### Important Safety Instruction

Before it is used, this refrigerator must be properly installed and located in accordance with the installation instructions in this document.

Never unplug your refrigerator by pulling on the power cord. Always grip plug firmly and pull it straight out from the outlet.

When moving your appliance away from the wall, be careful not to roll over the power cord or to damage it in any way.

After your refrigerator is in operation, do not touch the cold surfaces in the freezer compartment, particularly when your hands are damp or wet. Skin could adhere to these extremely cold surfaces.

Unplug the power cord from the power outlet for cleaning or other requirements. Never touch it with wet hands because you can get an electric shock or be hurt.

Never damage, process, severely bend, pull out, or twist the power cord because damage the power cord may cause a fire or electric shock. You have doubts on whether the appliance is properly grounded.

Never place glass products in the freezer because they may be broken due to expansion when their contents are frozen.

Never allow your hands within the ice storage bin of the automatic ice maker. You could be hurt by the operation of the automatic ice maker.

Never allow anyone to climb, sit, stand or hang on the Home Bar door. These actions may damage the refrigerator and even tip it over, causing severe personal injury.

If possible, connect the refrigerator to its own individual electrical outlet to prevent it and other appliances or household lights from causing an overload that could cause a power outage.

If the supply cord is damaged, it must be replaced by a special cord or assembly from the manufacturer or its service agent.

## Don't use an extension cord

## Power cord replacement

## Child entrapment warning

DANGER: Risk of child entrapment.

Before you throw away your old refrigerator or freezer:

Take off the doors but leave the shelves in place so that children may not easily climb inside.

The appliance is not intended for use by young children or infirm persons without supervision.

Young children should be supervised to ensure that they do not play with the appliance.

#### Don't store

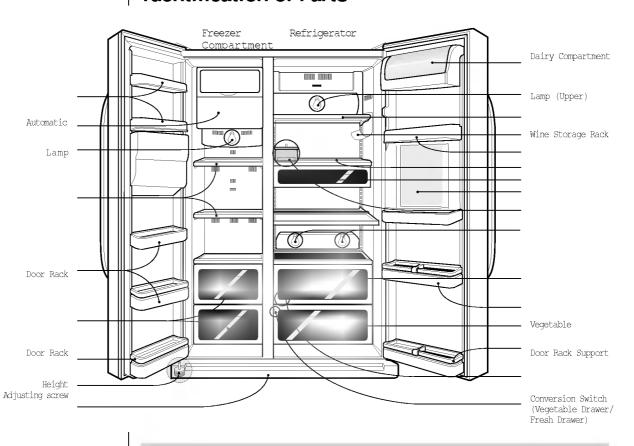

#### **Grounding (Earthing)**

Don't store or use gasoline or other flammable vapor and liquids in the vicinity of this or any other appliance.

In the event of an electric short circuit, grounding (earthing) reduces the risk of electric shock by providing an escape wire for the electric current.

In order to prevent possible electric shock, this appliance must be grounded Improper use of the grounding plug can result in an electric shock. Consult a qualified electrician or service person if the grounding instructions are not completely understood, or if you have doubts on whether the appliance is

### **Identification of Parts**

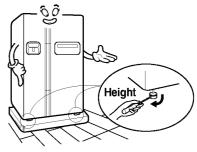

#### **NOTE**

• If you found some parts missing from your unit, they may be parts only used in other models. (i.c. the "Home Bar" is not included in all models)

#### Where to Install

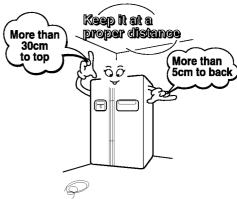

## Strong and even floor

Unstable installation may cause vibration and noise. If the floor to install the refrigerator on is not even, make the refrigerator level by rotating the height adjusting screw. Carpet or floorcloth on which a refrigerator is installed may be discolored by heat from the bottom of the refrigerator. So, it is necessary to place

# A proper distance from adjacent items

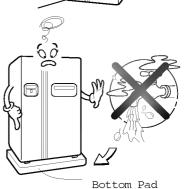

Please keep the refrigerator at a proper distance from other things. Too small a distance from adjacent items may result in lowered freezing capability and increased electricity charges

#### Where feed water pipe can be easily connected in a dry place

Select a place where a feed water pipe can be easily connected between the automatic ice maker and dispenser.

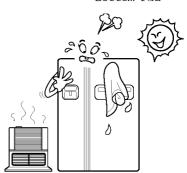

A wet or near-water place, refrigerator may be rusted or electricity may be leaking

# Where is free from heat or coal gas

Places where ambient temperature are high, freezing capability is deteriorated and electric charge is increased.

Coal gas and smoke may discolor the appearance of refrigerator.

#### NOTE

\* Install the refrigerator at a place where the ambient temperature is  $5\,^\circ\text{C}^-43\,^\circ\text{C}$  .

Too high or low ambient temperature may cause functional troubles. Also,

### Door Removal

Remove lower cover and then feed water pipe laterally.

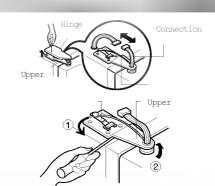

Remove the lower cover by lifting upward, and then pull up the feed water tube while

pressing area Å shown in the figure to the

remove the refrigerator door and pass the refrige

# Remove the freezer compartment door

- 1) Separate all connection wires except for the earth line after removing the hinge cover by loosening the screws.
- 2) Remove the keeper by rotating it to counted clockwise  $(\mathring{A})$  and then lifting the upper hinge up  $(\zeta)$ .

#### NOTE

· In removing the upper hinge, be careful so that the door does not to fall over

If your access door is too narrow for the refrigerator to pass the through,

3) Remove the freezer compartment door by lifting it upward. This time, the door should be lifted enough for the feed water pipe tube to be completely pulled at.

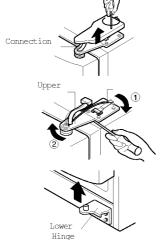

#### NOTE

· Move the refrigerator compartment door passing through the access door and laying it down but be careful not to damage the feed water pipe

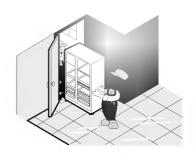

# Remove the refrigerator door

- 1) Loosen the hinge cover screws and remove the cover. Remove all connection wires, if any, except for the earth line
- 2) Remove keeper by rotating it clockwise (Å) and then remove the upper hinge by lifting it up (Ç).
- 3) Remove the refrigerator compartment door by lifting it up.

## Pass the refrigerator

Pass the refrigerator laterally through the access door as shown in the right figure.

# Mount the freezer and refrigerator compartment doors

Mount them in the reverse sequence of removal after they pass through the access door.

## Feed water pipe Installation

## Before installation

- <sup>n</sup> Automatic ice maker operation needs water pressure of  $147 \sim 834$ kPa  $(1.5 \sim 8.5 \text{ kgf/cm}^2)$  (That is, an instant paper cup (180cc) will be fully filled within 10 sec.).
- $^{\rm n}$  If water pressure does not reach the rating 147kPa (1.5kgf/cm²) or below, it is necessary to purchase a separate pressure pump for normal automatic icing and cool water feed.
- $_{\rm n}$  Keep the total length of the feed water pipe tube within 12m and be careful for the tube not be bent straightly. If the tube is 12m or longer it may cause trouble in water feed owing to the drain water pressure.

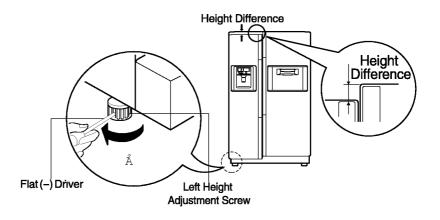

#### Warning

- <sup>n</sup> Connect to potable water supply only.
- Automatic Ice maker must be installed by manufacturer's services.

#### If the freezer compartment door is lower than the refrigerator compartment door

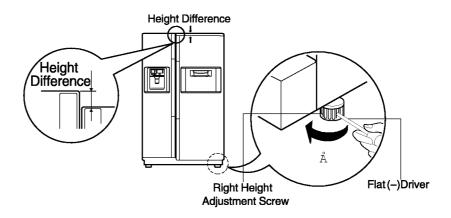

### Height Adjustment

Make them level by inserting flat ( - type) driver into the groove of the left height adjusting screw and rotating it clockwise ( $\mathring{A}$ ).

If the freezer compartment door is higher than the refrigerator compartment door

Make them level by inserting flat ( - type) driver into the groove of the right height adjusting screw and rotating it clockwise (Å).

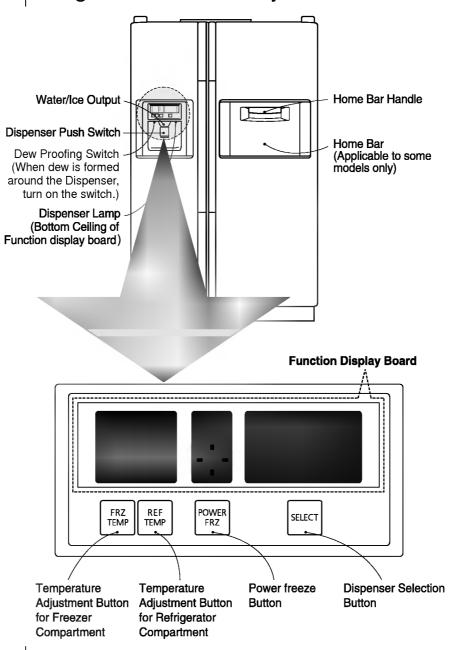

## After leveling the door height

Refrigerator door will close smoothly by heightening the front side by adjusting the height adjusting screw. If the door does not close well because of bad Open/Close, performance may be affected.

### **Getting Started**

When your refrigerator is first installed, allow it to stabilize at normal operating temperatures for 2~3 hours prior to filling it with fresh or frozen foods. If operation is interrupted, wait 5 minutes before restarting.

### Designation of Functional Adjustment Board

#### How to adjust the temperature in the freezer compartment

## How to adjust the temperature in

refrigerator

compartment

### Adjust the Temperature and Functions

This lamp indicates the temperature status of the freezer compartment.

- nAt first powering or after a power failure, 2(Proper) will be lit.
- n Pressing button will move the temperature setting through 2(Proper)
  - → (Proper Strong) → 3(Strong)
  - $\rightarrow$  (Strongest)  $\rightarrow$  1 (Weak)  $\rightarrow$  (Proper

Weak) in sequence. Generally,  $2\,\mathrm{(Proper)}$  is good for food storing. Select an appropriate one among 1(Weak), (proper Weak) or (Proper Strong), 3(Strong), and (Strongest)

This lamp indicates the temperature status of the refrigerator compartment

- <sup>n</sup>At first powering or after a power failure, 2/Droper) will be lit.

  Pressing button will make
- button will move the temperature setting through 2(Proper)
- → (Proper Strong) → 3(Strong)
- → (Strongest) → 1 (Weak) → (Proper Weak) in sequence. n Generally, 2(Proper) is good for food
- Select an appropriate one among 1 (Weak), (Proper Weak) or (Proper Strong), 3(Strong) and (Strongest) according to the storing amount and using frequency.

#### NOTE

- · Set the temperature adjusting board to a desirous compartment as inner temperature may be varied according to the using environment. Inner temperature is increasingly lowered getting to 3.
- · Detach the protective tape on the front surface of function display board to make the surface and light more clear.

#### Power freeze

This lamp indicates that the power freeze function is in operation. The power freeze function is used to freeze food or make ice faster in the freezer compartment.

- Pressing button operates power freeze function, with the lamp ON.
- n One pressing of the button switches the status from setting to release, or reversely.
- <sup>n</sup> Power freeze will be automatically released, though no release action is taken, after a certain time passes.
  This lamp indicates the selection between water and ice.

n A+ the first powering or after a power

will be lit.

<sup>1</sup> Crushed ice, water to cubed ice can be

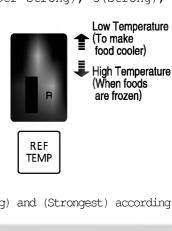

POWER

FRZ

**TEMP** 

Low Temperature (When frozen foods

are thawing)

High Temperature

(When foods are

severely thawing)

#### Door open alarm

An alarm will ring 3 times if the refrigerator door is left opened for more than 1 minute. This alarm will ring at 30 sec. and stop when the door is opened. 'Door Open Alarm' function makes alarm sound only, having no separate indicating function. If the alarm sound does not stop even after the freezer and refrigerator compartment doors are closed, contact the service center.

# Self-diagnosis (fault detection) function

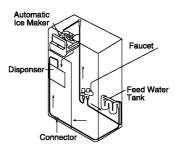

The Self-diagnosis function operates when something is wrong with the unit. When an error occurs in the unit, pressing any of the buttons will have no effect.

Immediately contact the service center without turning the power OFF. If

### Automatic ice maker and Dispenser

## How ice/cold water is supplied

Water is cooled while stored in the water tank in the refrigerator compartment, and then sent to the dispenser. Ice is made in the automatic ice maker and sent to the dispenser divided into crushed or cubed form ice.

## How to use dispenser

 $_{\mbox{\tiny n}}$  Select one among crushed ice, water, and cubed ice and slightly press the push switch with a glass or other container.

### ser

#### Crushed Ice

Light the crushed ice indicating lamp by pressing the selection button.

· Crushed ice will be dispensed by pressing the push switch with a

#### Water

Light the water indicating lamp by pressing the selection button.

·Water will be dispensed by pressing the push

#### **Cubed Ice**

Light the cubed ice indicating lamp by pressing the selection button.

• Cubed ice will be dispensed by pressing the push switch with a glass

#### **NOTE**

- · Crushed ice will be automatically selected after a power failure or when the power plug is connected again.
- · Place glasses or other containers near the ice outlet otherwise ice is likely to be dropped on the floor.
- A snap sound will be heard in 5 seconds after ice is fully dispensed. This sound is made when the ice outlet is closed.
- $\cdot$  Please leave your glass near the ice outlet for  $2{\sim}3$  seconds after releasing your glass from pressing the push switch to allow any left over water or ice to be dispansed.
- ·Please wipe away water dropped below the dispenser by removing the water collector cover.
- · If cubed ice is selected following crushed ice, there may still be some left

#### Automatic ice maker

- $^{\rm n}$  The automatic ice maker can automatically make 8 pieces of ice cube at a time, 80 pieces a day. But these quantities may be varied according to various conditions including how many times the refrigerator door opens and closes.
- In Ice making stops when the ice storage bin is full.

#### NOTE

· It is normal that a noise is produced when ice made is dropped into the ice

# When ice maker does not operate smoothly

Ice is lumped together

- $^{\rm n}$  When ice is lumped together, take the ice lumps out of the ice storage bin, break them into small pieces, and then place them into the ice storage bin again.
- $_{\mbox{\tiny T}}$  When the ice maker produces too small or lumped ice, the amount of water supplied to the ice maker need to adjusted. Contact the service center.
- \* If ice is not used frequently, it may lump together.

#### Power failure

 $_{\rm n}$  Ice meet drop into the freezer compartment. Take the ice storage bin out and discard all the ice then dry it and place it back. After the machine is powered again, crushed ice will be automatically selected.

#### The unit is newly installed

 $_{\mbox{\tiny n}}$  It takes  $% \left( 1\right) =1$  about 12 hours for a newly installed refrigerator to make ice in the freezer compartment.

#### **Cautions**

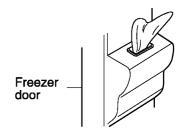

Throw away the ice (about 20 pieces) and water (about 7 glasses) first made after refrigerator installation.

The first ice and water may include particles or odor from the feed water pipe or feed water box. This is necessary in case that the refrigerator has not been used for a long time.

Keep children away from the dispenser. Children may push switch incorrectly bad or damage lamps.

Be careful that food is not block the ice passage.

If foods are placed at the entrance of ice passage, ice may not be dispensed. The ice passage may also be covered with ice powder if splinter ice is used only. This time, remove the ice powder accumulated.

Never store beverage cans or other foods in ice storage bin for the purpose of rapid  $\infty$ ling.

Such actions may damage the automatic ice maker.

Never use thin crystal glass or crockery to collect ice. Such glasses or containers may be broken.

Put ice first into a glass before filling water or other beverages. Water may be splashed if ice is added to existing liquid in a glass.

Never touch a hand or other tools on ice outlet. Touch may cause a part breakage or hand injury.

Never remove the ice maker cover.

Sometimes level the surface so that the ice storage bin is fully filled with ice. Ice is piled up just near the ice maker. So, such status may be considered, by the ice maker, that the ice storage bin is fully filled and ice making operation may stop.

If discolored ice is dispensed, immediately contact Service Center, stopping use.

Never use too narrow or deep glass.

Ice may be jammed in ice passage and, thus, the refrigerator may be failed.

Keep the glass at a proper distance from ice outlet.

### Home Bar (In select Models Only)

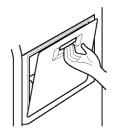

#### How to use

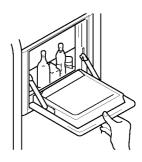

Gently pull the handle of the home bar to open it.

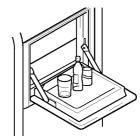

- $^{\scriptscriptstyle \rm n}$  You can access the home bar without opening the refrigerator door, thus saving electricity.
- $^{\rm n}$  The Inner lamp is lit in the refrigerator compartment when the home bar door opens. So it is easy to see item in the compartment.

Store frequently accessed items, such as beverages in the home bar.

 $^{\rm n}\, {\rm Home}\,$  bar is kept at the right temperature thanks to a temperature sensor only for the home bar.

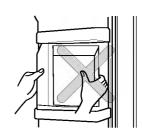

# Use the home bar door as a stand

- $_{\rm n}$  You can use the home bar door as a stand to pour beverages and such but never use the home bar door as a chopping board and take care not to damage it with sharp objects.
- $\mbox{\tiny 1}\mbox{\sc Never}$  rest your arms or press down on it.

Never take out the inner home bar cover

 $\mbox{\tiny $n$}$  The Home bar will not function properly without the cover.

Never place heavy matters on the home bar door or allow children to hang on it.

 $\mbox{\tiny $n$}$  Not only the home bar door may be damaged, but also children may get hurt.

### **Shelf**

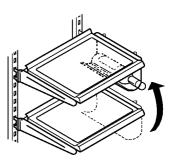

Slide type tempered glass shelf (In select models only)

Attachable wine corner (In select

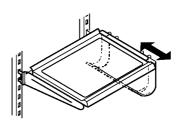

models only)

Slide type shelf allows you to place or take food out or put it in more conveniently.

Bottles can be stored laterally with this wine corner. This can be attached to any shelf.

Wine holder adjustment:
Wine holder can be separated by p u l l i n g it straight out and installed by placing it at the end of the shelf you want and pushing it inward.

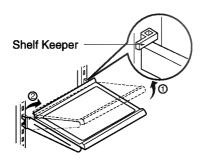

## Shelf height adjustment

The Refrigerator compartment shelf is movable so that you can place it at a proper height according to the space you need for different food items..

How to separate a shelf:

At delivery, shelves are fixed with keepers so that they cannot be moved during distribution. So, remove keepers first, lift the shelf up  $(\mathring{A})$ , and then separate it pushing it down (C).

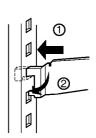

How to install a shelf:

Position the shelf at the desired height and hang its links on the grooves. This time, lower the front side of the shelf and

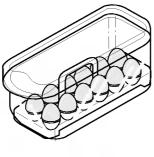

#### NOTE

 Make the shelf horizontal.Otherwise it may fall

## **Egg Box**

You can move the egg box to a place you want and select another form of box according to the amount of eggs.

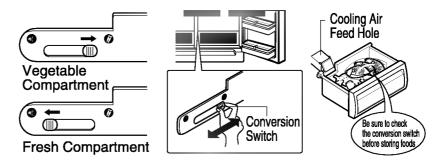

[Normal] [For Many Eggs]

#### NOTE

- · Never use the egg box as an ice storage bin. It can break.
- ${\boldsymbol{\cdot}}$  Never store the egg box in the freezer compartment or fresh

### Convert into a Vegetable or Fresh compartment

 $_{\mbox{\tiny n}}$  The Bottom drawer in the refrigerator can be converted into a vegetable or

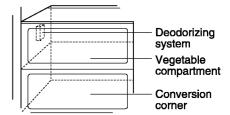

The Fresh compartment maintains the temperature at a lower point than the refrigerator compartment so that meat or fish can be stored fresh

#### **NOTE**

- · Vegetables or fruits are frozen if the conversion switch is set to fresh compartment. So, be sure to check it before storing foods.
- $\boldsymbol{\cdot}$  If possible, do not place food around the  $\cos\!l$  air feed hole, which  $% \left( l\right) =\left( l\right) +\left( l\right)$

### Deodorizer

This system efficiently absorbs strong odors by using the optical catalyst. This system does hot have any affect on

# How to use the deodorizing system

- $^{\scriptscriptstyle \rm T}$  Since it is installed already installed onto the cool air intake duct from the from the refrigerator compartment, you need no separate installation.
- $^{\scriptscriptstyle{11}}\textsc{Please}$  use closed containers to store food with pungent odors.

### Location of Food

## Automatic ice maker

Automatically made ice is stored.

Wine rack

Store wine.

**Snack Drawer** 

Store small foods such as bread, snacks, etc.

Freezer compartment shelf

Store various frozen foods such as meat, fish, ice cream, frozen snacks, etc.

Freezer compartment door rack

- <sup>n</sup> Store small packaged frozen food.
- $\mbox{\tiny $n$}$  Temperature is likely to increase as door opens.

So, do not store long-term food such

Freezer compartment drawer

<sup>n</sup> Store meat, fish, chicken, etc. after wrapping them with aluminum.

Store dairy products such as butter,

Dairy compartment

Egg box

Home bar

Store frequently accessed foods such as beverage, etc..

Refrigerator compartment shelf

Store side dishes or other foods at a proper distance from each other for effective  $\infty\!\!$ 

Refrigerator compartment door rack

Store small packaged food or beverages such as milk, juice, beer, etc..

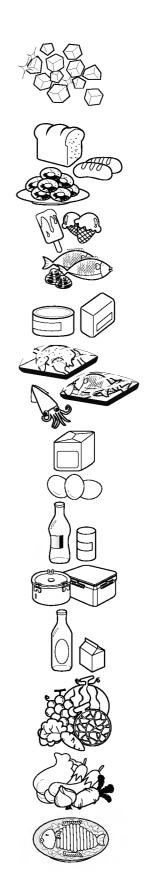

Vegetable compartment

Store vegetables or fruits.

Vegetable compartment/fre sh compartment conversion corner

Store vegetable, fruits, meat to thaw, fish, etc. setting the conversion switch as necessary.

Be sure to check the conversion switch setting before storing foods.

### **Storing Foods**

- ${\bf r}$  Store fresh food in the refrigerator compartment. How food is frozen and thawed is an important factor in maintaining its freshness and flavor.
- $\mbox{\tiny {\bf n}}$  Do not store food which goes bad easily at low temperatures, such as bananas, and melons.
- $^{\rm n}$  Allow hot food to cool prior to storing, placing hot food in the refrigerator could spoil other food, and lead to higher energy consumption.
- <sup>n</sup> When storing the food, cover it with vinyl wrap or store in a container with a lid. This prevents moisture from evaporating, and helps food to keep its taste and nutrients.
- $^{\scriptscriptstyle \rm T}$  Do not block air vents with food. Smooth circulation of chilled air keeps refrigerator temperatures even.
- ${}^{\scriptscriptstyle \rm D}$ Do not open the door frequently. Opening the door lets warm air enter the refrigerator, and cause temperatures to rise.
- ${\mbox{\tiny n}}$  Never keep too much food in door rack because they may push against by inner racks so that the door cannot be fully closed.

## Freezer compartment

- $\mbox{\tiny $n$}$  Do not store bottles in the freezer compartment they may break when frozen.
- $_{\scriptscriptstyle \mathrm{D}}$  Do not refreeze food that has been thawed. This causes loss of taste and

## Refrigerator compartment

- $_{\mbox{\tiny n}}$  Avoid placing moist food in top refrigerator shelves, it could freeze from direct contact with chilled air.
- $_{\rm m}$  Always clean food prior to refrigeration. Vegetables and fruits should be washed and wiped, and packed food should be wiped, to prevent adjacent food from spoiling.
- $_{\scriptscriptstyle \mathrm{D}}$  When storing eggs in their storage rack or box, ensure that they are fresh, and

#### **NOTE**

• If you keep the refrigerator in a hot and humid place, and frequently open the door or put a lot of vegetables in it, moisture may form in it which has no effect on its performance. Just wipe the moisture with a cloth free.

#### How to Dismantle Parts

#### NOTE

Dismantling is done in the reverse sequence of assembly. Be sure to unplug the power plug before dismantling and assembly. Never apply severe force to dismantle parts. Parts may be damaged.

# Freezer compartment lamp

Separate the lamp by pulling it out ( $\zeta$ ) while slightly lifting the lamp cover ( $\mathring{A}$ ). Turn the bulb counterclockwise. Max 240V

60% bulb for refrigerator is used and can be purchased at a service center.

#### Dispenser lamp

Remove the cover by inserting a flat(-type) driver into the front groove and pulling it out, and then remove the ramp. Max. 240V 15W bulb for refrigerator is used and can be purchased at a service

# Freezer compartment shelf

Lift the front side (Å) and pull it out

## Door rack and support

Lift the door rack holding both sides  $(\mathring{\mathbb{A}})$  and pull it out to (Ç) direction.

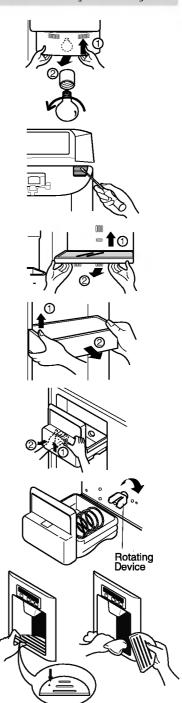

#### Ice storage bin

Hold the ice storage bin as shown in the right figure and pull it out  $(\zeta)$  while slightly lifting it  $(\mathring{A})$ .

- $^{\scriptscriptstyle \rm n}$  It is recommended not to dismantle the ice storage bin unless it is necessary.
- $^{\rm n}\,\mbox{Be}$  sure to use both hands when removing the ice storage bin, not to drop it on the floor
- "If the ice storage bin does not fit well,

## After dispenser is used

Water collector has no self-drainage function. So it should be cleaned regularly. Remove the cover by pressing the left side of water collector cover and dry it with a cloth. Press the point marked as shown in the figure to the right to remove the water collector cover.

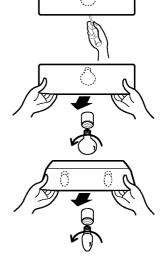

# Upper lamp in refrigerator compartment

To remove the lamp cover, loosen the cross-shaped screw and pull the lamp cover forwards while pressing the bottom side of the lamp cover upwards. Turn the bulb counterclockwise.

Max.  $240V\ 60W$  bulb for refrigerator is used and can be purchased at a service

# Lower lamp in refrigerator compartment

Separate the lamp cover by holding both lower sides of it and pulling it it forwards. Turn the bulb counterclockwise. Max. 240V 30W bulb for refrigerator is used and can be

#### Home bar

 $^{\mbox{\tiny n}}$  Separate the upper rack of the home bar and then pull out the home bar cover (Å).

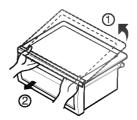

#### **NOTE**

· Be sure to remove parts on the refrigerator door to remove the vegetable compartment, snack drawer and home bar cover.

# Vegetable compartment cover

- $^{\rm n}$  Pull out the vegetable compartment cover (  $\mbox{\tt C}$  ) with its backside lifted up (Å), and the cover can be removed.
- $\mbox{\tiny n}$  To install the cover, push it fully until it touches the back wall.

#### **General Information**

#### Vacation time

During average length vacations, you will probably find it best to leave the refrigerator in operation. Place freezable items in freezer for longer storage. When you plan not to operate, keep it running remove all food, disconnect the power cord, clean the interior thoroughly, and leave each door OPEN to

#### Power failure

Most power failures are corrected in an hour or two will not affect your refrigerator temperatures.

However, you should minimize the number of door openings while the power is off.

During power failures of longer duration, place a block of dry ice on top of

#### If you move

Remove or securely fasten down all loose items inside the refrigerator. To avoid damaging the height adjusting screws, turn them all the way into the

# Anti condensation pipe

The outside wall of the refrigerator cabinet may sometimes get warm, especially just after installation.

Don't be alarmed. This is due to the anti-condensation pipe, which pumps hot air refrigerator to prevent "sweating" on the outer cabinet wall.

### Cleaning

It is important that your refrigerator be kept clean to prevent undesirable odors. Spilled food should be wiped up immediately, since it may acidify and stain plastic surfaces if left uncleaned.

#### **Exterior**

Use a lukewarm solution of mild soap or detergent to clean the durable finish of your refrigerator.

Wipe with a clean damp cloth and then dry.

#### Interior

Regular cleaning is recommended. Wash all compartments with a baking soda solution or a mild detergent and warm water. Rinse and dry.

#### After cleaning

Please verify that the power cord is not damaged, power outlet is not

#### Warning

Always remove power cord from the wall outlet prior to cleaning in the vicinity of electrical parts (lamps, switches, controls, etc.).

Wipe up excess moisture with a sponge or cloth to prevent water or liquid from getting into any electrical part and causing an electric shock.

Never use metallic scouring pads, brushes, coarse abrasive cleaners, strong alkaline solutions, flammable or toxic cleaning liquids on any surface.

Do not touch frozen surfaces with wet or damp hands, because damp object will stick or adhere to extremely cold surfaces.

## Trouble Shooting

Before calling for service, review this list. It may save you both time and expense. This list includes common occurrences that are not the result of

Normal Operations Refrigerator		
Refrigerator compressor does not run.	Refrigerator control is off.	Set refrigerator control.
	Refrigerator is in defrost cycle.	This is normal for a fully automatic defrosting refrigerator.  The defrost cycle occurs
	Plug at wall outlet is disconnected.	periodically.  Make sure plug is tightly pushed
	Power outage. Check house lights.	into outlet.
Refrigerator runs too much or too long	Refrigerator is larger than the previous one you owned.	Call local electric company.  This is normal. Larger, more
	Room or outside weather is hot.	efficient units run longer.  It is normal for the refrigerator to
	Refrigerator has recently been disconnected for a period of time.	work longer under these conditions.  It takes a few hours for the
	Automatic ice maker is operating.	refrigerator refrigerator to come down to room temperature completely.
	Large amounts of warm or hot food may have been stored recently.	Operation of the ice maker causes the refrigerator to run slightly longer.
	Doors are opened too frequently or too long.	Warm food will cause the refrigerator to run longer until the desired temperature is reached.
	Refrigerator or freezer door may be slightly open.	Warm air entering the refrigerator causes it to run more. Open the door less often.
	Refrigerator control is set too cold.	Make sure the refrigerator is level. Keep food and containers from blocking the door. See
	Refrigerator or freezer gasket is dirty, worn, cracked, or poorly	problem section.  OPENING/CLOSING of Doors.  Set the refrigerator control to a warmer setting until the

Refrigerator compressor does not run.	Thermostat is keeping the refrigerator at a constant temperature.	This is normal. The Refrigerator goes on and off to keep the temperature
Temperatures are too cold	T.	
Temperature in the freezer is too cold but the Refrigerator Temperature is Satisfactory.		Set the freezer control to a warmer setting until the freezer temperature is satisfactory.
Temperature in the refrigerator is too cold and the freezer temperature is satisfactory.	Refrigerator control is set too cold.	Set the refrigerator control to a warmer setting
Food stored in drawers freezes.	Refrigerator control is set too cold.	See above solution.
Meat stored in fresh meat drawer freezes.	Meat should be stored at a temperature just below the freezing point of water	It is normal for ice crystals to form due to the moisture content of meat.
Temperatures are too warm		
Temperatures in the refrigerator or freezer are too warm.	Freezer control is set too warm.	Set the freezer or refrigerator control to a colder setting until the freezer or refrigerator temperature
	Refrigerator control is set too warm. Refrigerator control has some effect on freezer temperature.	Set the freezer or refrigerator control to a colder setting until the freezer or refrigerator temperature
	Doors are opened too frequently or too long.	Warm air enters the refrigerator/ freezer whenever the door is opened. Open the door less often.
	Door is slightly open.	Close the door completely.
	Large amounts of warm or hot food may have been stored recently.	Wait until the refrigerator or freezer has had a chance to reach
	Refrigerator has recently been disconnected for a period of time.	A refrigerator requires some hours to cool down completely.
Temperature in the refrigerator is too warm but the freezer temperature is satisfactory.	Refrigerator control is set too warm.	Set the refrigerator control to a colder setting.

Sound and Noise		
Louder sound levels when Refrigerator is on.	Today's refrigerators have increased storage capacity and maintain more	It is normal for sound levels to be higher.
Louder sound levels when compressor comes on.	Refrigerator operates at higher pressures during the start of the CN cycle.	This is normal. The sound will level off as the refrigerator continues to run.
Vibrating or rattling noise.	Floor is uneven or weak. Refrigerator rocks on the floor when it is moved slightly.	Be sure floor is level and solid and can adequately support refrigerator.
	Items placed on the top of the	Remove items.
	Dishes are vibrating on the shelves in the refrigerator.	It is normal for dishes to vibrate slightly. Move dishes slightly.  Make sure refrigerator is level and firmly set on floor.
	Refrigerator is touching wall or	Move refrigerator so that it does not
Water/Moisture /Ice Inside Refrigerator		
Moisture collects on the inside walls of the refrigerator.	The weather is hot and humid which increases the rate of frost buildup and internal sweating.	This is normal.
	Door is slightly open.	See problem section Opening/Closing of doors.
	Door is opened too often or too long.	Open the door less often.
Water/Moisture/Ice Outside Refrigerator		
Moisture forms on the outside of the refrigerator or between doors.	Weather is humid.	This is normal in humid weather. When humidity is lower, the moisture should disappear.
2. 2011.001. 400701	Door is slightly open, causing cold air from the inside the refrigerator to meet warm air from the outside.	This time, close the door completely.

Odors in Refrigerator		
	Interior needs to be cleaned.	Clean interior with sponge, warm water and baking soda.
	Food with strong odor is in the	Cover food completely.
	Some containers and wrapping materials produce odors.	Use a different container or brand
Opening/Closing of Doors/Drawers		
Door(s) will not close.	Food package is keeping door open.	Move packages that keep door from
Door(s) will not close.	Door was closed too hard, causing other door to open slightly.	Close both doors gently.
	Refrigerator is not level. It rocks on the floor when it is moved slightly.	Adjust the height adjusting screw.
	Floor is uneven or weak. Refrigerator rocks on the floor	Be sure floor is level and can adequately support refrigerator.  Contact carpenter to correct sagging
	Refrigerator is touching wall or	
Drawers are difficult to move.	Food is touching shelf on top of the	Keep less food in drawer.
