

Introduction

The 885LE Flat Panel Monitor has an active matrix TFT (Thin-Film Transistor) LCD (Liquid Crystal Display).

This monitor is designed for use in small working areas or for those who need more working space on the desk.

Features

- The 885LE is a 18.1-inch (18.1 inches viewable) intelligent microprocessor based monitor.
- The monitor has two signal connectors (D-sub and DVI-D) so that it can support both an existing analog input (D-sub) and an advanced standard digital input (DVI-D). Two computers can be simultaneously used while connected to this monitor.
- We accomplished to adapt the advanced design and technology to the monitor. Soft touch buttons on the front panel are simple and allow you to conveniently adjust a variety of image controls. The absolute flat screen and screen surface treatment eliminate distracting glares.
- USB (Universal Serial Bus) ports at the back of the monitor are prepared for the USB cable and hub. You can easily and flexibly connect USB-designed devices-such as a mouse, keyboard or printer- to the monitor for true Plug and Play function.
- Digitally controlled auto-scanning is done with the micro-processor for horizontal scan frequencies between 30 and 80kHz, and vertical scan frequencies between 56 - 85Hz. The microprocessor-based intelligence allows the monitor to operate in each frequency mode with the precision of a fixed frequency monitor.
- It supports resolutions up to 1280x1024, and has a wide viewing angle of ± 80 degrees horizontal and ± 80 degrees vertical.
- For greater user health and safety, this monitor complies with the stringent Swedish TCO'99 requirements for low radiation emissions.
- For low cost of monitor operation, this monitor is certified as meeting the EPA Energy Star requirements, and utilizes the VESA Display Power Management Signalling (DPMS) protocol for power saving during non-use periods.

Monitor Registration

The model and serial numbers are found on the rear of this unit. These numbers are unique to this unit and not available to others. You should record requested information here and retain this guide as a permanent record of your purchase. Staple your receipt here.

Date of Purchase : _____
Dealer Purchased From : _____
Dealer Address : _____
Dealer Phone No. : _____
Model No. : _____
Serial No. : _____

Important Precautions

This unit has been engineered and manufactured to assure your personal safety, but improper use can result in potential electrical shock or fire hazard. In order not to defeat the safeguards incorporated in this monitor, observe the following basic rules for its installation, use, and servicing. Also follow all warnings and instructions marked directly on your monitor.

On Safety

Use only the power cord supplied with the unit. In case you use another power cord, make sure that it is certified by the applicable national standards if not being provided by the supplier. If the power cable is faulty in any way, please contact the manufacturer or the nearest authorized repair service provider for a replacement.

Operate the monitor only from a power source indicated in the specifications of this manual or listed on the monitor. If you are not sure what type of power supply you have in your home, consult with your dealer.

Overloaded AC outlets and extension cords are dangerous. So are frayed power cords and broken plugs. They may result in a shock or fire hazard. Call your service technician for replacement.

Do not Open the Monitor.

- There are no user serviceable components inside.
- There are Dangerous High Voltages inside, even when the power is OFF.
- Contact your dealer if the monitor is not operating properly.

To Avoid Personal Injury :

- Do not place the monitor on a sloping shelf unless properly secured.
- Use only a stand recommended by the manufacturer.
- Do not try to roll a stand with small casters across thresholds or deep pile carpets.

To Prevent Fire or Hazards:

- Always turn the monitor OFF if you leave the room for more than a short period of time. Never leave the monitor ON when leaving the house.
- Keep children from dropping or pushing objects into the monitor's cabinet openings. Some internal parts carry hazardous voltages.
- Do not add accessories that have not been designed for this monitor.
- During a lightning storm or when the monitor is to be left unattended for an extended period of time, unplug it from the wall outlet.
- Do not bring magnetic devices such as magnets or motors near the picture tube.

On Installation

Important Precautions

Do not allow anything to rest upon or roll over the power cord, and do not place the monitor where the power cord is subject to damage.

Do not use this monitor near water such as near a bathtub, washbowl, kitchen sink, laundry tub, in a wet basement, or near a swimming pool.

Monitors are provided with ventilation openings in the cabinet to allow the release of heat generated during operation. If these openings are blocked, built-up heat can cause failures which may result in a fire hazard.

Therefore, NEVER:

- Block the bottom ventilation slots by placing the monitor on a bed, sofa, rug, etc.
- Place the monitor in a built-in enclosure unless proper ventilation is provided.
- Cover the openings with cloth or other material.
- Place the monitor near or over a radiator or heat source.

Do not rub or strike the Active Matrix LCD with anything hard as this may scratch, mar, or damage the Active Matrix LCD permanently.

Do not press the LCD screen with your finger for a long time as this may incur some afterimages.

Some dot defects may appear on the screen, like Red, Green or Blue spots on the screen. However, this will have no impact or effect on the monitor performance.

If possible, use the VESA 1280x1024 @60Hz video mode to obtain the best image quality for your LCD monitor. If used under any modes except the VESA 1280x1024 @60Hz video mode, some scaled or processed images may appear on the screen. However, this is the characteristics of the LCD panel which has a fixed resolution of 1280x1024 at 60Hz.

On Cleaning

- Unplug the monitor before cleaning the face of the LCD screen.
- Dust the monitor by wiping the screen and the cabinet with a soft, clean cloth. If the screen requires additional cleaning, use a clean, damp cloth.
- Do not use liquid cleaners or aerosol cleaners.

On Repacking

- Do not throw away the carton and packing materials. They make an ideal container in which to transport the unit. When shipping the unit to another location, repack it in its original material.

Connecting the Monitor

To set up the monitor, ensure that the power is turned off to the monitor, computer system, and other attached devices, then follow these steps:

1. Place the monitor in a convenient, well-ventilated location near your computer.
2. Remove the stand cover of the monitor to connect the cables.
3. Connect the signal cable.

- When connecting the DVI-D signal cable**Figure 1**

Connect the end of monitor signal cable to the port on the rear panel of the monitor through the slot and cable holder on Stand. ● Connect the other end to the DVI port on the rear panel of the computer and tighten the screws. ●

- When connecting the Dsub signal cable

PC **Figure 2**

Connect one end of the monitor signal cable to either of the connectors ● on the rear panel of the monitor. Connect the other end to the Dsub port on the rear panel of the computer and tighten the screws. ●

MAC **Figure 3**

Connect one end of the monitor signal cable to either of the connectors ● on the rear panel of the monitor. Connect the other end of the monitor signal cable to the rear panel of Macintosh computer through a Macintosh adapter and then tighten screws. ●

4. Connect the plug from the AC adapter into the back of the monitor. ●

Figure 1

Connecting the Monitor

Figure 2

Figure 3

NOTE

- The figure3 shows the connection to an Apple Macintosh, using a separately purchased adapter. For more information on adapter requirements, contact your authorized dealer, reseller, or service provider.

5. Connect one end of the AC power cord to the AC adapter ● and the other end to a properly grounded AC outlet that is easily accessible and close to the monitor. ●
6. After connecting cables, put stand cover correctly into the holes unders stand. If securely connected, you can hear click sound from the latch.
7. Power ON the PC, then the monitor.
8. If you see the NO SIGNAL message, check the signal cable and connectors.
9. After using the system, power OFF the monitor, then the PC.

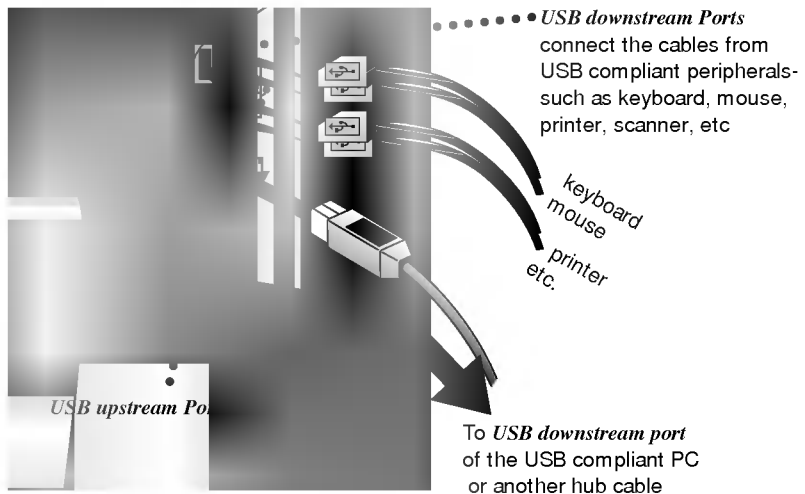

Note : If you see the INPUT SIGNAL OUT OF RANGE message, check to make sure your system is set to one of the factory preset modes (see page A15), or is set to a resolution and refresh rate within the specification limits of this monitor.

Making use of USB (Universal Serial Bus) Feature

USB (Universal Serial Bus) is an innovation in connecting your different desktop peripherals conveniently to your computer. By using the USB, you will be able to connect your mouse, keyboard, printer, and other peripherals to your monitor instead of having to connect them to your computer. This will give you greater flexibility in setting up your system. USB allows you to connect chain up to 120 devices on a single USB port, and you can “hot” plug (attach them while the computer is running) or unplug them while maintaining Plug and Play auto detection and configuration. This monitor has an integrated self-powered USB hub, allowing up to 4 other USB devices to be attached it.

USB connection

1. Connect the upstream port of the monitor to the downstream port of the USB compliant PC or another hub using the USB cable (Computer must have a USB port).
2. Connect the USB compliant peripherals to the downstream ports of the monitor.

Making use of USB (Universal Serial Bus) Feature

NOTE

- To activate the USB hub function, the monitor must be connected to a USB compliant PC(OS) or another hub with the USB cable(enclosed).
- When connecting the USB cable, check that the shape of the connector at the cable side matches the shape at the connecting side.
- When the monitor is not plugged into an electric socket, the peripherals connected to the downstream ports will not operate.
- Even if the monitor is in a power saving mode, USB compliant devices will function when they are connected the USB ports(both the upstream and downstream) of the monitor.

USB specifications

USB standard	Rev. 1.1 complied self-powered hub
Downstream power supply	500mA for each (MAX)
Communication speed	12 Mbps (full), 1.5 Mbps (low)
	1 Upstream port
	4 Downstream ports

Location and Function of Controls

Front View

Rear View

Front Panel Controls

<Shortcut Keys>

- Brightness and Contrast can be adjusted directly without entering the On Screen Display (OSD) system.

Touch the ◀/▶ buttons to display the menu and then the ▼/▲ / ◀/▶ buttons to adjust the settings. To save all changes, touch the OSD button. The Brightness and Contrast functions are also available in the On Screen Display (OSD) menu.

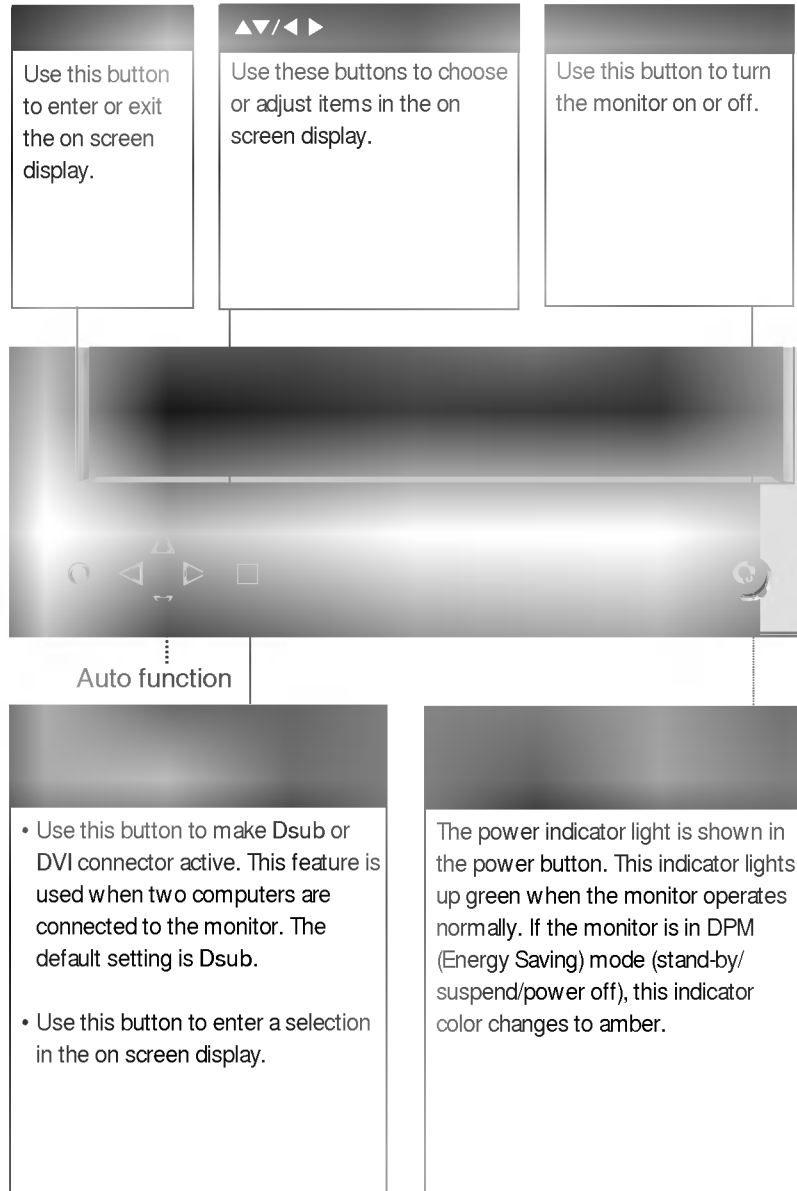

<Auto function>

- This function is suitable for analog signal input only. This function is for the automatic adjustment of the screen position, clock and phase.

Note: Some signal from some graphics boards may not function properly. If the results are unsatisfactory, adjust your monitor's Position, Clock and Phase manually.

Control Panel Function

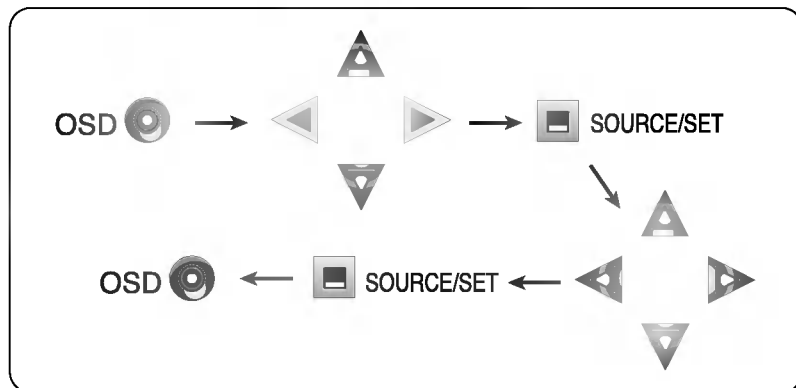

On Screen Display (OSD) Control Adjustment

Making adjustments to the image size, position and operating parameters of the monitor are quick and easy with the On Screen Display Control system. A quick example is given below to familiarize you with the use of the controls. Following section is an outline of the available adjustments and selections you can make using the OSD.

NOTE

- Allow the monitor to stabilize for at least 30 minutes before making image adjustment.

To make adjustments in the On Screen Display, follow these steps:

- 1** Touch the OSD Button, then the main menu of the OSD appears.
- 2** To access a control, use the \triangle or ∇ Buttons. When the icon you want becomes highlighted, touch the SOURCE/SET Button.
- 3** Use the $\triangle/\nabla/\leftarrow/\rightarrow$ Buttons to adjust the item to the desired level.
- 4** Accept the changes by touching the SOURCE/SET Button.
- 5** Exit the OSD by touching the OSD Button.

On Screen Display(OSD) Selection and Adjustment

You were introduced to the procedure of selection and adjusting an item using the OSD system.

Listed below are the icons, icon names, and icon descriptions of the items that are shown on the Menu.

Brightness

Used to adjust the brightness of the screen.

Contrast

Adjust the display to the contrast desired.

PRESET 9300K/6500K

To appear the displays color temperature.

- 9300K:Slightly bluish white.
- 6500K:Slightly reddish white.

RED
GREEN
BLUE

To set your own color levels.

Vertical Position

To move image up and down.

Horizontal Position

To move picture image left and right.

NOTE

- When a digital signal is set as an input, only the BRIGHTNESS, CONTRAST and SETUP properties can be adjusted. You do not need to adjust the other properties.

On Screen Display(OSD) Selection and Adjustment

CLOCK To minimize any vertical bars or stripes visible on the screen background. The horizontal screen size will also change.

PHASE To adjust the focus of the display. This item allows you to remove any horizontal noise and clear or sharpen the image of characters.
Phase adjustment should be done after adjusting the **Clock**.

LANGUAGE To choose the language in which the control names are displayed.

IMAGE SIZE This function displays the image in its original size or enlarged size so as to fit in the full screen of the LCD panel.

OSD POSITION To adjust position of the OSD window on the screen.

MODE INFO This function displays the current mode information on the screen when power on the monitor.

BEEP To select beep ON or OFF.

ELAPSED TIME To display the use time of monitor.

Energy Saving Design

This monitor complies with the EPA's Energy Star program, which is a program designed to have manufacturers of computer equipment build circuitry into their products to reduce power consumption during time of non-use.

This monitor also goes into its energy saving mode if you exceed the monitor's operating limits, such as the maximum resolution of 1280x1024 or the frequency refresh rates of 30-80kHz horizontal or 56-85Hz vertical. When this monitor is used with a Green or EPA Energy Star PC, or a PC with a screen blanking software following the VESA Display Power Management Signalling (DPMS) protocol, this monitor can conserve significant energy by reducing power consumption during periods of non-use. When the PC goes into the energy saving mode, the monitor will go into a suspended operation state, indicated by the Power LED light changing from a green color to an amber color. After an extended period in the suspended mode, the monitor will then enter a semi-OFF mode to conserve more energy. In the semi-OFF mode or DPMS OFF mode as we call it in our specifications, the Power LED will still show an amber color. When you awaken your PC by hitting a key or moving the mouse, the monitor will also awaken to its normal operating mode, indicated by the green Power LED light. By following these conventions, the power consumption can be reduced to the following levels:

Power Consumption

Mode	Hori. Sync	Verti. Sync	Video	Power Consumption	LED Color
Normal(Max.)	On	On	Normal	≤ 65W	Green
Stand-by	Off	On	Off	≤ 5W	Amber
Suspend	On	Off	Off	≤ 5W	Amber
Power Off	Off	Off	Off	≤ 5W	Amber

Low Radiation Compliance (MPR II), Self Diagnostics Messages and DDC (Display Data Channel)

Low Radiation Compliance (MPR II)

This monitor meets one of the strictest guidelines available today for low radiation emissions, offering the user extra shielding and an antistatic screen coating. These guidelines, set forth by a government agency in Sweden, limit the amount of emission allowed in the Extremely Low Frequency (ELF) and Very Low Frequency (VLF) electromagnetic range.

Self Diagnostics Messages

Special Self Diagnostics messages will appear on the screen when identifying the following monitor conditions:

- NO SIGNAL

SELF DIAGNOSTICS

CHECK SIGNAL CABLE

This OSD may pop up when it is ON but no signal is detected. In this case the message NO SIGNAL will be highlighted, alerting you to check the signal cable connections.

- INPUT SIGNAL OUT OF RANGE

INPUT SIGNAL OUT OF RANGE

POWER MANAGEMENT 20SEC

This OSD may appear to inform you that the signal being sent to the monitor is not within its frequency range. In this case, you would need to check the resolution and refresh rate you have your video card set to, and adjust to be within the range of the monitor.

DDC (Display Data Channel)

DDC is a communication channel over which the monitor automatically informs the host system (PC) about its capabilities. This monitor has two DDC function; DDC2B carries out uni-directional communication between the PC and the monitor. Under these situations, the PC sends display data to the monitor but not commands to control the monitor settings.

Video Memory Modes

The monitor has 26 memory locations for display modes, 16 of which are factory preset to popular video modes.

Display Modes (Resolution)

Display Modes (Resolution)	Horizontal Freq. (kHz)	Vertical Freq. (Hz)	
1	VGA 640 x 350	31.469	70 D-Sub/DVI
2	VGA 720 x 400	31.468	70 D-Sub/DVI
3	VGA 640 x 480	31.469	60 D-Sub/DVI
4	VESA 640 x 480	37.500	75 D-Sub/DVI
5	VESA 640 x 480	43.269	85 D-Sub/DVI
6	VESA 800 x 600	37.879	60 D-Sub/DVI
7	VESA 800 x 600	46.875	75 D-Sub/DVI
8	VESA 800 x 600	53.674	85 D-Sub/DVI
9	MAC 832 x 624	49.725	75 D-Sub/DVI
10	VESA 1024 x 768	48.363	60 D-Sub/DVI
11	VESA 1024 x 768	60.123	75 D-Sub/DVI
12	VESA 1024 x 768	68.677	85 D-Sub/DVI
13	MAC 1152 x 870	68.681	75 D-Sub/DVI
14	VESA 1152 x 900	61.805	65 D-Sub/DVI
15	VESA 1280 x 1024	63.981	60 D-Sub/DVI
16	VESA 1280 x 1024	79.976	75 D-Sub

User Modes

- Modes 17-26 are empty and can accept new video data. If the monitor detects a new video mode that has not been present before or is not one of the preset modes, it stores the new mode automatically in one of the empty modes starting with mode 17.

If you use up the 10 blank modes and still have more new video modes, the monitor replaces the information in the user modes starting with mode 17.

Recalling Display Modes

- When your monitor detects a mode it has seen before, it automatically recalls the image settings you may have made the last time you used that mode.

You may, however, manually force a recall of each of the 16 preset modes by pressing the Recall button. All preset modes are automatically recalled as the monitor senses the incoming signal.

The ability to recall the preset modes is dependent on the signal coming from your PC's video card or system. If this signal does not match any of the factory modes, the monitor automatically sets itself to display the image.

Troubleshooting

Check the following before calling for service.

Display Position is incorrect.

- Touch the ▼/▲ buttons to activate the AUTO function.
- If the results are unsatisfactory, adjust the image position using the H position and V position icon in the on screen display.

On the screen background, vertical bars or stripes are visible.

- Touch the ▼/▲ buttons to activate the AUTO function.
- If the results are unsatisfactory, decrease the vertical bars or stripes using the CLOCK icon in the on screen display.

Any horizontal noise appearing in any image or characters are not clearly portraided.

- Touch the ▼/▲ buttons to activate the AUTO function.
- If the results are unsatisfactory, decrease the horizontal bars using the PHASE icon in the on screen display.

NO SIGNAL message.

- The signal cable is not connected, or is loose. Check and secure the connection.

INPUT SIGNAL OUT OF RANGE message appears.

Picture is blank.

- The frequency of the signal from the video card is outside the operating range of the monitor.

*Horizontal Frequency: 30kHz-80kHz

*Vertical Frequency: 56Hz-85Hz

Use the graphics board's utility software to change the frequency setting (Refer to the manual for graphics board).

You can change the setup to the supported resolution using the Safe Mode (Press the F8 key during booting the system).

The power LED is illuminated amber.

- The monitor is in its display power management mode.
- There is no active signal coming from the PC.
- The signal cable is not fastened securely.
- Check the computer power and graphics adapter configuration.

The monitor doesn't enter the power saving off mode (Amber).

- Computer video signal is not VESA DPMS standard. Either the PC or the video controller card is not using the VESA DPMS power management function.

NOTE

- If the power indicator(LED) light is blinking amber, may result in abnormal condition of the monitor.
- Then press a power ON/OFF button on the front panel control and call your service technician for more information.

Service

Unplug the monitor from the wall outlet and refer servicing to qualified service personnel when :

- The power cord or plug is damaged or frayed.
- Liquid has been spilled into the monitor.
- The monitor has been exposed to rain or water.
- The monitor does not operate normally following the operating instructions. Adjust only those controls that are covered in the operating instructions. An improper adjustment of other controls may result in damage and often requires extensive work by a qualified technician to restore the monitor to normal operation.
- The monitor has been dropped or the cabinet has been damaged.
- The monitor exhibits a distinct change in performance.
- Snapping or popping from the monitor is continuous or frequent while the monitor is operating. It is normal for some monitors to make occasional sounds when being turned on or off, or when changing video modes.

Do not attempt to service the monitor yourself, as opening or removing covers may expose you to dangerous voltage or other hazards. Refer all servicing to qualified service personnel.
