After your refrigerator is in operation, do not touch the cold surfaces in the freezer compartment, particularly when your hands are damp or wet. Skin could adhere to these extremely cold surfaces.

Unplug the power cord from the power outlet for cleaning or other requirements. Never touch it with wet hands because you can get an electric shock or be hurt.

Never damage, process, severely bend, pull out, or twist the power cord because damage the power cord may cause a fire or electric shock. You have doubts on whether the appliance is properly grounded.

Never place glass products in the freezer because they may be broken due to expansion when their contents are frozen.

Never allow your hands within the ice storage bin of the automatic ice maker. You could be hurt by the operation of the automatic ice maker.

The appliance is not intended for use by young children or infirm persons without supervision.

Young children should be supervised to ensure that they do not play with the appliance.

Never allow anyone to climb, sit, stand or hang on the refreshment center door. These actions may damage the refrigerator and even tip it over, causing severe personal injury.

Don't use an extension cord

Accessibility of Supply Plug Supply Cord Replacement If possible, connect the refrigerator to its own individual electrical outlet to prevent it and other appliances or household lights from causing an overload that could cause a power outage.

The refrigerator-freezer should be so positioned that the supply plug is accessible for quick disconnection when accident happens.

If the supply cord is damaged, it must be replaced by the manufacturer or its service agent or a similarly qualified person in order to avoid a hazard.

Do not modify or extend the Power Cord length.

• It will cause electric shock or fire.

Child entrapment

DANGER: Risk of child entrapment.

Before you throw away your old refrigerator or freezer:

Take off the doors but leave the shelves in place so that children may not easily climb inside.

This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety.

Children should be supervised to ensure that they do not play with the appliance.

Don't store or use gasoline or other flammable vapor and liquids in the vicinity of this or any other appliance.

Grounding (Earthing)

Don't store

\Lambda warning

In the event of an electric short circuit, grounding (earthing) reduces the risk of electric shock by providing an escape wire for the electric current.

In order to prevent possible electric shock, this appliance must be grounded improper use of the grounding plug can result in an electric shock. Consult a qualified electrician or service person if the grounding instructions are not completely understood, or if you have doubts on whether the appliance is properly grounded.

# Identification of parts

A Warning

- A Keep ventilation openings, in the appliance enclosure or in the built-in structure, clear of obstruction.
- ⚠️ Do not use mechanical devices or other means to accelerate the defrosting process, other than those recommended by the manufacturer.
- Do not damage the refrigerant circuit.
- ⚠️ Do not use electrical appliances inside the food storage compartments of the appliance, unless they are of the type recommended by the manufacturer.
- The refrigerant and insulation blowing gas used in the appliance require special disposal procedures. When disposal, please consult with service agent or a similarly qualified person.

This appliance contains a small amount of isobutane refrigerant (R600a), natural gas with high environmental compatibility, but it is also combustible. When transporting and installing the appliance, care should be taken to ensure that no parts of the refrigerating circuit are damaged. Refrigerant squirting out of the pipes could ignite or cause an eye injury. If a leak is detected, avoid any naked flames or potential sources of ignition and air the room in which the appliance is standing for several minutes.

In order to avoid the creation of a flammable gas air mixture if a leak in the refrigerating circuit occurs, the size of the room in which the appliance may be sited depends on the amount of refrigerant used. The room must be 1m <sup>2</sup> in size for every 8g of R600a refrigerant inside the appliance. The amount of refrigerant in your particular appliance is shown on the identification plate inside the appliance. Never start up an appliance showing any signs of damage. If in doubt, consult your dealer.

### Where to Install

- 1. Place your appliance where it is easy to use.
- 2. Avoid placing the unit near heat sources, direct sunlight or moisture.
- 3. To ensure proper air circulation around the fridge -freezer, please maintain sufficient space on both the sides as well as top and maintain at least 2 inches (5 cm) from the rear wall.
- 4. To avoid vibrations, the appliance must be leveled.

Disposal of the This applia

old appliance

Select a good

location

This appliance contains fluid (refrigerant, lubricant) and is made of parts and materials which are reusable and/or recyclable.

5. Don't install the appliance below 5 °C. It may cause affect the performance.

All the important materials should be sent to the collection center of waste material and can be reused after rework (recycling). For take back, please contact with the local agency.

### Installation

| \land Warning  | <b>Door removal</b><br>Electric Shock Hazard<br>Disconnect electrical supply to refrigerator before installing.<br>Failure to do so could result in death or serious injury.  |
|--|---|
| Remove lower<br>cover and<br>then feed water<br>tube | If your access door is too narrow for the refrigerator to pass through, remove the refrigerator door and pass the refrigerator laterally. Remove the lower cover by loosening all the screws. Then pull up the feed water tube while pressing area (), shown in the figure, to the right. |
|  | NOTE • If a tube end is deformed or abraded, cut the part away.   |
| Remove the<br>freezer<br>compartment<br>door         | 1) Removing the hinge cover by loosening the screws. Separate all connection wires except for the earth line after.   |
|  | 2) Remove the keeper by rotating it counter<br>clockwise ( ①) and then lifting the upper<br>hinge up (②).   |
|  | NOTE<br>• When removing the upper hinge, be careful that the door does not fall forwards .  |
|  | 3) Remove the freezer compartment door by lifting it upward. This time, the door should be lifted enough for the feed water pipe tube to be completely pulled out.  |
|  | NOTE • Move the refrigerator compartment door passing through the access door and lay it down, but be careful not to damage the feed water pipe tube.   |
| Remove the<br>refrigerator<br>door                   | 1) Loosen the hinge cover screws and remove<br>the cover. Remove connection wire, if any,<br>except for the earth line.   |
|  | 2) Remove keeper by rotating it clockwise ( ①)<br>and then remove the upper hinge by lifting<br>it up (②).  |
| 6  | 3) Remove the refrigerator compartment door<br>by lifting it up.  |

Pass the refrigerator

Pass the refrigerator laterally through the access door as shown in the right figure.

## **Door replacement**

Mount them in the reverse sequence of removal after they pass through the access door.

# Feed water pipe installation (\*Dispenser model only)

# Before installation

- Automatic ice maker operation needs water pressure of 147~834 kPa (1.5~8.5 kgf/cm<sup>2</sup>) (That is, an instant paper cup (180 cc) will be fully filled within 3 sec.).
- If water pressure does not reach the rating 147 kPa (1.5 kgf/cm<sup>2</sup>) or below, it is necessary to purchase a separate pressure pump for normal automatic icing and cool water feed.
- Keep the total length of the feed water pipe tube within 8 m and be careful for the tube not be bent. If the tube is 8 m or longer it may cause trouble in water feed owing to the drain water pressure.
- Install the feed water pipe tube at a place free from heat.

### A Warning

- Connect to potable water supply only.
- Refer to instructions with water filter kit for installation.

If the freezer compartment door is lower than the refrigerator compartment door

### Height adjustment

Level the door by inserting flat ( – type) driver into the groove of the left height adjusting screw and rotate it clockwise  $(\mathbb{O})$ .

Level the door by inserting flat ( - type) driver into the groove of the right height adjusting screw and rotate it clockwise ( $\oplus$ ).

### After leveling the door height

The refrigerator doors will close smoothly by heightening the front side by adjusting the height adjusting screw. If the doors do not close correctly, performance may be affected.

Next

1. Wipe off all dust accumulated during shipping and clean your appliance thoroughly.

- Install accessories such as the ice cube box, cover evaporating tray, etc., in their proper places. They are packed together to prevent possible damage during shipping.
- Connect the power supply cord (or plug) to the outlet. Don't double up with other appliances on the same outlet.

compartment door is higher than the refrigerator compartment door

If the freezer

## Starting

When your refrigerator is first installed, allow it to stabilize at normal operating temperatures for 2-3 hours prior to filling it with fresh or frozen foods. If operation is interrupted, wait 5 minutes before restarting.

### Adjusting the temperatures and functions \*Non dispenser model

Operation

Display power saving (on some model)

#### This function save the display power

Press the FREEZER and EXPRESS FRZ. buttons simultaneously and hold them for 5 seconds until the Ding sounds. All LED/LCDs will then turn ON, then OFF. When the power saving mode is activated, the display will remain off until the next time the door is opened. Then, it will come on whenever a door is opened or a button is pressed and remain on for 20 seconds after the last door opening or button selection. To deactivate the power saving mode, press the FREEZER and EXPRESS FRZ. buttons simultaneously and hold them for 5 seconds until the Ding sounds.

You can adjust temperature of and freezer room and refrigerator room.

### **Display Power Saving Mode**

This function places the display into power saving mode until the next time the door is opened.

Press the FREEZER and EXPRESS FRZ. buttons simultaneously and hold them for 5 seconds until the Ding sounds. All LEDs will then turn ON, then OFF. When the power saving mode is activated, the display will remain off until the next time the door is opened. Then, it will come on whenever a door is opened or a button is pressed and remain on for 20 seconds after the last door opening or button selection. To deactivate the power saving mode, press the FREEZER and EXPRESS FRZ. buttons simultaneously and hold them for 5 seconds until the Ding sounds.

### You can adjust temperature of and freezer room and refrigerator room.

Freezer Compartment temperature adjustment

Refrigerator Compartment temperature adjustment

- ★ Whenever pressing button, setting is repeated in the order of (Middle ) → (Middle Strong ) → (Strong) → (Weak) → (Middle Weak).
- The actual inner temperature varies depending on the food status, as the indicated setting temperature is a target temperature, not actual temperature within refrigerator.
- Refrigeration function is weak in the initial time. Please adjust temperature as above after using refrigerator for minimum 2~3 days.

How to adjust the temperature in the freezer compartment

How to adjust the temperature in the refrigerator compartment Dispenser use (on some model)

• Select among crushed ice, water, and cubed ice and press the push switch with a glass or other container.

Crushed Ice Light the crushed ice lamp by pressing the selection button. Water Light the water lamp by pressing the selection button. Cubed Ice Light the cubed ice lamp by pressing the selection button.

• Reference : Hold your cup in place for a couple of seconds after dispensing ice or water so the last few drops go in to your cup instead of the floor.

Automatic icemaker (on some model)

- The automatic icemaker can automatically make 6 cubes at a time, 50~60 pieces per day. This quantity may vary by circumstance, including ambient temperature, door opening, freezer load. etc.
- Icemaking stops when the ice storage bin is full.
- If you don't want to use the automatic icemaker, turn the icemaker switch to OFF. If you want to use automatic icemaker again, change the switch to ON.

#### NOTE

• The sound produced when the ice drops in the ice storage bin is normal, not caused by the defective product.

#### WARNING

 $\cdot\,$  Do not insert your hands in to the Icemaker in operation. It may cause to injure you.

#### WARNING

 $\cdot\;$  Do not store ice (cubes) longer then two weeks.

Cautions in using the dispenser (on some model)

#### To get cold water

The dispensed water is not icy cold, but just cool or cold. If you want colder water, dispense ice before dispensing water.

If you have difficulty in replacing the ice storage bin

Rotate the rotary gear in 1/4 cycle as shown in the figure, and then push it back.

#### When the ice dispenser will not operate properly

It is normal when a small amount of ice is left. Allow approximately one day for the ice maker to restock.

If the ice forms into a mass to interrupt the operation of the automatic ice maker mechanism, remove the ice storage bin, separate the ice, discard the inseparable ice, and put the ice pieces back into the bin. The intermittent dispensing of ice is normal. However, since ice may be stuck to block the ice chute, regularly check the ice chute to clear the obstacles.

#### WARNING

- Never insert the hand or any other object into the icechute since it may damage the parts or hurt the hand.
- When ice is discolored, stop using the dispenser and call the service centre.

#### CAUTION

- Do not touch the blade ① ③ since may injure the hand.
- Do not insert your hands in to the icemaker in operation. It may cause to injure you ②.
- Do not hang on the ice dispenser or the ice storage bin to your children since it may injure the body.

|                                   | Diagnosis (failure detection) function  |
|                                   | <ul> <li>Diagnosis function automatically detects failure when failure is found in product during<br/>the use of refrigerator.</li> </ul>   |
|                                   | • If failure occurs at product, it does not operate though pressing any button and normal indication is not done. In this case, do not turn power off but immediately contact with the local service center. A lot of time are need for service engineer to detect the failed part if turning it off. |
| How ice/cold<br>water is supplied | Water is cooled while stored in the water tank in the refrigerator compartment, and then sent to the dispenser.   |
|                                   | Ice is made in the automatic ice maker and sent to the dispenser divided into crushed or cubed form ice.  |
|                                   | NOTE  |
|                                   | • It is normal that the water is not very cold at first. If you want colder water, add ice into the glass.  |
| Cautions                          | Throw away the ice (about 20 pieces) and water (about 7 glasses) first made after refrigerator installation.  |
|                                   | The first ice and water may include particles or odor from the feed water pipe or feed water box. This is necessary in case that the refrigerator has not been used for a long time.  |
|                                   | Keep children away from the dispenser.  |
|                                   | Children may push switch incorrectly bad or damage lamps.   |
|                                   | Be careful that food is not block the ice passage.  |
|                                   | If foods are placed at the entrance of ice passage, ice may not be dispensed. The ice passage may also be covered with ice powder if splinter ice is used only. This time, remove the ice powder accumulated.   |
|                                   | Never store beverage cans or other foods in ice storage bin for the purpose of rapid cooling.   |
|                                   | Such actions may damage the automatic ice maker.  |
|                                   | Never use thin crystal glass or crockery to collect ice.  |
|                                   | Such glasses or containers may be broken.   |
|                                   | Put ice first into a glass before filling water or other beverages.   |
|                                   | Water may be splashed if ice is added to existing liquid in a glass.  |
|                                   | Never touch a hand or other tools on ice outlet.  |
|                                   | Touch may cause a part breakage or hand injury.   |
|                                   | Never remove the ice maker cover.   |
|                                   | Sometimes level the surface so that the ice storage bin is fully filled with ice.   |
|                                   | Ice is piled up just near the ice maker. So, such status may be considered, by the ice maker, that the ice storage bin is fully filled and ice making operation may stop.   |
|                                   | If discolored ice is dispensed, immediately contact service center, stopping use.   |
|                                   | Never use too narrow or deep glass.   |
|                                   | Ice may be jammed in ice passage and, thus, the refrigerator may be failed.   |
|                                   | Keep the glass at a proper distance from ice outlet.  |
| 6                                 | A glass too close to the outlet may hinder ice from coming out.   |
|                                   |   |

### No Plumbing Ice & Water (Applicable to some models only) You can use the water in the water tank or general water bottles to use the Auto Ice Maker function and Water Dispenser function without having to connect the water pipe to the refrigerator. When disassembling the water tank How to use Pull the fixed level and then hold the cap of the water tank as shown in 10 to separate the water tank ②. When filling water to the water tank Lift up the clamps on both sides to open the water tank cover, and then fill the water to the tank. After the tank is filled, close the tank cover and lock the clamps on both sides. Pour water up to the marked line (3ℓ) When assembling the water tank Adjust the top of the water tank cap and align the Pump tube with the center, and then push the tank in firmly. Use the 3 lever to keep 4 fixed. When using the When using the water bottle water bottle You can connect the cap to the general water bottle to use the water bottle, instead of the water tank provided. Turn the cap of the water tank in Open direction to open it. Open the water bottle and connect the cap. Only the water bottle of $1.5\ell \sim 2.0\ell(30 \sim 35 \text{ cm})$ can be used and there are some types that are not compatible. NOTE • When assembling or disassembling the water tank, be careful not to apply excessive force as it can damage the water tank. • If there is no water in the water tank, you will not be able to use the Auto Ice Maker function and Water Dispenser function. • Using other liquid besides water can cause problems to the pump. • When the water in the water tank is low, the size of the ice may be made smaller. • When you are refilling the water to the water tank, it is good to empty the water in the Dispenser initially. · The method of using the Dispenser and Ice Maker is the same as other common Dispenser models. • When using the water bottle instead of the water tank, do not throw away the water tank. · Because the water tank can get heavy, don't let children use or hold the water tank, especially with one hand. • 9~10 times per day you may hear some sound of operating water pump. 20

## Shelf (Applicable to some models only)

### **Folding Shelf**

You can store taller items such as a gallon container or bottles by simply pushing in front half of shelf underneath back half of shelf. Pull toward you to return to a full shelf.

# Wine holder (Applicable to some models only)

Wine holder adjustment (Type 1)

(Type 2)

### In case of inserting the wine holder :

**In case of separating the wine holder :** Pull the wine holder inward as in ④ after holding it upward as in ③ by catching it.

Bottles can be stored laterally with this wine rack.

### Egg box

### NOTE

- Never use the egg box as an ice storage bin. It can be broken.
- Never store the egg box in the freezer compartment or fresh compartment.

### Humidity control in the vegetable compartment

The humidity can be controlled by adjusting the humidity control switch to the left/right when storing vegetables or fruits.

#### High humidity

# Convert into a vegetable or meat compartment (Applicable to some models only)

• The bottom drawer in the refrigerator can be converted into a vegetable or meat compartment

The meat compartment maintains the temperature at a lower point than the refrigerator compartment so that meat or fish can be stored fresh longer.

#### NOTE

• Vegetables or fruits are frozen if the conversion switch is set to meats compartment. So, be sure to check it before storing foods.

| Operation                               |  |
|---|--|
|   | Deodorizer (Applicable to some models only)  |
|   | This system efficiently absorbs strong<br>odors by using the optical catalyst. This<br>system does hot have any affect on<br>stored food.<br>Deodorizing<br>system<br>Vegetable<br>compartment<br>Opti Temp Zone<br>(Optional)<br>/Fresh compartment<br>(Optional)   |
| How to use the<br>deodorizing<br>system | <ul> <li>Since it is installed already installed onto the cool air intake duct from the refrigerator compartment, you need no separate installation.</li> <li>Please use closed containers to store food with pungent odors. Otherwise, this oder can be absorbed by other food in the compartment.</li> </ul> |
|   | Vacuum Fresh (Applicable to some models only)  |
|   | It helps to keep the vegetables and fruits in the fresh condition with the vacuous effect improved the hermetical sealing.   |
| How to<br>use                           | <ul> <li>Pressing button makes the air inside the drawer out and<br/>it improves the hermetical sealing.</li> </ul>  |
|   | <ul> <li>Put the hand inside to lift the button up and pull forward to ①, then you can open ② Drawer.</li> <li>When closing drawer, push it until you hear clicking.</li> </ul>  |

### **Opti Temp Zone Temperature Transition Corner** (Applicable to some models only)

By pressing the button, store vegetables, fruits or other types of food such as meat to be defrosted, raw fish, etc.

# Temperature Change at Opti Temp Zone (Applicable to some models only)

### Method to Use

You can select optimum temperature range depending on types of foods stored.

- 3-step of temperature selection including -3°C, -1°C and 4°C is available. Vegetables/fruits and cold storage foods requiring humidity maintenance and meats/fishes can

be more freshly stored depending on type of foods stored.

- When using the Opti Temp Zone as storage room of meats, storing vegetables or fruits may be frozen
- When using the Opti Temp Zone as storage room of meats, keeping meats or fishes may be spoiled and thus meats or fishes must be kept at the F-room.
- If opening a door of the R-room, lamp turns on in the selected status and lamp turns off if closing it.
- (Vegetable/Fruit) → (Cold storage while maintaining humidity) → (Meat) is sequentially repeated whenever pressing the "Selection" button.

# **Opti Temp Zone (Applicable to some models only)**

When removing Opti Temp Zone
First, remove the vegetable bin.
After lifting the Opti Temp Zone case slightly ①, reach inside and pull it outward ②.
When installing Opti Temp Zone
Fit the Opti Temp Zone case on to the ledge ① and gently slide it in ②.
When forced, the connecting parts can be damaged.

|                          | Storing foods  |
|--------------------------|--|
|                          | <ul> <li>Store fresh food in the refrigerator compartment. How food is frozen and thawed is an<br/>important factor in maintaining its freshness and flavor.</li> </ul>  |
|                          | <ul> <li>Do not store food which goes bad easily at low temperatures, such as bananas, and<br/>melons.</li> </ul>  |
|                          | <ul> <li>Allow hot food to cool prior to storing, placing hot food in the refrigerator could spoil other food, and lead to higher energy consumption.</li> </ul>   |
|                          | <ul> <li>When storing the food, cover it with vinyl wrap or store in a container with a lid. This prevents moisture from evaporating, and helps food to keep its taste and nutrients.</li> </ul>   |
|                          | <ul> <li>Do not block air vents with food. Smooth circulation of chilled air keeps refrigerator<br/>temperatures even.</li> </ul>  |
|                          | <ul> <li>Do not open the door frequently. Opening the door lets warm air enter the refrigerator,<br/>and cause temperatures to rise.</li> </ul>  |
|                          | <ul> <li>Never keep too much food in door rack because they may push against by inner racks<br/>so that the door cannot be fully closed.</li> </ul>  |
| Freezer<br>compartment   | <ul> <li>Do not store bottles in the freezer compartment - they may break when frozen.</li> <li>Do not refreeze food that has been thawed. This causes loss of taste and nutrient.</li> <li>When storing frozen food like ice cream for a long period, place it on the freezer shelf, not in the door rack.</li> </ul> |
|                          | <ul> <li>Do not touch the cold foods or containers- especially made of metallic -, with wet hands and place glass products in the freezer compartment.</li> </ul>  |
|                          | - That's why you may have chilblains and they may be broken when their inner matters are frozen, causing personal injury.  |
| Refrigerator compartment | <ul> <li>Avoid placing moist food in top refrigerator shelves, it could freeze from direct<br/>contact with chilled air.</li> </ul>  |
|                          | <ul> <li>Always clean food prior to refrigeration. Vegetables and fruits should be washed and<br/>wiped, and packed food should be wiped, to prevent adjacent food from spoiling.</li> </ul>   |
|                          | <ul> <li>When storing eggs in their storage rack or box, ensure that they are fresh, and always<br/>store them in an upright position, which keeps them fresh longer.</li> </ul>   |
|                          | NOTE   |
|                          | <ul> <li>If you keep the refrigerator in a hot and humid place, frequent openning of the door<br/>or storing a lot of vegetables in it may cause dew to form which has no effect on its<br/>performance. Remove the dew with dust cloth free from care.</li> </ul>   |
|                          |  |
|                          |  |

| temperatures.  |               |                                       | Clean or change gasket. Leaks in the<br>door seal will cause refrigerator to run<br>longer in order to maintain desired<br>temperatures. |
|  |               |                                       | This is normal. Refrigerator goes on and off to keep the temperature constant.   |

| Occurrence  | Possible cause  | Solution   |
|---|---|--|
| Refrigerator<br>compressor<br>does not run.   | Thermostat is keeping the refrigerator at a constant temperature.   | This is normal. The refrigerator goes on and off to keep the temperature constant.   |
| Temperatures are too cold   |   |  |
| Temperature in the<br>freezer is too cold<br>but the refrigerator<br>temperature is<br>satisfactory.    | Freezer control is set too cold   | Set the freezer control to a warmer setting until the freezer temperature is satisfactory.                                       |
| Temperature in the<br>refrigerator is too<br>cold and the freezer<br>temperature<br>is satisfactory.    | Refrigerator control is set too cold.   | Set the refrigerator control to a warmer setting   |
| Food stored in drawers freezes.   | Refrigerator control is set too cold.   | See above solution.  |
| Meat stored in<br>fresh meat<br>drawer freezes.   | Meat should be stored at a temperature just below the freezing point of water (32°F, 0°C) for maximum fresh storage time. | It is normal for ice crystals to form due to the moisture content of meat.   |
| Temperatures<br>are too warm  |   |  |
| Temperatures in<br>the refrigerator<br>or freezer are<br>too warm.                                      | Freezer control is set too warm.  | Set the freezer or refrigerator control to<br>a colder setting until the freezer or<br>refrigerator temperature is satisfactory. |
| too warm.   | Refrigerator control is set too warm.<br>Refrigerator control has some effect on freezer temperature.                     | Set the freezer or refrigerator control to a colder setting until the freezer or refrigerator temperature is satisfactory.       |
|   | Doors are opened too frequently or too long.  | Warm air enters the refrigerator/ freezer<br>whenever the door is opened.<br>Open the door less often.                           |
|   | Door is slightly open.  | Close the door completely.   |
|   | Large amounts of warm or hot food may have been stored recently.  | Wait until the refrigerator or freezer has a chance to reach its selected temperature.   |
| -   | Refrigerator has recently been disconnected for a period of time.   | A refrigerator requires some hours to cool down completely.  |
| Temperature in the<br>refrigerator<br>is too warm but<br>the freezer<br>temperature is<br>satisfactory. | Refrigerator control is set too warm.   | Set the refrigerator control to a colder setting.  |

| Occurrence   | Possible cause   | Solution   |
|--|--|--|
| Sound and noise  |  |  |
| Louder sound<br>levels when<br>refrigerator is on.                           | Today's refrigerators have increased storage capacity and maintain more even temperatures.                       | It is normal for sound levels to be higher.  |
| Louder sound<br>levels when<br>compressor<br>comes on.                       | Refrigerator operates at higher pressures during the start of the ON cycle.                                      | This is normal. The sound will level off as the refrigerator continues to run.   |
| Vibrating or rattling noise.   | Floor is uneven or weak.<br>Refrigerator rocks on the floor when it is<br>moved slightly.                        | Be sure floor is level and solid and can adequately support refrigerator.  |
|  | Items placed on the top of the refrigerator are vibrating.   | Remove items.  |
|  | Dishes are vibrating on the shelves in the refrigerator.   | It is normal for dishes to vibrate slightly.<br>Move dishes slightly.<br>Make sure refrigerator is level and firmly<br>set on floor. |
|  | Refrigerator is touching wall or cabinets.   | Move refrigerator so that it does not touch the wall or refrigerator.  |
| Water/Moisture<br>/Ice inside<br>refrigerator                                |  |  |
| Moisture collects<br>on the inside walls<br>of the refrigerator.             | The weather is hot and humid which increases the rate of frost buildup and internal sweating.                    | This is normal.  |
|  | Door is slightly open.   | See problem section opening/closing of doors.  |
|  | Door is opened too often or too long.  | Open the door less often.  |
| Water/Moisture<br>/Ice outside<br>refrigerator                               |  |  |
| Moisture forms<br>on the outside of<br>the refrigerator<br>or between doors. | Weather is humid.  | This is normal in humid weather.<br>When humidity is lower, the moisture should disappear.   |
|  | Door is slightly open,causing cold air<br>from the inside the refrigerator to meet<br>warm air from the outside. | This time, close the door completely.  |
| 3  | 2  |  |

| Occurrence                          | Possible cause  | Solution  |
|-------------------------------------|---|---|
| Odors in refrigerator               |   |   |
|                                     | Interior needs to be cleaned.   | Clean interior with sponge,warm water<br>and baking soda.   |
|                                     | Food with strong odor is in the refrigerator.   | Cover food completely.  |
| -                                   | Some containers and wrapping materials produce odors.                                     | Use a different container or brand of wrapping materials.   |
| Opening/Closing of<br>doors/Drawers |   |   |
| Door(s) will not close.             | Food package is keeping door open.  | Move packages that keep door from closing.  |
| Door(s) will not close.             | Door was closed too hard, causing other door to open slightly.                            | Close both doors gently.  |
| -                                   | Refrigerator is not level. It rocks on the floor when it is moved slightly.               | Adjust the height adjusting screw.  |
| -                                   | Floor is uneven or weak.<br>Refrigerator rocks on the floor when it<br>is moved slightly. | Be sure floor is level and can adequately<br>support refrigerator.<br>Contact carpenter to correct sagging of<br>sloping floor.                         |
| -                                   | Refrigerator is touching wall or cabinets.  | Move refrigerator   |
| Drawers are difficult to move.      | Food is touching shelf on top of the drawer   | Keep less food in drawer.   |
| -                                   | Track that drawer slides on is dirty.   | Clean drawer and track.   |
| Dispenser                           |   |   |
| Dispenser will not<br>dispense ice  | lce storage bin is empty.   | When the first supply of ice is dropped into the bin, the dispenser should operate  |
| ~                                   | Freezer temperature is set too warm.  | Turn the freezer control to a highe<br>setting so that ice cubes will be made.<br>When the first supply of ice is made<br>the dispenser should operate. |
| -                                   | Household water line valve is not open.   | Open household water line valve and<br>allow sufficient time for ice to be made.<br>When ice is made, dispenser should<br>operate.                      |
| -                                   | Refrigerator or freezer door is not closed.   | Be sure both doors are closed.  |

| Occurrence                                | Possible cause Solution  |  |
|---|--|--|
|   |  |  |
| Dispenser will<br>not dispense<br>ice.    | Ice has melted and frozen around auger<br>due to infrequent use, temperature<br>fluctuations and/or power outrages.                            | Remove ice storage bin, and thaw and<br>the contents. Clean bin, wipe dry and<br>replace in proper position.<br>When new ice is made, dispenser should<br>operate. |
| Ice dispenser<br>is jammed.               | Ice cubes are jammed between the ice maker arm and back of the bin.  | Remove the ice cubes that are jamming the dispenser.   |
|   | Ice cubes are frozen together.   | Use the dispenser often so that cubes do not freeze together.  |
|   | Ice cubes that have been purchased or<br>made in some other way have been<br>used in the dispenser.  | Only the ice cubes made by the ice maker should be used with the dispenser.  |
| Dispenser will<br>not dispense<br>water.  | Household water line valve is not open.<br>See problem "Ice maker is not making<br>any ice."   | Open household water line valve.   |
|   | Refrigerator or freezer door is not closed.  | Be sure both doors are closed.   |
| Water has an<br>odd taste<br>and/or odor. | Water has been in the tank for too long.   | Draw and discard 7 glasses of water<br>to freshen the supply. Draw and discard<br>an additional 7 glasses to completely rinse<br>out tank.                         |
|   | Unit not properly connected to cold water line.  | Connect unit to cold water line which supplies water to kitchen faucet.  |
| Sound of ice<br>dropping                  | This sound is normally made when automatically made ice is dropped into ice storage bin. Volume may vary according to refrigerator's location. |  |
| Sound of water supply                     | This sound is normally made when ice maker is supplied with water after dropping the automatically made ice.                                   |  |
| Other                                     | Please thoroughly read 'Automatic ice maker and dispenser' in this manual.   |  |

34

#### **DISPOSAL OF YOUR OLD APPLIANCE**

- 1. When this crossed-out wheeled bin symbol is attached to a product it means the product is covered by the European Directive 2002/96/EC.
- All electrical and electronic products should be disposed of separately from the municipal waste stream via designated collection facilities appointed by the government or the local authorities.
- 3. The correct disposal of your old appliance will help prevent potential negative consequences for the environment and human health.
- 4. For more detailed information about disposal of your old appliance, please contact your city office, waste disposal service or the shop where you purchased the product.

This product contains fluorinated greenhouse gases covered by the Kyoto Protocol.

 Information of fluorinated greenhouse gases used as refrigerant of this refrigerator.

| Chemical name | Composition of Gases | Total GWP (kg CO2-eq) |
|---------------|----------------------|-----------------------|
| R-134a        | 100% HFC-134a        | 1300                  |
