Please note that this information is for proper use and safety of the equipment. The following symbols may indicate a hazardous situation in which, if not heeded, may result in serious injury or even death to the user or others, or damage to the equipment.

⚠️ **WARNING**

- Indicates warning and safety instructions. If not adhered to, it could result in death or serious injury to the user or others.

⚠️ **CAUTION**

- Indicates a hazardous situation which, if not heeded, may result in minor or moderate injury to the user or others, or damage to the equipment.

ON CLEANING

Recommended Cleaning Chemicals

- Isopropanol 70 %
- Ethanol 70 %
- 0.9 % NaCl solution
- Biospot 500 ppm

How to Use Cleaner

- Prior to cleaning, turn off the monitor and remove the power cable.
- Slightly dampen a soft non-abrasive cloth with a recommended cleaner, then lightly rub the screen with no more than 1 N of force.
- The cleaner could cause serious damage if it leaks inside the monitor while cleaning.
- Do not use benzene, thinner, acids or alkaline cleaners or other such solvents.
- The screen should only be cleaned by authorized personnel, using the above guidelines.
- Visually inspect the product for any contamination after cleaning. If contamination remains, repeat the cleaning process.
- If discolouration/cracks appear after cleaning, discontinue use and contact the manufacturer.
- Ensure lighting is adequate during the cleaning process.

8	**USB IN 5 V ⎓ 0.5 A / USB UP** • Used for HW Calibrator (Optional Accessory) connection. • Connect peripheral device to the USB input port. • A keyboard, mouse, or USB storage device can be connected. • To use USB 2.0, connect the A-B type USB 2.0 cable to the PC. ⚠ **CAUTION** Cautions When Using a USB Storage Device • A USB storage device which has a built-in automatic recognition program or uses its own driver might not be recognizable. • Some USB storage devices may not be supported or may not work properly. • It is recommended to use a USB hub or hard disk drive with power supplied. (If the power supplied is not enough, the USB device may not be detected properly.)
9	**SERVICE ONLY** – This USB port is used only for service.

🛈 **NOTE**
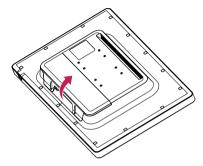

• All signal out terminals (SDI, DVI, etc.) output a signal when the power switch of the monitor is on. When the power switch is off, no signal is outputted.
• This monitor supports the *Plug and Play feature.

* Plug and Play: A feature that allows you to add a device to your computer without the need for physical device configuration or user intervention.
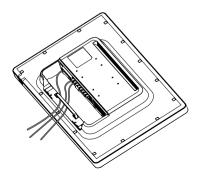

Installing the Monitor

Cable connection and organize

Before connecting the connectors, remove the back door as shown below.
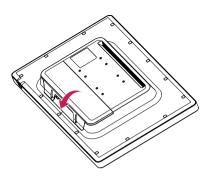

1 Once the screws are removed, lift the back door in the direction of the arrow below to remove it. The back door is held in place with a magnet.

2 After installing the cables, tidy them up using the cable holders.

3 Once the back door is attached, assemble it using the screws.
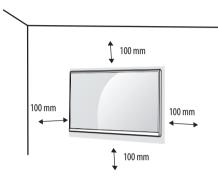

⚠ CAUTION
• When the back door is attached to the monitor, the monitor meets water resistance standards. Do not use the monitor with the back door detached, as the water resistance capability is not guaranteed without the door.
• Only fix the back door with screws when the potential equalization conductor is not connected. When the potential equalization conductor is connected, don't fix the back door with screws (you can cover the back door with a magnet only).

Installing on the Wall

Install the monitor at least 100 mm away from the wall on each side of the monitor to ensure sufficient ventilation. Detailed installation instructions can be obtained from your local dealer. Please refer to the manual to install and set up a tilting wall mounting bracket.

To install the monitor to a wall, attach a wall mount plate (optional) to the back of the monitor.

Make sure that the wall mount plate (optional) is securely fixed to the monitor and to the wall.

Installing the Wall Mount Plate

This monitor meets the specifications for the wall mount plate or other compatible devices.
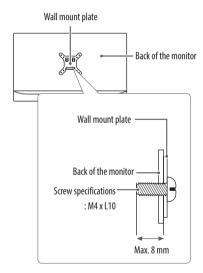

Wall Mount (mm)	100 x 100
Standard screw	M4 x L10
Required screws	4
Wall mount plate (optional)	LSW140

⚠ NOTE
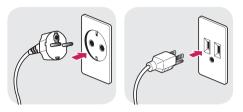

• A non-VESA standard screw may damage the product and cause the monitor to fall. LG Electronics is not liable for any accidents relating to the use of non-standard screws.
• The wall mount kit includes the installation guide and all necessary parts.
• The wall mounting bracket is optional. You can obtain optional accessories from your local dealer.
• The length of the screw may differ for each wall mounting bracket. If you use screws longer than the standard length, it may damage the inside of the product.
• For more information, please refer to the user manual for the wall mounting bracket.
• Be careful not to apply too much force while mounting the wall mount plate as it may cause damage to the screen.
• Remove the stand before installing the monitor on a wall mount by performing the stand attachment in reverse.

⚠ CAUTION

• Disconnect the power cord before moving or installing the monitor. There is risk of electric shock.
• Installing the monitor on the ceiling or on a slanted wall may result in the monitor falling off, which could lead to injury. Use an authorized LG wall mount and contact the local dealer or qualified personnel.
• To prevent injury, this apparatus must be securely attached to the wall in accordance with the installation instructions.
• Applying excessive force when tightening screws may damage the monitor. Such damage is not covered by the product warranty.
• Use the wall mounting bracket and screws that confirm to VESA standards. Damage caused by the use or misuse of inappropriate components is not covered by the product warranty.
• When measured from the back of the monitor, the length of each installed screw must be 8 mm or less.

[All Settings] > [Picture]			Explanation
[Picture Adjust]	[Brightness]		Adjusts screen brightness. **⊘ NOTE** • Press the ▼ button to toggle between [Turn on 'Brightness Stabilization']/[Turn off 'Brightness Stabilization']. • When [Brightness Stabilization] is [On], the [Brightness] adjustment function is deactivated. • When [Brightness Stabilization] is [On], [SMART ENERGY SAVING] and [DFC] functions are deactivated. • When [Picture Mode] is set as [DICOM], or [Gamma] is set as [DICOM Gamma Curve] Setting, the [Brightness] adjustment function is deactivated.
	[Contrast]		Adjusts the color contrast of the screen.
	[Sharpness]		Adjusts the sharpness of the screen.
	[Brightness Stabilization]		Maintains the brightness configured of the screen.
		[On]	Automatically adjusts brightness.
		[Off]	Deactivates the applicable function and the user can adjust the brightness.
	[SUPER RESOLUTION+]	[High]	Select this option for crystal clear images.
		[Middle]	The optimized picture quality is displayed when a user wants images between low and high modes for comfortable viewing.
		[Low]	The optimized picture quality is displayed when a user wants smooth and natural images.
		[Off]	Select this option for the normal user experience. Deactivates the [SUPER RESOLUTION+] function.
	[Black Level]		Sets up the offset level. (HDMI only) • Offset: as a reference for a video signal, this is the darkest color the monitor can display.
		[High]	Maintains the current screen contrast range.
		[Low]	Reduces the black levels and increases the white levels of the current screen contrast range.

[All Settings] > [Picture]		Explanation		
[Picture Adjust]	[DFC]	[On]	Automatically adjusts brightness depending on the screen.	
		[Off]	Deactivates the [DFC] function.	
	[Response Time]	Sets a response time for displayed pictures based on the movement of the picture on the screen.		
		In a normal environment, it is recommended that you set [Fast]. For images with a lot of motion, it is recommended that you set [Faster]. But, when [Faster] is set, it may cause an afterimage.		
		[Faster]	Sets the response time to Faster.	
		[Fast]	Sets the response time to Fast.	
		[Normal]	Sets the response time to Normal.	
		[Off]	Does not use the response time improvement feature.	
	[Black Stabilizer]	Adjusts the black level to clearly see objects on a dark screen.		
		Increasing the [Black Stabilizer] value brightens the low grey levels on the screen. (You can easily distinguish objects on a dark game screen.)		
		Reducing the [Black Stabilizer] value darkens the low grey levels and increases the dynamic contrast on the screen.		
	[Uniformity]	Automatically adjusts the brightness uniformity of the screen.		
		🛈 NOTE		
		• If [Uniformity] is activated, the screen may become darker.		
		[On]	Activates the [Uniformity] function.	
		[Off]	Deactivates the [Uniformity] function.	

[All Settings] > [Picture]		Explanation	
[Color Adjust]	[Gamma]	Set your own gamma value. ([Gamma 1.8], [Gamma 2.0], [Gamma 2.2], [Gamma 2.4], [Gamma 2.6], [DICOM Gamma Curve])	
		Higher gamma settings mean a darker image is displayed or vice versa.	
	[Color Gamut]	Selects the [Color Gamut]. • The colour gamut of the output signal can be set to [Auto], [REC709], [REC2020] or [Off]. • The colour gamut can be changed when the picture mode of the monitor is set to [Custom]. • When [Auto] is selected, the colour gamut is set to [REC2020] if the input resolution is 3840 x 2160, and to [REC709] for all other resolutions.	
	[Color Temp]	Set your own color temperature. ([Custom], [6500K], [7500K], [9300K], [Manual])	
		[Custom]	Users can customize the red, green and blue colors.
		[6500K]	Indicates the screen color with a 6500K red color temperature.
		[7500K]	Sets the screen color between red and blue with a 7500K color temperature.
		[9300K]	Indicates the screen color with 9300K blue color temperature.
		[Manual]	Adjusts the color temperature in 500K increments. (However, supports 9300K instead of 9500K)
	[Red]	You can customize the picture color using red, green and blue colors.	
	[Green]		
	[Blue]		
	[Six Color]	Meets the user requirements for colors by adjusting the hue and saturation of the six colors (red, green, blue, cyan, magenta and yellow) and then saving the settings.	
		Hue	Adjusts the tint of the screen colors.
		Saturation	The lower the screen's color sharpness value, the less sharper and brighter the colors become. The higher the value, the sharper and darker the colors become.
[Picture Reset]	Returns color to the default settings.

	[Save User Settings]	Saves the current picture quality settings in the corresponding User Preset. Preset 1 ~ Preset 3 are factory-set values as samples and the user can change the values. • Preset 1: Use this preset for bluish color. • Preset 2: Use this preset for greenish color and brighter low-gradation. • Preset 3: Use this preset to soften the red tone. • User 1 ~ User 7: Initial values are the same as the factory settings.
	[Default User Settings]	Loads the initial basic picture settings.
	[User Preset Reset]	Initializes User Preset settings. • Initializes the existing user name and user settings to be restored to factory settings (Preset 1 ~ Preset 3, User 1 ~ User 7).
[Auto Screen Off]		Automatically turns off the screen when there is no monitor signal for a set time period.
	[On]	Activates [Auto Screen Off] function.
	[Off]	Deactivates [Auto Screen Off] function.
[HW Calibration]		[RS-232C] and the [HW Calibration] cannot be used at the same time.
	[On]	The HW Calibration function will operate.
	[Off]	The HW Calibration function will be turned off.
[RS-232C]		[RS-232C] and the [HW Calibration] cannot be used at the same time.
	[RS-232C]	The [RS-232C] function will be operated or turned off.
	[Set ID]	Adjusts [Set ID]. (The scope of adjustment: 1-10)

[All Settings] > [General]	Explanation
[DisplayPort 1.2]	Enables or disables [DisplayPort 1.2]. 🛈 **NOTE** • Be sure to configure this option according to the DisplayPort version supported by your graphics card. If the graphics card is not compatible set to [Disable]. • The graphics card's 10 bit display cannot be used when [DisplayPort 1.2] is disabled.
[HDMI ULTRA HD Deep Color]	Provides sharper images when connected to a device supporting ULTRA HD Deep Color. 🛈 **NOTE** • If the connected device does not support Deep Color, the screen or sound may not work properly. In this case, set this function to off. • To use [HDMI ULTRA HD Deep Color], turn this function on.
[OSD Lock]	A function for restricting menu configuration and adjustment. | [On] | Turns on [OSD Lock]. | | [Off] | Turns off [OSD Lock]. | 🛈 **NOTE** • Deactivates all functions except the [Quick Settings] menu and [Input] menu's [Input List], [SDI Mode], [Aspect Ratio], [PBP / PIP], [Screen Flip] functions, [Failover Input Switch], and the [General] menu's [OSD Lock] and [Information] functions.
[Information]	The following display information will be shown; [Total Power On Time], [Resolution].
[Reset to Initial Settings]	[Do you want to reset your settings?] | [Yes] | Restores the screen settings to the default settings when your monitor was first purchased. | | [No] | Cancels the selection. |

TROUBLESHOOTING

Nothing is displayed on the screen.

Problem	Action
Is the monitor's power cord plugged in?	• Check if the power cord is correctly plugged into the power outlet.
Is the power indicator on?	• Check the power cable connection and turn on the power switch.
Is the power indicator displaying as green?	• Check if the input setting is correct. (Menu ▓▓ > [All Settings] > [Input])
Is the [Out of Range] message being displayed?	• This occurs when signals transferred from the PC (graphics card) are out of the horizontal or vertical frequency range of the monitor. Please see the <PRODUCT SPECIFICATIONS> section of this manual to set the appropriate frequency.
Is the [No Signal] message displayed?	• This is displayed when the signal cable between the PC and the monitor is missing or disconnected. Check the cable and reconnect it.

The screen retains an image.

Problem	Action
Does image sticking occur even when the monitor is turned off?	• Displaying a still image for a prolonged time may cause damage to the screen, resulting in the retention of the image. • To extend the lifetime of the monitor, use a screensaver.

The screen is unstable and shakes. / There are shadowy traces left on the screen.

Problem	Action
Did you select the appropriate resolution?	• If the selected resolution is HDMI 1080i 60/50 Hz (interlaced), the screen may be flickering. Change the resolution to 1080p or the recommended resolution.

The display color is abnormal.

Problem	Action
Does the display appear discolored (16 colors)?	• Set the number of colors to 24 bit (true colors) or higher: In Windows Control Panel > Display > Settings > Color Quality (May differ depending on your operating system.)
Does the display color appear unstable or monochrome?	• Check if the signal cable is connected properly. Reconnect the cable or reinsert the PC's graphics card.
Are there spots on the screen?	• When using the monitor, pixilated spots (red, green, blue, white or black) may appear on the screen. This is normal for an LCD screen. It is not an error, nor is it related to the monitor's performance.

⚠ NOTE

- Vertical Frequency: In order to display an image, the screen must be refreshed dozens of times per second, like a fluorescent lamp. The number of times the screen is refreshed per second is called vertical frequency, or refresh rate, and is represented by Hz.
- Horizontal Frequency: The time it takes to display one horizontal line is called the horizontal cycle. If 1 is divided by the horizontal interval, the result is the number of horizontal lines displayed per second. This is called horizontal frequency and is represented by kHz.
- Check if the graphics card's resolution or frequency is within the range allowed by the monitor and in Windows set it to the recommended (optimal) resolution in Control Panel > Display > Settings. (May differ depending on your operating system (OS).)
- Not setting the video card to the recommended (optimal) resolution may result in blurred text, a dimmed screen, a truncated display area or misalignment of the display.
- The setting methods may be different depending on the computer or operating system, and some resolutions may not be available depending on the performance of the graphics card. If this is the case, contact the manufacturer of the computer or graphics card for assistance.
- Normal graphics cards do not support 3840 x 2160 resolution. If the resolution cannot be displayed, contact the manufacturer of your graphics card.
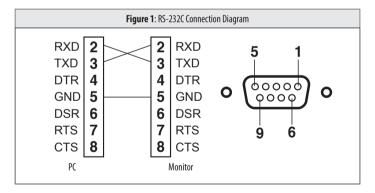

EXTERNAL CONTROLLER SETUP

The actual product may differ from the picture shown.

Connect the RS-232C (serial connector) of the PC to the RS-232C IN connector at the back of the monitor.

Purchase a cable to connect the RS-232C connectors, as the cable is not provided as an accessory.

Use an RS-232C cable to remotely control the monitor (see Figure 1).

Set ID Function

This function allows you to assign a unique ID to the monitor to control it remotely from your PC.

Please refer to the "Transmission/Reception Protocol".

1 Press the (Menu⚏) button and select [All Settings] > [General] > [RS-232C].

2 Set [RS-232C] to [On].

3 Use the ◀, ▶, ▼, ▲ buttons to select [Set ID]. Then press the (OK ◎) button.

4 Select a [Set ID] to assign. Then press the (OK ◎) button. The [Set ID] can be a value from 1 to 10.

5 In order to exit from the OSD Menu, press the LED Control Button (Menu⚏) or press (◀Brightness).

Communication Parameters

- Baud rate: 9600 bps (UART)
- Data length: 8 bits
- Parity bit: None
- Stop bit: 1 bit
- Communication code: ASCII code
- Crossed (reverse) cable used.

Transmission/Reception Protocol

Transmission

(Command1)(Command2)( )(Set ID)( )(Data)(Cr)

(Command 1): j, k, m, x, t, f, d

(Command 2): This command is used to control the monitor.

(Set ID): Used to identify the monitor being controlled. (Set ID) can be assigned to each monitor under [General] in the Settings Menu.

A value from 1 to 10 can be assigned. By selecting '0' for the (Set ID) value in the protocol format, you can control all connected monitors.

* The value is displayed as base 10 on the OSD menu and used as base 16 (0x00 - 0x63) in the transmission/reception protocol for remote control.

(Data): Transmits a setting value (Data) required for the command described previously. (base 16)

When the Data 'FF' is sent, the setting value corresponding to the specific command is read (Data read mode).

(Cr): Carriage return, which is '0x0D' in ASCII code.

( ): Space, which is '0x20' in ASCII code.

OK Acknowledgment

(Command2)( )(Set ID)( )(OK)(Data)(x)

When the Data has been successfully received, the monitor sends an ACK response signal in the above format. The Data showing the current state is received in the Data read mode. The Data from the PC is simply returned in the Data write mode.

Error Acknowledgment

(Command2)( )(Set ID)( )(NG)(Data)(x)

When the set receives an abnormal piece of Data for an unsupported function or there is a communication error, it returns ACK in the format above.

Data 00: Illegal code

PREVENTIVE MAINTENANCE PLAN – RECOMMENDATION

Annual:

- Perform Electrical Safety test
- Perform QA task according to local Radiologic Regulation
- Recommended annual QA procedure

Procedure	Interval
Viewing Condition Check and Setting	Annually
Display Calibration	Annually
Image Quality Check - SMPTE Pattern	Annually

Regularly, e.g. once per Month:

- Check the integrity of the power cord and inspect its routing, so that it is not under the risk of being punched or cut.
- Check the integrity of the protective earth connection
- Check and cleaning for contamination of ventilation opening on rear housing.
- To keep the optimal viewing conditions of LCD PANEL, periodically check that it is correctly operation

Procedure	Interval
Cleaning Display	Monthly
Viewing Condition	Monthly
Image Quality Check - SMPTE Pattern	Monthly

Daily:

- To maintain the screen, clean by keeping the display screen free from any objects (dust, finger print, etc.) of the display (Recommended equipment: Lint free cloth.)
- Check housing for physical Damage
- Check cabling for Damage and trip hazard
- Perform visual check to verify Display Performance
