BOTTOM FREEZER REFRIGERATOR WARRANTY - CANADA

Kenmore Appliance Warranty

One Year Limited Warranty
When installed, operated and maintained according to all instructions supplied with the product, if this appliance fails due to a defect in material or workmanship within one year from the date of purchase, call 1-800-4-MY-HOME to arrange for free repair.
If this appliance is used for other than private family purposes, this warranty applies for only 90 days from th date of purchase.

This Warranty covers only defects in material and workmanship. Sears will NOT pay for:
1. Expendable items that can wear out from normal use, including but not limited to filters, belts, light bulbs, and bags.
2. A service technician to instruct the user in correct product installation, operation or maintenance.
3. A service technician to clean or maintain this product.
4. Damage to or failure of this product if it is not installed, operated or maintained according to all instructions supplied with the product.
5. Damage to or failure of this product resulting from accident, abuse, misuse or use for other than its intended purpose.
6. Damage to or failure of this product caused by the use of detergents, cleaners, chemicals or utensils other than those recommended in all instructions supplied with the product.
7. Damage to or failure of parts or systems resulting from unauthorized modifications made to this product.

Disclaimer of implied warranties; limitation of remedies
Customer's sole and exclusive remedy under this limited warranty shall be product repair as provided herein. Implied warranties, including warranties of merchantability or fitness for a particular purpose, are limited to one year or the shortest period allowed by law. Sears shall not be liable for incidental or consequential damages.

Some states and provinces do not allow the exclusion or limitation of incidental or consequential damages, or limitations on the duration of implied warranties of merchantability or fitness, so these exclusions or limitations may not apply to you.

This warranty applies only while this appliance is used in the United States and Canada.
This warranty gives you specific legal rights, and you may also have other rights which vary from state to state.

Sears, Roebuck and Co., Dept. 817WA, Hoffman Estates, IL 60179

PROTECTION AGREEMENTS

Master Protection Agreements

Congratulations on making a smart purchase. Your new Kenmore® product is designed and manufactured for years of dependable operation. But like all products, it may require preventive maintenance or repair from time to time. That's when having a Master Protection Agreement can save you money and aggravation.

The Master Protection Agreement also helps extend the life of your new product. Here's what the Agreement* includes:

- **Parts and labor** needed to help keep products operating properly **under normal use**, not just defects. Our coverage goes **well beyond the product warranty.** No deductibles, no functional failure excluded from coverage - **real protection.**
- **Expert service** by a force of more than 10,000 authorized **Sears service technicians**, which means someone you can trust will be working on your product.
- **Unlimited service calls and nationwide service,** as often as you want us, whenever you want us.
- **"No-lem on" guarantee** - replacement of your covered product if four or more product failures occur within twelve months.
- **Product replacement** if your covered product can't be Fixed.
- **Annual Preventive Maintenance Check** at your Request - no extra charge.
- **Fast help by phone** - we call it **Rapid Resolution** - phone support from a Sears representative on all products. Think of us as a "talking owner's manual."
- **Power surge protection** against electrical damage due to power fluctuations.
- **$250 Food Loss Protection** annually for any food spoilage that is the result of mechanical failure of any Covered refrigerator or freezer.
- **Rental reimbursement** if repair of your covered product takes longer than promised.
- **10% discount** off the regular price of any non-covered repair service and related installed parts.

Once you purchase the Agreement, a simple phone call is all that it takes for you to schedule service. You can call anytime day or night, or schedule a service appointment online.

The Master Protection Agreement is a risk free purchase. If you cancel for any reason during the product warranty period, we will provide a full refund. Or, a prorated refund anytime after the product warranty period expires. Purchase your Master Protection Agreement today!

Some limitations and exclusions apply. For prices and additional information in the U.S.A. call 1-800-827-6655.

***Coverage in Canada varies on some items. For full details call Sears Canada at 1-800-361-6655.**

Sears Installation Service
For Sears professional installation of home appliances, garage door openers, water heaters, and other major home items, in the U.S.A. or Canada call **1-800-4-MY-HOME®.**

PRODUCT RECORD

In the space below, record the date of purchase, model and serial number of your product. You will find the model and serial number printed on an identification label located on the right-hand side of the refrigerator compartment. Have these items of information available whenever you contact Sears concerning your product.

Model No. _____ Date of Purchase _____

Serial No. _____ Dealer _____

Save these instructions and attach your sales receipt for future reference.

IMPORTANT SAFETY INSTRUCTIONS

SAFETY MESSAGES

This guide contains many important safety messages. Always **read and obey** all safety messages.

This is the safety alert symbol. It alerts you to safety messages that inform you of hazards that can kill or hurt you or others, or cause damage to the product.

All safety messages will be preceded by the safety alert symbol and the hazard signal word DANGER, WARNING, or CAUTION. These words mean:

⚠ DANGER — You **will** be killed or seriously injured if you don't follow instructions.

⚠ WARNING — You **can** be killed or seriously injured if you don't follow instructions.

⚠ CAUTION — Indicates an imminently hazardous situation which, if not avoided, **may** result in minor or moderate injury, or product damage only.

All safety messages will identify the hazard, tell you how to reduce the chance of injury and tell you what can happen if the instructions are not followed.

⚠ WARNING

To reduce the risk of fire, electric shock, or injury to persons when using your product, basic safety precautions should be followed, including the following:

Read all instructions before using this appliance:

- NEVER unplug your refrigerator by pulling on the power cord. Always grip the plug firmly and pull it straight out from the outlet.
- Repair or replace immediately all electric service cords that have become frayed or otherwise damaged. Do not use a cord that shows cracks or abrasion damage along its length or at either the plug or connector end.
- Do not modify or extend the power cord lenght. It could cause electric shock or fire.
- When moving your refrigerator away from the wall, be careful not to roll over or damage the power cord.
- DO NOT store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.
- DO NOT allow children to climb, stand, or hang on the refrigerator doors or shelves in the refrigerator. They could damage the refrigerator and seriously injure themselves.
- Keep fingers out of "pinch point" areas; clearances between the doors and cabinet are necessarily small. Be careful when you open the doors when children are in the area.
- Unplug your refrigerator before cleaning or making any repairs. **NOTE:** We strongly recommend that any service should be performed by a qualified technician.
- Before replacing a burned-out light bulb, **unplug** the refrigerator or turn off power at the circuit breaker or fuse box in order to avoid contact with a live wire filament. (A burned-out light bulb may break when being replaced.) **NOTE:** Setting either or both controls to the OFF position does not remove power to the light circuit.

  NOTE: Some models have LED interior lighting and service should be perfomed by a qualified technician.
- When you are finished, reconnect the refrigerator to the electrical source and reset the controls. (Thermostat, Refrigerator Control, and or Freezer Control, depending on the model) to the desired setting.
- This refrigerator must be properly installed in accordance with the **Attention Installer Instructions** that were taped to the front of the refrigerator.
- After your refrigerator is in operation, do not touch the cold surfaces in the freezer compartment when hands are damp or wet. Skin may adhere to the extremely cold surfaces.
- In refrigerators with automatic icemakers, avoid contact with the moving parts of the ejector mechanism, or with the heating element that releases the cubes. DO NOT place fingers or hands on the automatic icemaking mechanism while the refrigerator is plugged in.
- DO NOT refreeze frozen foods which have thawed completely. The United States Department of Agriculture in Home and Garden Bulletin No. 69 says:

  "...You may safely refreeze frozen foods that have thawed if they still contain ice crystals or if they are still cold below 40°F (4°C)."

  "...Thawed ground meats, poultry, or fish that have any off-odor or off-color should not be refrozen and should not be eaten. Thawed ice cream should be discarded. If the odor or color of any food is poor or questionable, get rid of it. The food may be dangerous to eat."

  "Even partial thawing and refreezing reduces the eating quality of foods, particularly fruits, vegetables and prepared foods. The eating quality of red meats is affected less than that of many other foods. Use refrozen foods as soon as possible to save as much of their quality as you can."

SAVE THESE INSTRUCTIONS

⚠ DANGER: RISK OF CHILD ENTRAPMENT

Junked or abandoned refrigerators are still dangerous... even if they will sit for “just a few days”. If you are getting rid of your old refrigerator, please follow the instructions at right to help prevent accidents.

BEFORE YOU THROW AWAY YOUR OLD REFRIGERATOR OR FREEZER

- Take off the doors.
- Leave the shelves in place so that children may not easily climb inside.

CFC DISPOSAL

Your old refrigerator may have a cooling system that used CFCs (chlorofluorocarbons). CFCs are believed to harm stratospheric ozone.

This appliance contains fluid (refrigerant, lubricant), is made of parts and materials which are reusable and / or recyclable. All the important materials should be sent to the collecton center of waste material and can be reused after rework (recycling).

For take back, please contact with the local agency.

If you are throwing away your old refrigerator, make sure the CFC refrigerant is removed for proper disposal by a qualified servicer. If you intentionally release this CFC refrigerant, you can be subject to fines and imprisonment under provisions of environmental legislation.

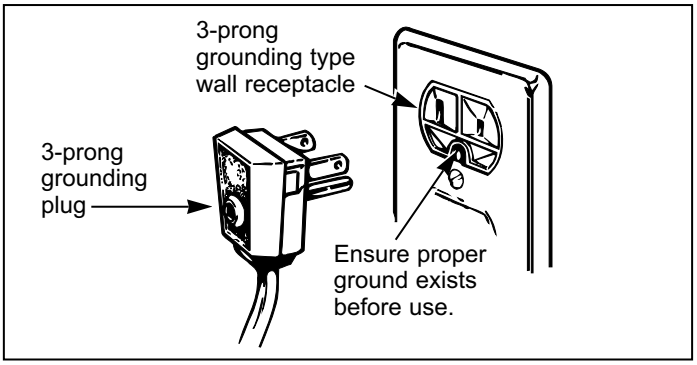

GROUNDING REQUIREMENTS

IMPORTANT: Please read carefully.
TO CONNECT ELECTRICITY

⚠ WARNING

Electrical Shock Hazard

FOR PERSONAL SAFETY, this appliance must be properly grounded. Have the wall outlet and the circuit checked by a qualified electrician to make sure the outlet is properly grounded.

RECOMMENDED GROUNDING METHOD

The refrigerator should always be plugged into its own individual properly grounded electrical outlet rated for 115 Volts, 60 Hz, AC only, and fused at 15 or 20 amperes. This provides the best performance and also prevents overloading house wiring circuits which could cause a fire hazard from overheated wires. It is recommended that a separate circuit serving only this appliance be provided. Use a receptacle which cannot be turned off with a switch or pull chain. Do not use an extension cord.

Where a standard two-prong wall outlet is encountered, it is your personal responsibility and obligation to have it replaced with a properly grounded three-prong wall outlet.

Do not, under any circumstances, cut or remove the third (ground) prong from the power cord.

NOTE: Before performing any type of installation, cleaning, or removing a light bulb, turn the control (Thermostat, Refrigerator Control or Freezer Control, depending on the model) to OFF and then disconnect the refrigerator from the electrical source. When you are finished, reconnect the refrigerator to the electrical source and reset the control (Thermostat, Refrigerator Control or Freezer Control, depending on the model) to the desired setting.

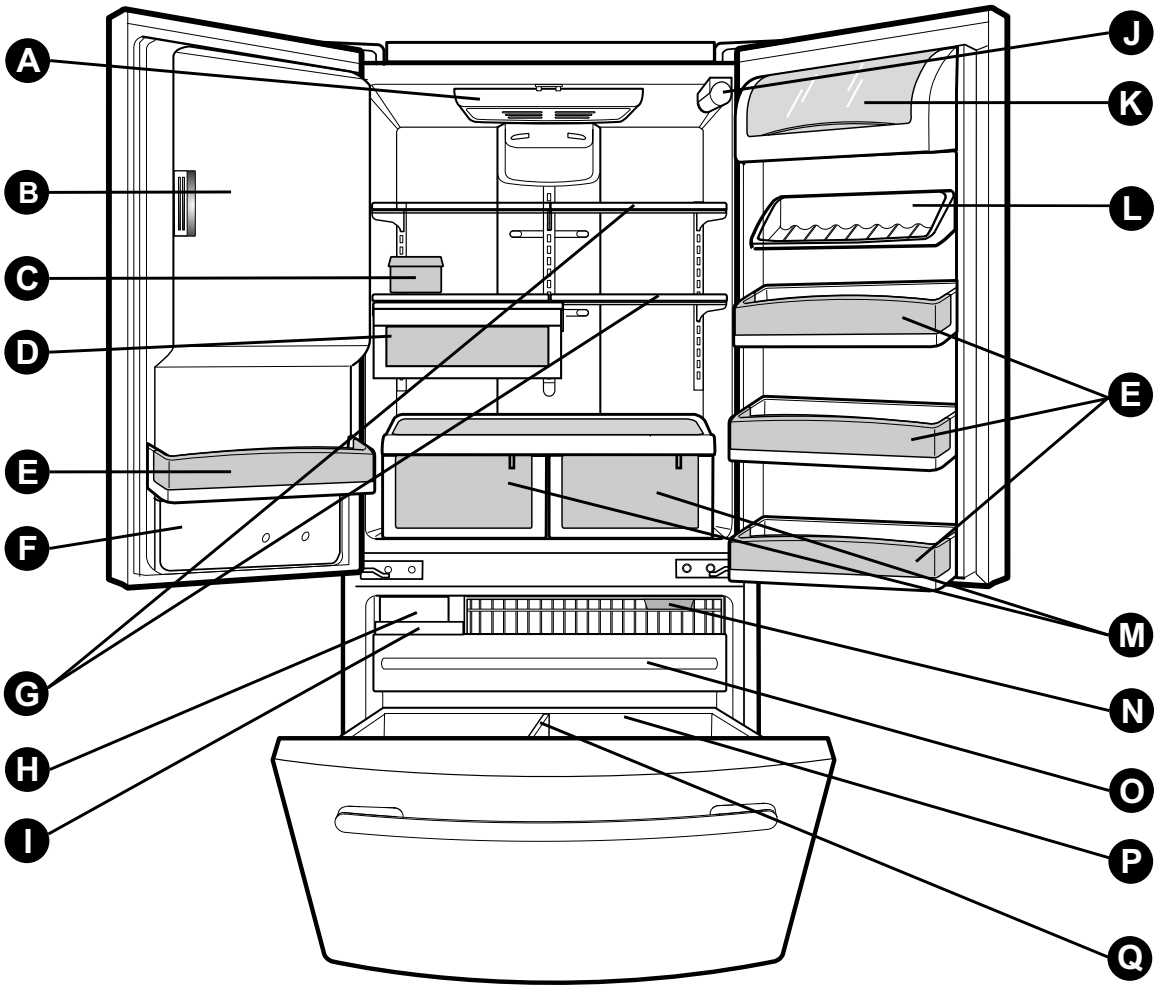

NOTE: Some models have LED interior lighting and service should be perfomed by a qualified technician.

USE OF EXTENSION CORDS

Because of potential safety hazards under certain conditions, we strongly recommend against the use of an extension cord. However, if you still select to use an extension cord, it is absolutely necessary that it be a UL-listed (in the United States), 3-wire grounding type appliance extension cord having a grounding type plug and outlet, and that the electrical rating of the cord be 15 amperes (minimum) and 120 volts.

Use of an extension cord will increase the clearance needed for the back of the refrigerator.

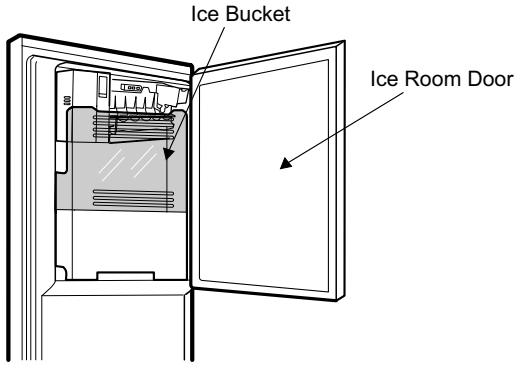

PARTS AND FEATURES

Use this section to become more familiar with the parts and features.

NOTE: This guide covers several different models. The refrigerator you have purchased may have some or all of the items listed below. The locations of the features shown below may not match your model.

- **A** Refrigerator Light
- **B** Ice Room (Ice Maker and Ice Bucket)
- **C** Egg Box
- **D** Snack Pan
- **E** Modular Door Bins
- **F** Water Tank Cover
- **G** Refrigerator shelves
- **H** Turbo Motor
- **I** Ice Bin
- **J** Filter Inside
- **K** Dairy Corner
- **L** Can Rack*
- **M** Crisper
- **N** Freezer Light
- **O** Pull out Drawer
- **P** Durabase
- **Q** Divider

* On some models

REFRIGERATOR INSTALLATION

⚠ WARNING

Excessive Weight Hazard

Use two or more people to move and install refrigerator.

Failure to do can affect back or other injury.

UNPACKING YOUR REFRIGERATOR

Remove tape and any temporary labels from your refrigerator before using. Do not remove any warning-type labels, the model and serial number label, or the TechSheet that is attached to back wall of the refrigerator.

To remove any remaining tape or glue, rub the area briskly with your thumb. Tape or glue residue can also be easily removed by rubbing a small amount of liquid dish soap over the adhesive with your fingers. Wipe with warm water and dry.

Do not use sharp instruments, rubbing alcohol, flammable fluids, or abrasive cleaners to remove tape or glue. These products can damage the surface of your refrigerator. For more information, see the **Important Safety Instructions** section.

Refrigerator shelves are installed in the shipping position.

Please reinstall shelves according to your individual storage needs.

⚠ WARNING

When Moving Your Refrigerator:

Your refrigerator is heavy. When moving the refrigerator for cleaning or service, be sure to protect the floor. Always pull the refrigerator straight out when moving it. Do not wiggle or walk the refrigerator when trying to move it, this could damage the floor.

⚠ WARNING

Explosion Hazard

Keep flammable materials and vapors, such as gasoline, away from refrigerator.

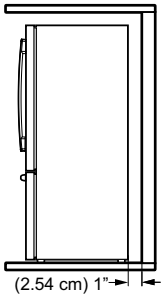

Failure to do can result in death, explosion or, fire.

INSTALLATION

1. To avoid vibration, the unit must be leveled. If required, adjust the leveling screws to compensate for unevenness of the floor. The front should be slightly higher than the rear to aid in door closing. Leveling screws can be turned easily by tipping the cabinet slightly. Turn the leveling screws clockwise ( ) to raise the unit, counterclockwise ( ) to lower it.
2. Install this appliance in an area where the temperature is between 55°F (13°C) and 110°F (43°C). If the temperature around the appliance is too low or high, cooling ability may be adversely affected.

A proper distance from adjacent items

Please keep the refrigerator at a proper distance from other things. Too small a distance from adjacent items may result in lowered freezing capability and increased electricity consumption charges.

⚠ **CAUTION:** Avoid placing the unit near heat sources, direct sunlight or moisture.

NEXT

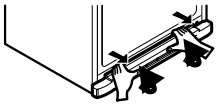

1. Clean your refrigerator thoroughly and wipe off all dust accumulated during shipping.
2. Install accessories such as ice cube bin, drawers, shelves, etc., in their proper places. They are packed together to prevent possible damage during shipment.
3. Let your refrigerator run for 2 or 3 hours before putting food in it. Check the flow of cold air in the freezer compartment to ensure proper cooling. Your refrigerator is now ready for use.

⚠WARNING:

- Be careful when you work with hinge, base grille, stopper etc. You may be injured.
- Do not put hands or metal sticks into air vents, base grille, or bottom of refrigerator. You may be injured or receive an electrical shock.

BASE GRILLE

To remove the base grille

1. Grasp the grille with both hands.
2. Pull the grille toward yourself.

To install the base grille

1. Place clips in openings in the metal panel.
2. Push the grille toward the refrigerator until it snaps into place.

REFRIGERATOR INSTALLATION

NOTE: It is “always” recommeded that the doors be removed when it is necessary to move the refrigerator through a narrow opening. If it is necessary to remove the handles follow the directions below.

HOW TO REMOVE DOOR HANDLES

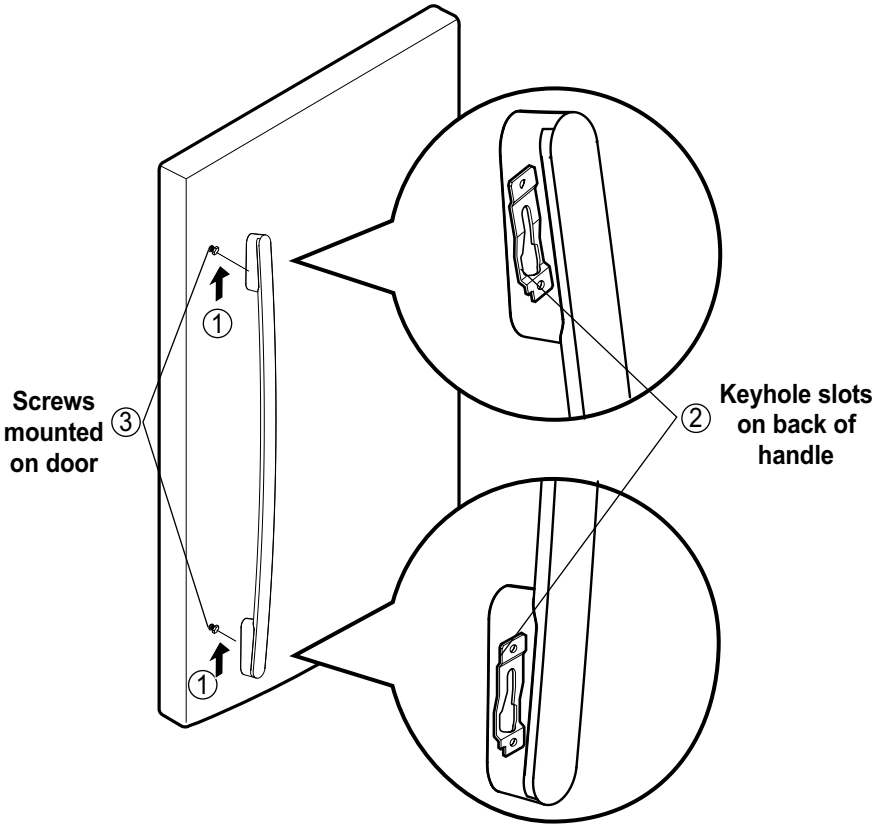

NOTE: Handle appearance may vary from illustrations on this page.

1. Removing Refrigerator Handle

- Grasp the handle tightly with both hands and slide the handle up (1)(this may require some force).
- The keyhole slots (2) on the back of the handle allow the handle to separate from the mounting screws (3).

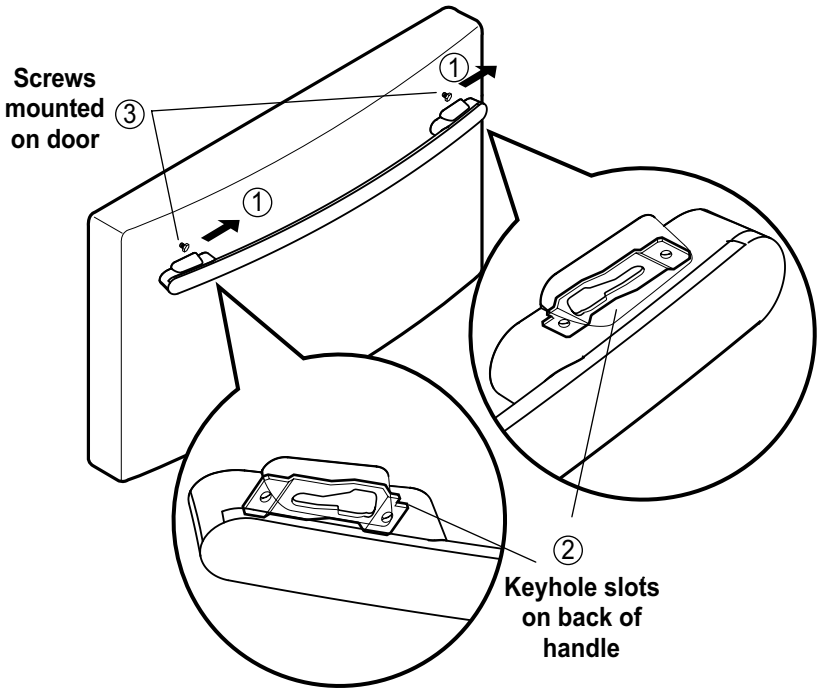

⚠**CAUTION:** The handle could be damaged if you hit it with a hammer while removing or attaching.

⚠**CAUTION:** When you assemble or disassemble handle, you must push or pull with reasonable force.

2. Removing Freezer Drawer Handle

- Press the handle against door first.
- Grasp the handle tightly with both hands and slide the handle to right (1)(this may require some force).
- The keyhole slots (2) on the back of the handle allow the handle to separate from the mounting screws (3).

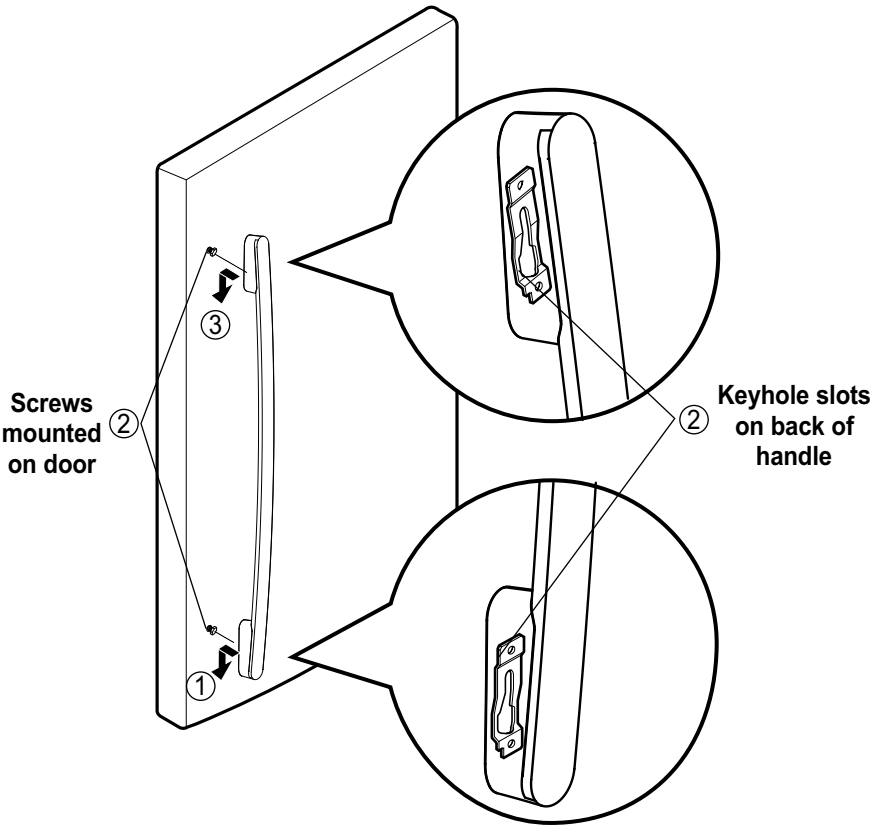

HOW TO REPLACE DOOR HANDLES

NOTE: Handle appearance may vary from illustrations on this page.

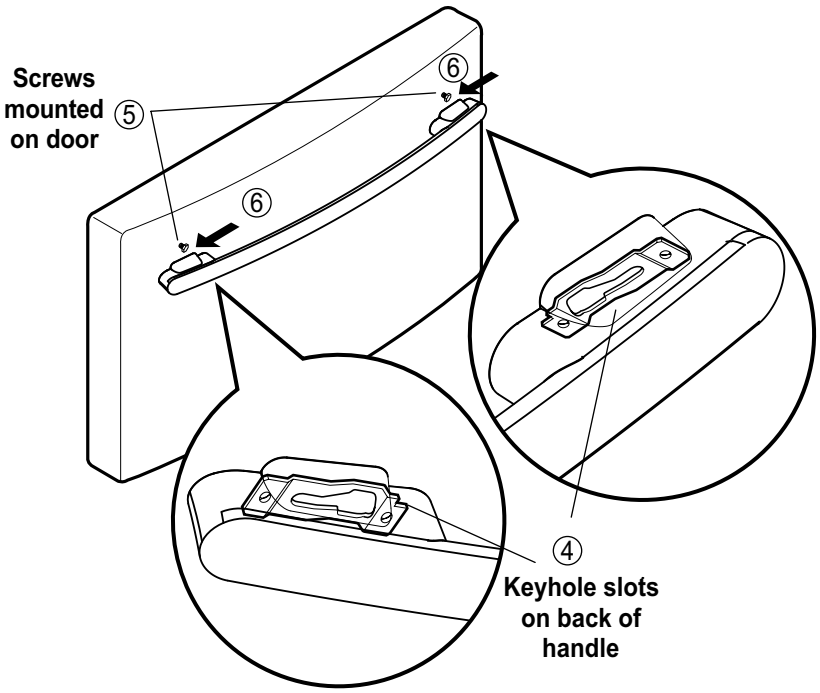

1. Reinstalling the Refrigerator Door Handle

- Align keyhole slots (1) on the top and bottom of the back of the handle with the screws (2) mounted on the front of the door.
- Press the handle against the door front, making sure that the screws (2) go into the keyhole slots (1).
- Holding the handle with both hands, press it firmly against the front of the door and slide the handle down (3).

2. Reinstalling the Freezer Drawer Handle

- Align keyhole slots (4) on the right and left sides of the back of the handle with the screws (5) mounted on the front of the drawer.
- Press the handle against the drawer front, making sure that the screws (5) go into the keyhole slots (4).
- Holding the handle with both hands, press it firmly against the front of the drawer and slide the handle to the left (6).

REFRIGERATOR INSTALLATION

REMOVING REFRIGERATOR DOORS

1. Removing Refrigerator Door

NOTE: Handle appearance may vary.

IMPORTANT: Before you begin, turn the refrigerator OFF and unplug it. Remove food and any bins from doors.

► Left Door

- Loosen the screws and remove the cove on back side (see figure A).
- Disconnect water supply tube by pushing back on the disconnect ring (3).
- Loosen the cover screw (1).
- Disconnect door switch wire (2).
- Pull out the tube (4).

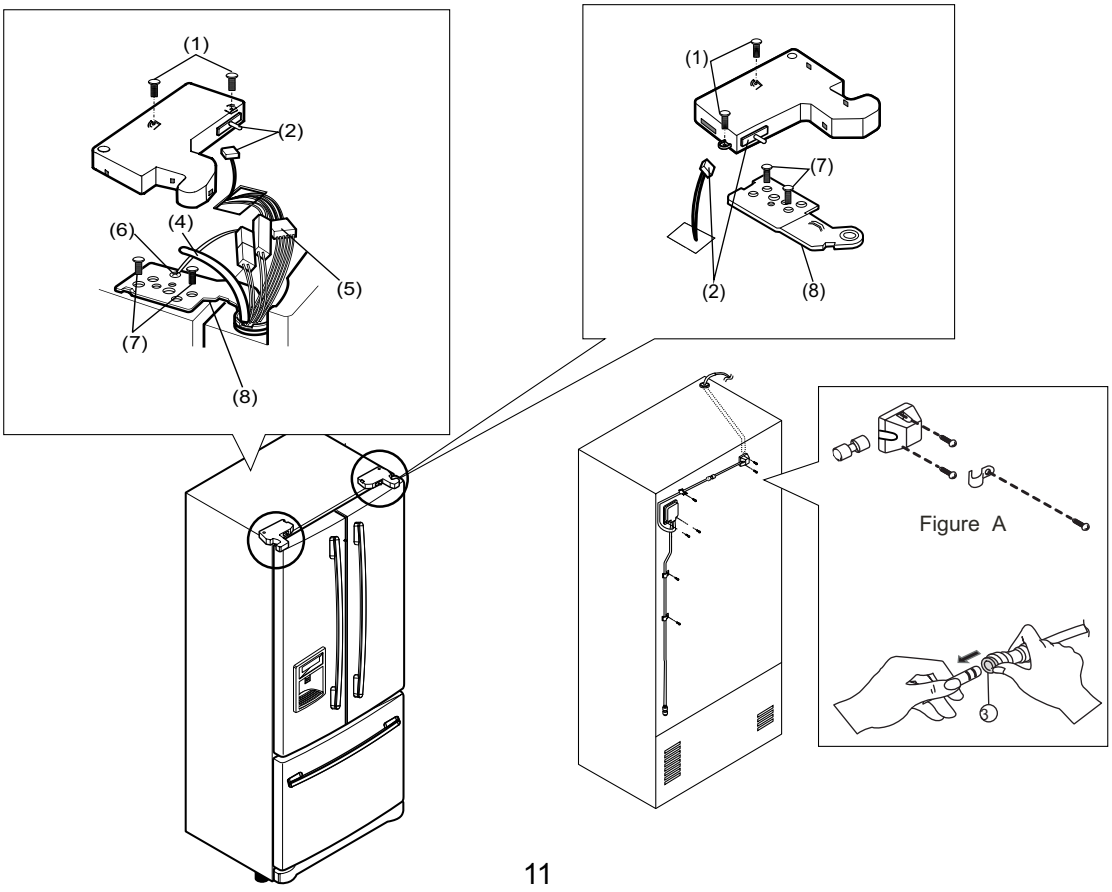

⚠ CAUTION: If a tube end is deformed or worn out, cut the damaged portion away.

- Disconnect wire harness (5).
- Remove the ground screw (6).
- Loosen screws (7) and lift off the top hinge (8).
- Place the door on a non-scratching surface with the inside up.

⚠ CAUTION: When removing top hinge, be careful that the door does not fall forward.

► Right Door

- Loosen the cover screw (1).
- Disconnect door switch wire (2).
- Loosen screws (7) and lift off the top hinge (8).
- Place the door on a non-scratching surface with the inside up.

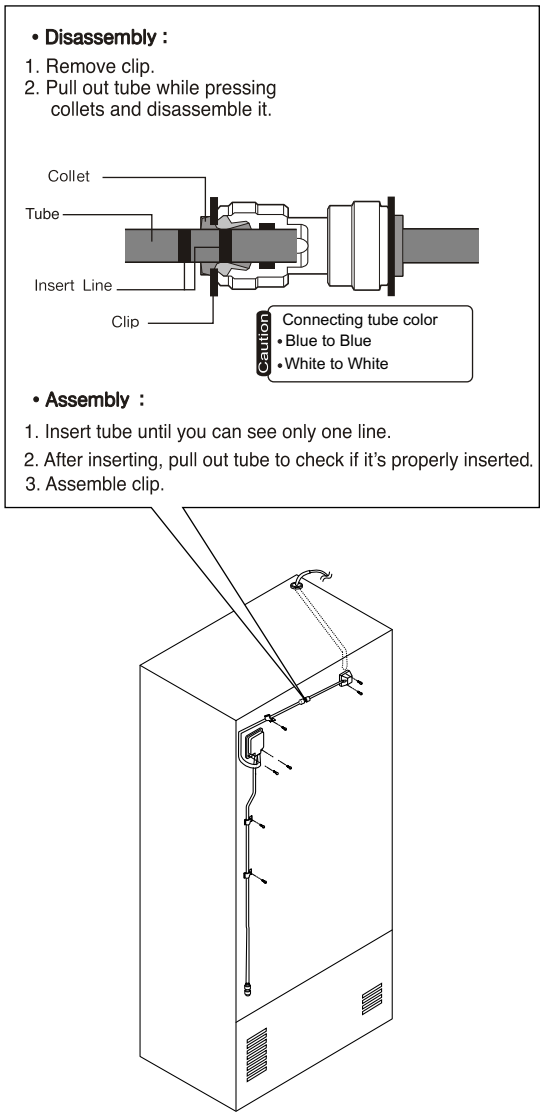

2.Replacing Refrigerator Door

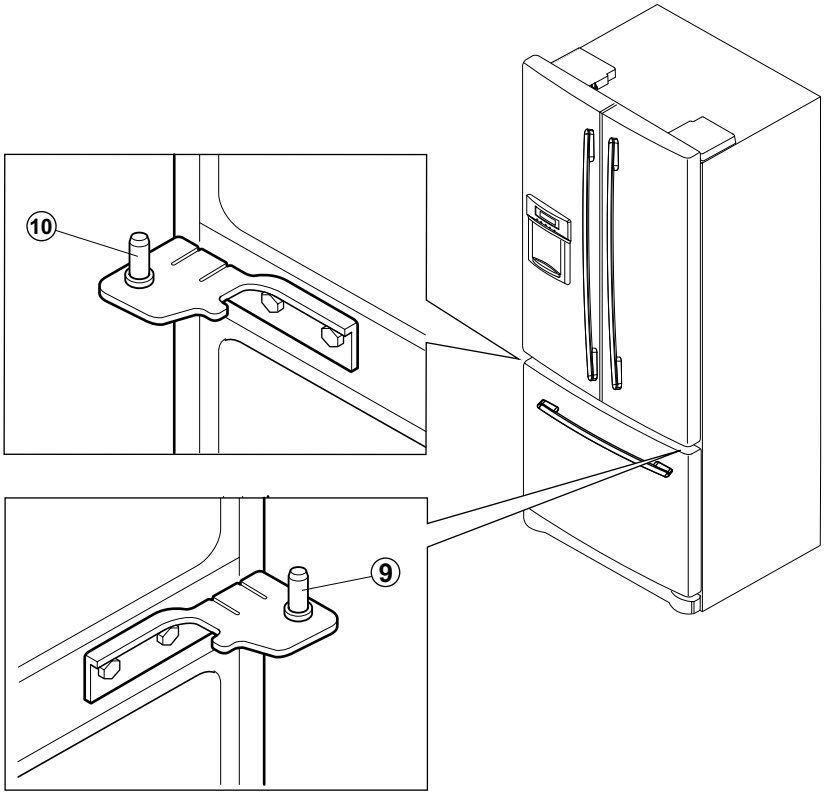

▶ Right Door

- Lower the door onto the middle hinge pin (9). Make sure the door is aligned with the cabinet.
- Replace the top hinge (8) installing hinge screws (7) to secure it.
- Make sure the gasket on the door is flush against the cabinet and is not folded. Support the door on the handle side while securing hinge. Make sure the door is straight and the gap between the doors is even.
- Connect the door switch wire (2).
- Tighten the cover screw (1).

▶ Left Door

- Lower the door onto the middle hinge pin (10). Make sure the door is aligned with the cabinet.
- Replace the top hinge (8) installing hinge screws (7) to secure it.
- Make sure the gasket on the door is flush against the cabinet and is not folded. Support the door on the handle side while tightening. And make sure the door is straight and the gap between the doors is even.
- Insert the water supply tube (4) into the connector tube until you see only one scale mark. (Fully insert the tube over 5/8”(15 mm)).
- Install the ground screw (6) and connect the wire harness (5).
- Connect the door switch wire (2).
- Tighten the cover screw (1).

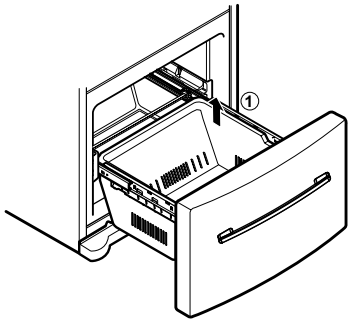

HOW TO REMOVE AND INSTALL THE PULLOUT DRAWER

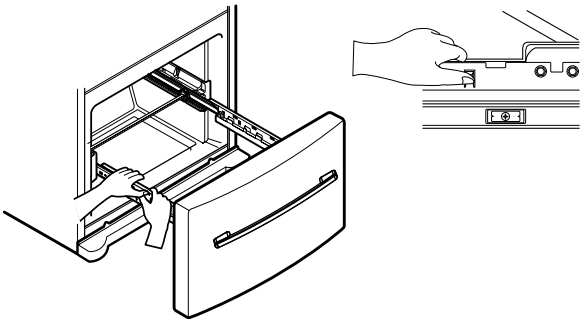

IMPORTANT: To avoid possible injury, product or property damage, you will need two people to perform the following instructions.

1. Removing Pullout Drawer

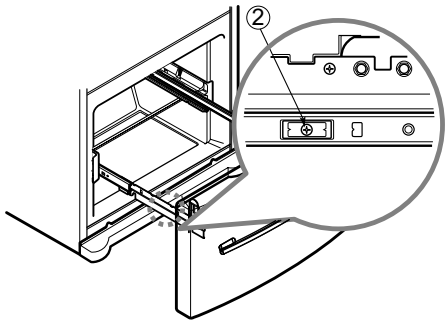

- Pull the drawer open to full lower extension. Remove the lower basket (1) by lifting basket from rail system. (If you tilt the door, it will be easier.)

- Press both hangers with your thumbs to lift it up.
- Separate the left and right rail cover.

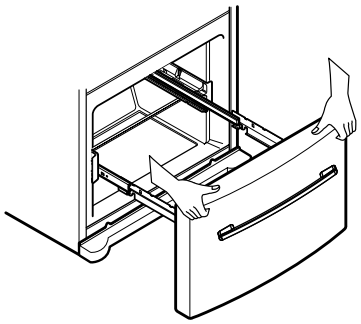

- Remove the screws(2) of the rail on both sides.

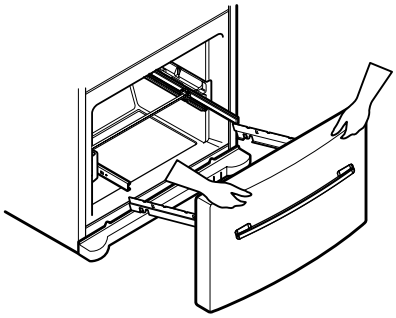

⚠ **CAUTION:** When you remove the drawer, do not hold handle. If it comes off, it could cause personal injury.

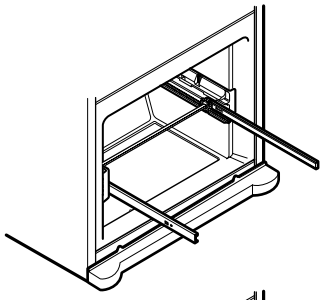

⚠ **CAUTION:** When laying down the drawer, be careful not to damage the floor or hurt your feet by the sharp edges on hinge side.

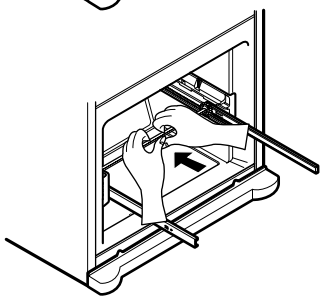

- With both hands, hold both sides of the door and pull it up to separate it from the rails.

- With both hands, hold the center of the bar and push it in to let both rails fitted simultaneously.

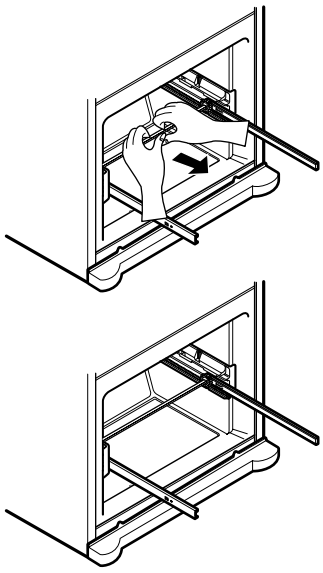

HOW TO REMOVE AND INSTALL THE PULLOUT DRAWER

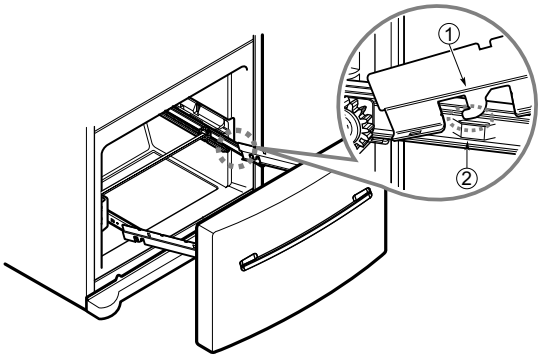

IMPORTANT: To avoid possible injury or product or property damage, you will need two people to perform the following instructions.

2. Installing Pullout Drawer

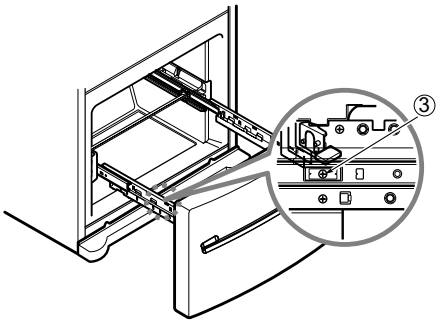

- With both hands, hold the center of the bar and pull it out to let both rails out to full extension simultaneously.

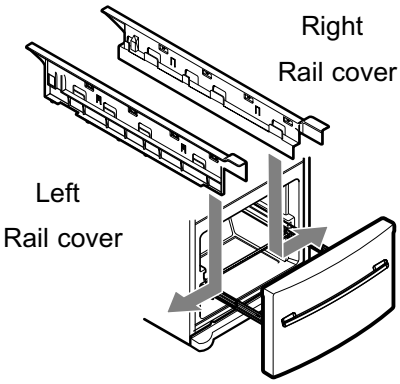

- Hook door supports (1) into rail tabes (2) .

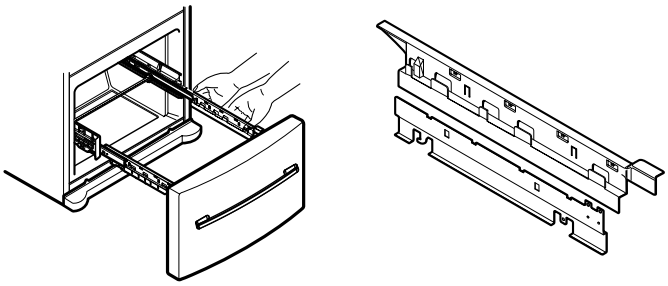

- Lower door into final position and tighten the screws (3)

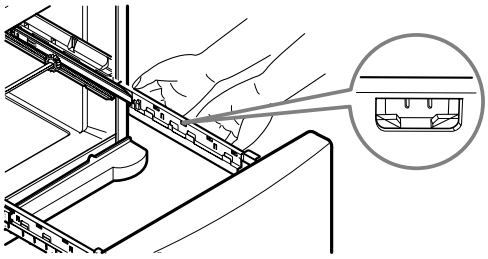

- Make sure you have a right rail cover for each side.

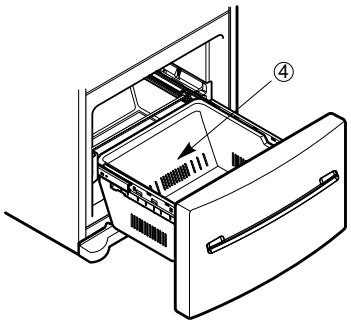

- Align the top holes of the rail cover with the top holes of the door supports to assemble the rail cover.

Assembly hole

- With the drawer pulled out to full extension, insert the lower basket (4) in the rail assembly.

⚠ **WARNING:** To prevent accidental child and pet entrapment or suffocation risk. DO NOT allow them to play inside of drawer.

⚠ **WARNING:** DO NOT step or sit down on Freezer Door.

LEVELING AND DOOR ALIGNMENT

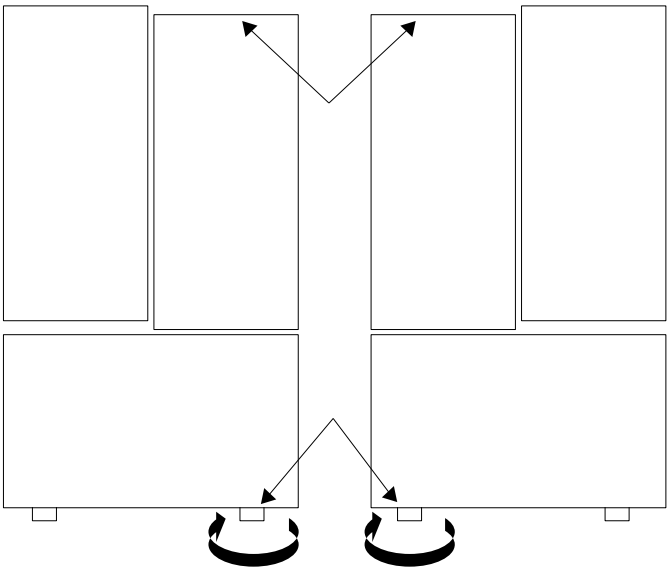

Leveling

Your refrigerator has two front leveling screws. One on the right and one on the left. If your refrigerator seems unsteady or you want the doors to close easier, adjust the Refrigerator's tilt using the instructions below:

1. Plug the refrigerator's power cord into a 3-prong grounded outlet. Move the refrigerator into its final position. Remove the base cover.

2. Turn the leveling screw clockwise to raise that side of the refrigerator or counterclockwise to lower it. It may take several turns of the leveling screw to adjust the tilt of the refrigerator.

NOTE: Having someone push against the top of the refrigerator takes some weight off the leveling screws. This makes it easier to adjust the screws.

3. Open both doors again and check to make sure that they close easily. If not, tilt the refrigerator slightly more to the rear by turning both leveling screws clockwise. It may take several more turns, and you should turn both leveling screws the same amount.

4. Re-adjust if necessary.

5. Replace the base cover.

NOTE: Your new refrigerator is uniquely designed with two fresh food doors. Either door can be opened or closed independently of one another. You may have to exert slight pressure on doors to get them to close completely.

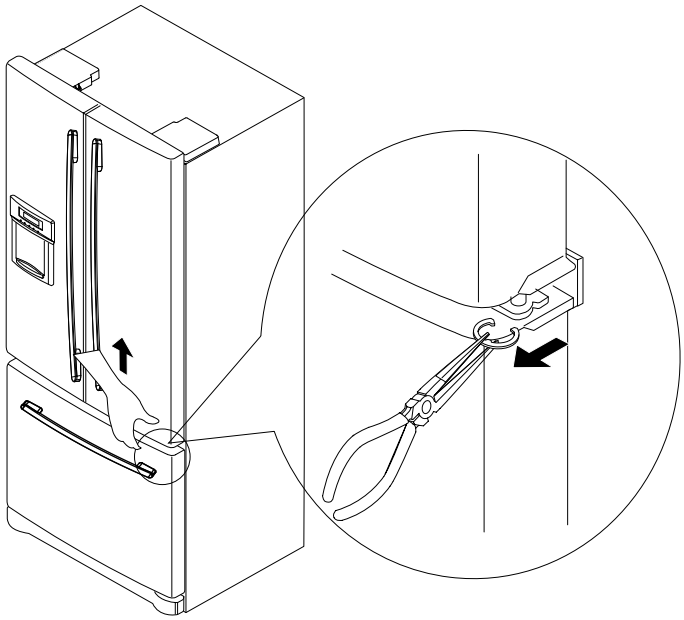

Door Alignment

If the space between your doors is uneven, follow the instructions below to align the doors:

1. With one hand, lift up the door you want to raise at middle hinge.

2. With other hand, use pliers to insert snap ring as shown.

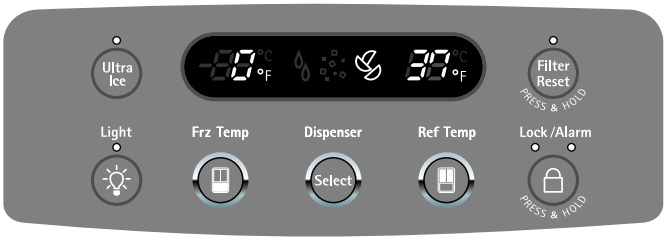

3. Insert additional snap rings until the doors are aligned. (Three snap rings are provided with the refrigerator).

SETTING THE CONTROLS

Temperature

- Your refrigerator has a control pad on the dispenser that lets you regulate the temperature in the freezer and refrigerator compartments.
- Initially set the refrigerator control at 37°F (3°C) and the freezer control at 0°F (–18°C). Leave it at this setting for 24 hours (one day) to stabilize. Then adjust the compartment temperature as desired.

- Every time you press the freezer temperature adjust button, the temperature changes in a circulating order of “0”, “-1”, “-2”, “-3”, “-4”, “-6”, “8”, “6”, “5”, “4”, “3”, “2”, “1”, “0”.
- Every time you press the refrigerator temperature adjust button, the temperature changes in a circulating order of “37”, “36”, “35”, “34”, “33”, “46”, “45”, “44”, “43”, “42”, “41”, “40”, “39”, “38”, “37”.

Ultra Ice

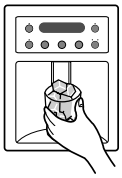

- When you press the “Ultra Ice” button, the graphic [Ultra Ice] will light up in the display and it continues for 24hours. It will automatically shut o after 24hours have passed.
  Or you can stop this function manually by pressing the button one more time.
- This function increases both icemaking and freezing capabilities.

Dispenser

- You can select water, crushed ice, or cubed ice by pressing Select button as you desire.

- There could be some dripping after dispensing. It is recommended to hold your cup for a couple of seconds after dispensing.

⚠ WARNING: The dispenser is desinged not to operate while either refrigerator door is left open.

Filter

- Filter Reset : When the FILTER RESET icon turns on, you have to change the water lter. Press the FILTER RESET button for 3 seconds to turn the icon off.
  You need to change the water filter approximately every 6 months.

Light

- The dispenser lighter is Light ○ (OFF) after applying the power, and when you press this button, the dispenser light is Light ● (ON).

Alarm

- When the power is connected to the refrigerator, door alarm is initially set ON and door alarm display will show Alarm ● (ON). When you press PRESS & HOLD button, the display will change to Alarm ○ (OFF) and door alram function is now activated.
- When either refrigerator or the freezer door is left open for more than 60 seconds, the alarm will ding to let you know the door is open.
- When you close the door, the door alarm will stop dinging.
- If you want to disable the door alarm function, press PRESS & HOLD button then the door alarm display will switched to Alarm ○ (OFF).

Lock

- When the power is initially connected to the refrigerator, Lock function is off.
- If you want to activate Lock function to lock other buttons, press and hold PRESS & HOLD button for 3 seconds or more. Lock ● (ON) sign will be displayed and the Lock function is now enabled.
- No buttons other than PRESS & HOLD button will work even including dispenser button while Lock function is enabled.
- To disable the Lock function, press and hold PRESS & HOLD button for 3 seconds or more.

Temperature Mode Switch Function(°F <->°C)

hold button and button simultaneously for 5 seconds or more.

Display OFF Mode:

- To activate this mode press and hold ULTRA ICE and FRZ TEMP key over 5 seconds until the lights turn off. If the display is touched or any door opens the lights will turn on after 20 seconds of inactivity the lights will turn off automatically.

  To exit display OFF Mode press and hold ULTRA ICE and FRZ TEM key over 5 seconds until the lights tilt.
  Display OFF Mode does not affect the temperature control settings of the unit.

  Note: This fuction is activate by default.

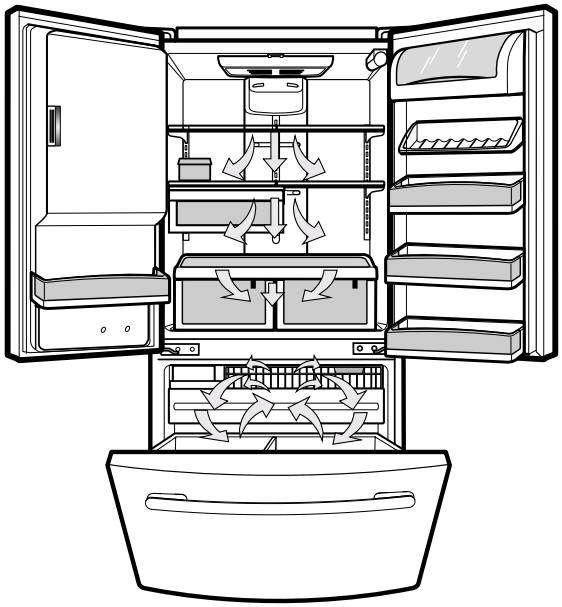

ENSURING PROPER AIR CIRCULATION

In order to ensure proper temperatures, air must flow between the refrigerator and freezer sections. As shown in the illustration below, air enters at top of the freezer and circulates down. From bottom of the freezer, air is forced up to top of refrigerator. Air enters refrigerator through top vent, then circulates and exists at bottom, where it returns to freezer.

MULTI-FLOW

Multi-Flow means powerful and effective cooling operation. This is especially noticeable when new food is placed in the refrigerator compartment.

If water or foreign substances enter the cool air vent while cleaning, efficiency will be lowered. In addition, if gasket is damaged, efficiency may be lowered because of escaping cool air.

Do not block any of cool air vents with food packages. If the vents are blocked, airflow will be interrupted and temperature and moisture problems may occur.

IMPORTANT: Because air circulates between both sections, any odors formed in one section will transfer to the other. You must thoroughly clean both sections to eliminate odors. To prevent odor transfer and drying out of food, wrap or cover foods tightly. (See the Food Storage Guide section for details.)

DOOR ALARM

With this feature you´ll listen a alarm when the freezer or refrigerator door is not closed within 1 minute after it is opened. These tones repeat every 30 seconds.

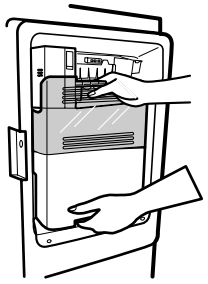

The alarm is canceled when the freezer or the refrigerator is closed correctly.

HOW TO USE A NEW DOOR ICE BUCKET

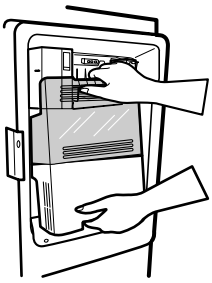

The ice maker will stop producing ice when ice bucket is full. If you need more ice, please use the extra ice bucket in freezer compartment so icemaker can keep producing ice.

How to remove the Door Ice Bucket.

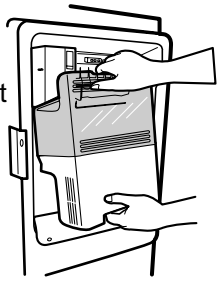

1 . Grip the handle as as shown in the picture.

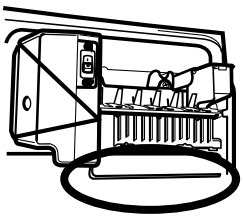

2. Lift the lower part slightly.

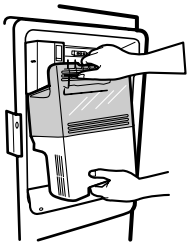

3. Take the ice bucket out slowly.

* Avoid touching the automatic shut off arm when replacing the ice bucket.

How to reinstall the Door Ice Bucket.

1. Replace ice bucket by slightly slanting it to avoid touching the ice maker.

⚠CAUTIONS

Throw away the first 20 ice cubes made, and the first 7 glass of dispensed water after installation.

This is also recommended if the refrigerator has not been used for a long time.

Keep children away from the dispenser.

Children may play with or damage the controls.

Storing cans or other items in the ice bucket may damage the icemaker.

Never use thin crystal glass or crockery to collect ice cubes.

Such glasses or containers may be broken.

Get ice cubes first into a glass before dispensing water.

Water may splash if it is done in opposite way..

Keep your hands and tools out of the ice room door and dispenser.

You could break something or injure yourself.

Shake the ice bucket occasionally to level the ice in it.

Sometimes the ice piles up near the icemaker, causing the icemaker to misread the amount of ice cubes and stop producing ice.

Never use narrow or deep glass.

Ice could be stuck inside dispenser chute and, the refrigerator could fail.

Keep the glass at a proper distance from dispenser chute.

A glass too close to the outlet may hinder ice from coming out.

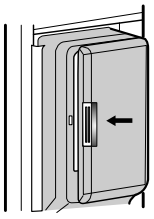

Keep the ice room door closed tightly after opening it.

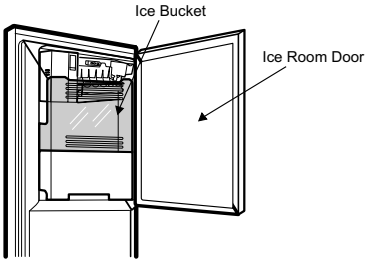

If the ice room door were not closed tightly, the cold air in the ice room would come into refrigerator compartment and freeze food.

This could cause the ice maker not to produce ice.

Close the ice room door until you hear the sound "Click".

When the door doesn't properly close, ice in the ice room could be melt, or frost and icicle could be formed within the refrigerator.

ADJUSTING CONTROL SETTINGS

Give the refrigerator time to cool down completely before making final adjustments. It is best to wait hours before doing this. The mid-settings indicated in the refrigerator usage.

The controls are set correctly when milk or juice is as cold as you like and when ice cream is firm.

The refrigerator control functions as the thermostat for the entire appliance (refrigerator and freezer sections.) The higher the number setting, the longer the compressor will run to keep the temperature colder. The freezer control adjusts the cold air flow from the freezer to the refrigerator. Setting the freezer control to a lower temperature keeps more cold air in the Freezer compartment to make it colder.

If you need to adjust temperatures in the refrigerator or freezer, start by adjusting the refrigerator first. Wait 24 hours after the refrigerator adjustment to check the freezer temperature. If it is too warm or too cold, then adjust the freezer control as well.

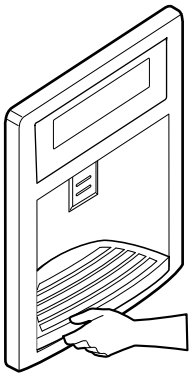

Use the settings listed in the chart below as a guide.

Always remember to wait at least 24 hours between adjustments.

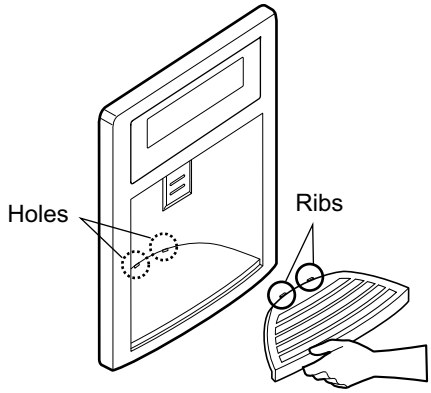

CONDITION/REASON:	RECOMMENDED ADJUSTMENT:
REFRIGERATOR section too warm • Door opened often • Large amount of food added • Room temperature very warm	**Turn REFRIGERATOR control to next higher number, wait 24 hours, then re-check**
FREEZER section too warm/ ice not made fast enough • Door opened often • Large amount of food added • Very cold room temperature (can't cycle often enough) • Heavy ice usage • Air vents blocked by items	**Turn FREEZER control to next higher number, wait 24 hours, Then re-check** **Move items out of airstream**
REFRIGERATOR section too cold • Controls not set correctly for your conditions	**Turn REFRIGERATOR control to next lower number, wait 24 hours, then re-check**
FREEZER section too cold • Controls not set correctly for your conditions	**Turn FREEZER control to next lower number, wait 24 hours, then re-check**

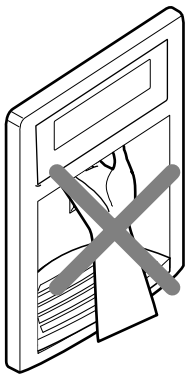

WATER DISPENSER

Tray can be easily removed by pressing and pulling it.

Tilt up the front of tray slightly and snap the ribs into the holes to reinstall the tray.

⚠ **WARNING:** Do not throw your hands in the water & ice opening. Doing it can result in amputation or cuts.

FOOD STORAGE GUIDE

Storing Fresh Food

Wrap or store food in the refrigerator in airtight and moisture-proof material unless otherwise noted. This prevents food odor and taste transfer throughout the refrigerator. For dated products, check date code to ensure freshness.

Butter or margarine

Keep opened butter in a covered dish or closed compartment. When storing an extra supply, wrap in freezer packaging and freeze.

Cheese

Store in the original wrapping until you are ready to use it. Once opened, rewrap tightly in plastic wrap or aluminum foil.

Milk

Wipe milk cartons. For best storage, place milk on interior shelf, not on door shelf.

Eggs

Store in original carton on interior shelf, not on door shelf.

Fruit

Wash, let dry, and store in refrigerator in plastic bags or in the crisper. Do not wash or hull berries until you are ready to use them. Sort and keep berries in their original container in a crisper, or store in a loosely closed paper bag on a refrigerator shelf.

Leafy vegetables

Remove store wrapping and trim or tear off bruised and discolored areas. Wash in cold water and drain. Place in a plastic bag or plastic container and store in the crisper.

Vegetables with skins (carrots, peppers)

Place in plastic bags or plastic container and store in crisper.

Fish

Use fresh fish and shellfish the same day purchased.

Snack pan

Store most chef fresh in original wrapping as long as it is airtight and moisture-proof. Rewrap if necessary.

Leftovers

Cover leftovers with plastic wrap or aluminum foil. Plastic containers with tight lids can also be used.

STORING FROZEN FOOD

NOTE: For further information about preparing food for freezing or food storage times, check a freezer guide or a reliable cookbook.

Packaging

Successful freezing depends on correct packaging. When you close and seal the package, it must not allow air or moisture in or out. If you do, you could have food odor and taste transfer throughout the refrigerator and also dry out frozen food.

Packaging recommendations:

- Rigid plastic containers with tight-fitting lids
- Straight-sided canning/freezing jars
- Heavy-duty aluminum foil
- Plastic-coated paper
- Non-permeable plastic wraps
- Specified freezer-grade self-sealing plastic bags

Follow package or container instructions for proper freezing methods.

Do not use:

- Bread wrappers
- Non-polyethylene plastic containers
- Containers without tight lids
- Wax paper or wax-coated freezer wrap
- Thin, semi-permeable wrap

Freezing

IMPORTANT: Do not store bottles in the freezer compartment - they may break when frozen, causing damage.

Your freezer will not quick-freeze any large quantity of food. Do not put more unfrozen food into the freezer than will freeze within 24 hours (no more than 2 to 3 lbs of food per cubic foot of freezer space). Leave enough space in the freezer for air to circulate around packages. Be careful to leave enough room at the front so the door can close tightly.

Storage times will vary according to the quality and type of food, the type of packaging or wrap used (airtight and moisture-proof) and the storage temperature. Ice crystals inside a sealed package are normal. This simply means that moisture in the food and air inside the package have condensed, creating ice crystals.

NOTE: Allow hot foods to cool at room temperature for 30 minutes, then package and freeze. Cooling hot foods before freezing saves energy.

NOTE: Do not store food near the sensor; it may cause the sensor to malfunction.

⚠ WARNING

Suffocation Hazard

When using dry ice, provide adequate ventilation. Dry ice is frozen carbon dioxide **(CO_2)**. When it vaporizes, it can displace oxygen, causing dizziness, light-headedness, unconsciousness and death by suffocation. Open a window and do not breathe the vapors.

REFRIGERATOR SECTION

REFRIGERATOR SHELVES

The shelves in your refrigerator are adjustable to meet your individual storage needs. Your model may have glass or wire shelves.

Storing similar food items together in your refrigerator and adjusting the shelves to fit different heights of items will make finding the exact item you want easier; it will also reduce the amount of time the refrigerator door is open, saving energy.

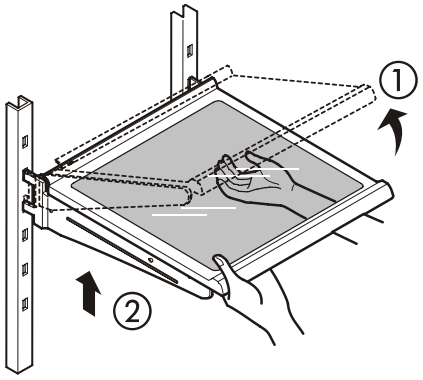

IMPORTANT: Do not clean glass shelves with warm water when they are cold. Shelves may break if exposed to sudden temperature changes or impact, such as bumping. For your protection, glass shelves are made with tempered glass, which will shatter into small pebble-sized pieces.

NOTE: Glass shelves are heavy. Use special care when removing them to avoid dropping them.

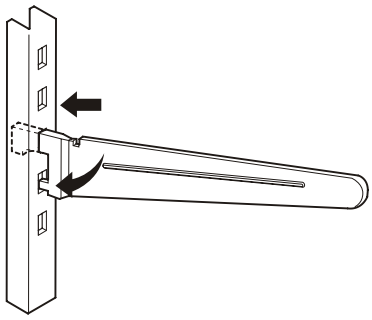

Adjusting Shelves

Remove shelves from the shipping position and replace shelves in the position you want.

To remove a shelf Tilt up the front of the shelf in the direction of (1) and lift it in the direction of (2). Pull the shelf out.

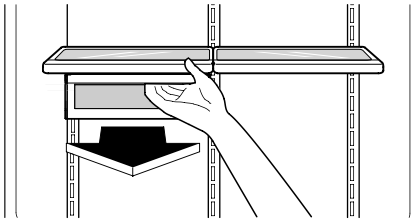

To replace a shelf Tilt the front of the shelf up and guide the shelf hooks into the slots at a desired height. Then lower the front of the shelf so that the hooks drop into the slots.

NOTE: Make sure that shelves are level from one side to the other. Failure to do so may result in the shelf falling or spilling food.

SNACK PAN

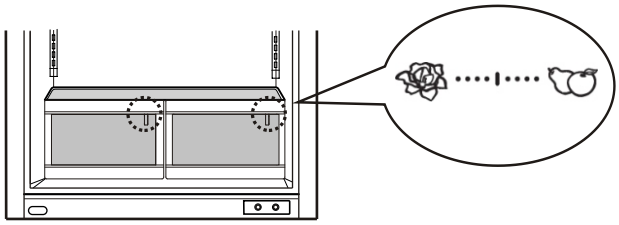

While holding the meat tray with one hand, pull it forward slightly. Lift slightly and pull it out.

CRISPER HUMIDITY CONTROL

You can control the amount of humidity in the moisture-sealed crispers. Adjust the control to any setting between and

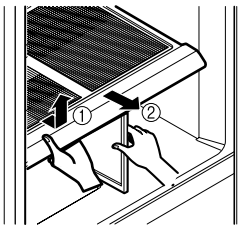

- : Lets moist air out of the crisper for best storage of fruits.
- : Keeps moist air in the crisper for best storage of fresh, leafy vegetables.

CRISPER COVER

To remove cover frame:

1. Remove both crisper drawers.
2. Remove glass cover from frame. Set safely aside for rest of crisper removal procedure.
3. While holding crisper cover frame support, pull the frame up and out.

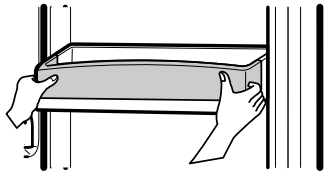

WARNING: Be careful when handling glass cover since glass is not attached to cover.

MODULAR DOOR BINS

The door bins are removable for easy cleaning and adjusting.

1. To remove the bin, simply lift the bin up and pull straight out.
2. To replace the bin, slide it in above the desired support button and push down until it stops.

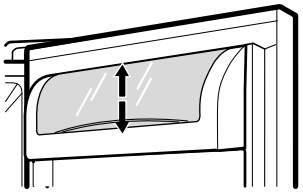

WARNING: Somebody can be hurt if door bins are not firmly assembled.

NOTE: DO NOT adjust a bin that is loaded with food.

CAUTION: DO NOT allow children to play with baskets. Sharp corners on baskets could cause injury.

DAIRY CORNER

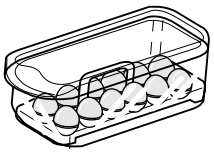

1. **To remove the dairy corner**, simply lift it and pull straight out.
2. **To replace the dairy bin,** slide it in above the desired location and push down until it stops.

EGG BOX

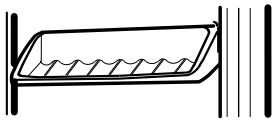

Store Egg Box on interior shelf, not on door shelf.

CAUTION: Do not use the egg box as an ice storage bin in the freezer compartment. The egg box can easily break if it freezes.

CAN RACK (On some models)

The Can Rack holds up to beverage cans.

1. To remove the Can Rack, simply lift the bin up and pull straight out.
2. To install the Can Rack, slide it in above the desired support button and push down until it stops.

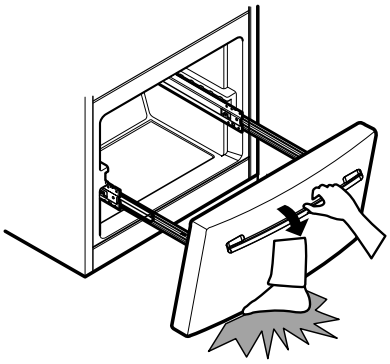

FREEZER SECTION

TILTING DOOR

The tilting door provides easy access for stored foods.

How to use:

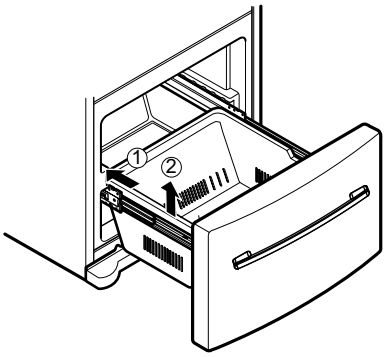

Tilt the door down and pull it out.

⚠ **WARNING:** Be careful when you open tilting door so that you do not injure your foot!

DURABASE

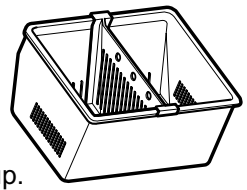

1. To remove the Durabase, push it back to the end as much as possible. Tilt up the front of the Durabase and pull straight out.
2. To install, insert the Durabase in rail assembly.

⚠ **WARNING:** When the guide of the freezer drawer is removed, children may crawl inside.

DURABASE DIVIDER

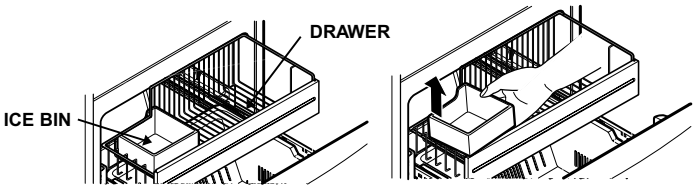

The Durabase divider allows you to organize the Durabase area into sections.

1. To remove, pull divider staight up.
2. To install, hook top corners of divider over top edge of durabase.

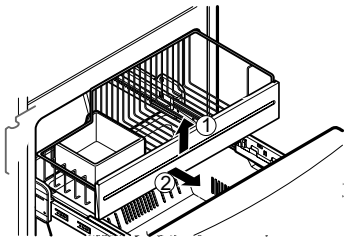

ICE BIN

1. To separate the ice bin, pull out the drawer as much as possible.
2. Gently lift and pull out the ice bin.
3. To reinstall, pull out the drawer as much as possible and the ice bin in its correct position, and then push in the drawer.

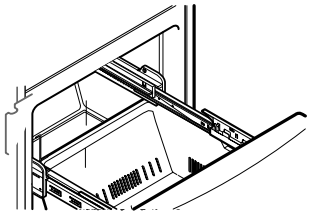

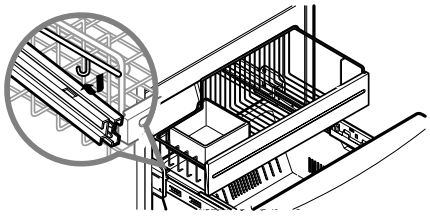

GLIDE-OUT DRAWER BASKET

1. To remove, lift basket up and pull out straight out.

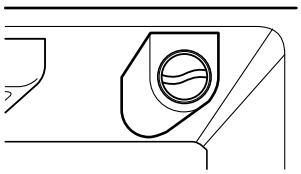

2. To Install, pull both rails out to full extension. Hook the basket supports into the rail tabs and push to the back of compartment.

FILTER

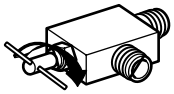

It is recommended that you replace the filter when the water filter indicator light turns on or your water dispenser or ice maker decreases noticeably.

After changing the water filter cartridge, reset the water filter status display and indicator light by pressing and holding the BUTTON for 3 seconds.

How to change the old cartridge.

1. Turn the shutoff valve off (house valve).

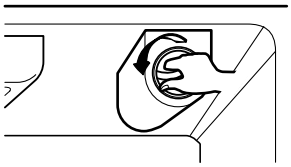

2. Dispense water from the system to empty the tubing (approximately for 50 seconds).

3. Remove the old cartridge.

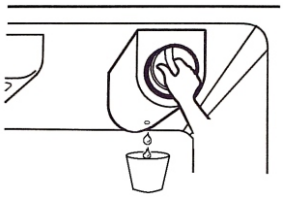

Rotate the knob of the cartridge counter clockwise.

When the cartridge is removed, it will click out of place.

Pull out the cartridge.

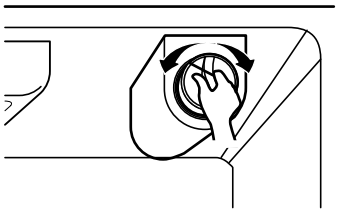

NOTE: There will be water in the cartridge. Some spilling may occur through the hole at rear bottom side of cover. You may use a cup or something like that to prevent spilt water drop into food.

4. Replace with a new cartridge.

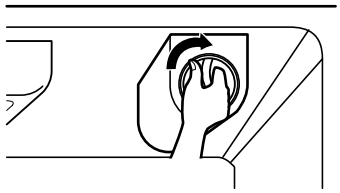

Take the new cartridge out of its packaging and remove protective cover from the o-rings.

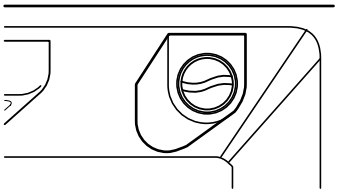

With cartridge knob in the vertical position, push the new filter cartridge into the cover until it stops.

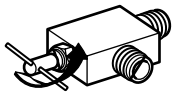

If you can´t turn the filter from side to side, it isn' t fully inserted. Push it in firmly and twist it into place. You will hear it click into place.

Using its handle, twist the cartridge clockwise about 1/4 turn. You will hear when it clicks into place.

5. Turn the shutoff valve on (house valve).

6. Flush water out from the system until air gets eliminated and water start to dispense (approximately for 3 minutes).

NOTE: To purchase replacement water filter cartridges, visit your local appliance dealer or part distributor.

⚠ WARNING

Explosion Hazard

Use non-flammable cleaner.

Failure to do can result in death, explosion, or fire.

Both the refrigerator and freezer sections defrost automatically. However, clean both sections about once a month to prevent odors. Wipe up spills immediately.

GENERAL CLEANING TIPS

- Unplug refrigerator or disconnect power.
- Remove all removable parts, such as shelves, crispers, etc.
- Use a clean sponge or soft cloth and a mild detergent in warm water. Do not use abrasive or harsh cleaners.
- Hand wash, rinse and dry all surfaces thoroughly.
- Plug in refrigerator or reconnect power.

OUTSIDE

Waxing external painted metal surfaces helps provide rust protection. Do not wax plastic parts. Wax painted metal surfaces at least twice a year using appliance wax (or auto paste wax). Apply wax with a clean, soft cloth.

For products with a stainless steel exterior, use a clean sponge or soft cloth and a mild detergent in warm water. Do not use abrasive or harsh cleaners. Dry thoroughly with a soft cloth.

INSIDE WALLS (allow freezer to warm up so cloth won't stick)

To help remove odors, you can wash the inside of the refrigerator with a mixture of baking soda and warm water. Mix 2 tablespoons baking soda to 1 quart of water (26 g soda to 1 liter water.) Be sure the baking soda is completely dissolved so does it not scratch the surfaces of the refrigerator.

DOOR LINERS AND GASKETS

Do not use cleaning waxes, concentrated detergents, bleaches, or cleaners containing petroleum plastic parts.

PLASTIC PARTS (covers and panels)

Do not use paper towels, window sprays, abrasive cleansers, or flammable fluids. These can scratch or damage the material.

CONDENSER COILS

Remove grille base. See the grille base section.

Use a vacuum cleaner with an extended attachment to clean condenser coils.

Vacuum coils when dusty or dirty. Coils may need to be cleaned as often as every other month.

Replace grille base.

LIGHT BULB REPLACEMENT

⚠ WARNING

Electrical Shock Hazard

Before replacing a burned-out light bulb, either unplug the refrigerator or turn off power at the circuit breaker or fuse box.

NOTE: Moving the control to the OFF position does not remove power to the light circuit.

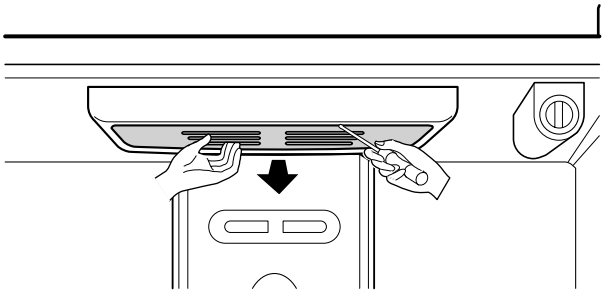

NOTE: Not all appliance bulbs will fit your refrigerator. Be sure to replace the bulb with one of the same size, shape and wattage.

To change the refrigerator light:

1. Unplug the power cord from the outlet.

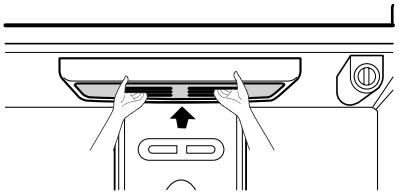

2. Remove refrigerator shelves.

3. Release the hooks on the front of the light shield with the help of a flat screwdriver and pull the shield down to remove it.

4. Turn the bulb counterclockwise.

5. To assemble, first insert the hooks at the back and then push up the light shield.

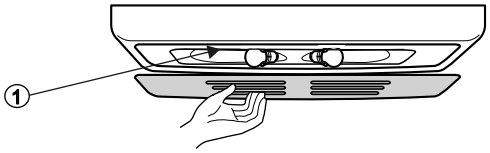

To change the freezer light:

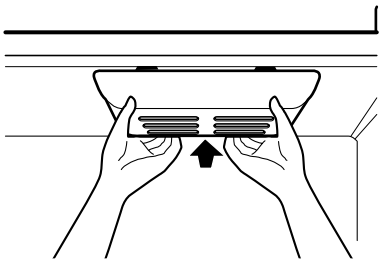

1. Unplug refrigerator or disconnect power.

2. Reach behind light shield to remove bulb.

3. Replace bulb with a wattage indicated in the refrigerator section, as shown in picture ①.

4. Plug in refrigerator or reconnect power.

POWER INTERRUPTIONS

If the electricity goes off, call the power company and ask how long it will be off.

1. If the power will be out for 24 hours or less, keep both refrigerator doors closed to help foods stay cold and frozen.

2. If the power will be out for more than 24 hours:

a) Remove all frozen food and store it in a frozen food locker.

OR

b) Place 2 lbs of dry ice in the freezer for every cubic foot of freezer space. This will keep the food frozen for two to four days. While handling dry ice, wear gloves to protect your hands from frostbite.

OR

c) If neither a food locker nor dry ice is available, consume or can perishable food at once.

WHEN YOU GO ON VACATION

If you choose to leave the refrigerator on while you are away, follow these steps to prepare your refrigerator before you leave.

1. Use up any perishables and freeze other items.

2. Empty the ice bin.

If you choose to turn the refrigerator off before you leave, follow these steps.

1. Remove all food from the refrigerator.

2. Depending on your model, set the thermostat control (refrigerator control) to OFF. See the **Setting the Controls** section**.**

3. Clean refrigerator, wipe it and dry well.

4. Tape rubber or wood blocks to the tops of both doors to prop them open far enough for air to get in. This stops odor and mold from building up.

WHEN YOU MOVE

When you are moving your refrigerator to a new home, follow these steps to prepare it for the move.

1. Remove all food from the refrigerator and pack all frozen food in dry ice.

2. Depending on your model, turn the thermostat control (refrigerator control) to OFF. See the **Setting the Controls** section.

3. Unplug the refrigerator.

4. Empty water from the defrost pan.

5. Clean, wipe and dry thoroughly.

6. Take out all removable parts, wrap them well and tape them together so they don't shift and rattle during the move.

7. Depending on the model, raise the front of the refrigerator so it rolls more easily OR screw in the leveling legs all the way so they don't scrape the floor. See the **Door Closing** section.

8. Tape the doors shut and tape the power cord to the refrigerator cabinet.

When you get to your new home, put everything back and refer to the **Installing Your Refrigerator** section for preparation instructions.

ABOUT THE AUTOMATIC ICEMAKER

⚠ WARNING

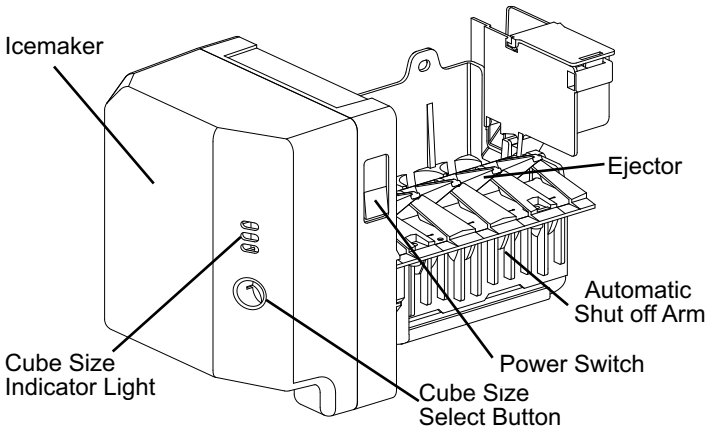

Personal Injury Hazard

Avoid contact with the moving parts of the ejector mechanism, or with the heating element that releases the cubes. DO NOT place fingers or hands on the automatic icemaking mechanism while the refrigerator is plugged in.

NOTE: Automatic Ice Maker feature is included only in certain models. Please check your product specification.

OPERATION INSTRUCTIONS

A newly-installed refrigerator may take 12 to 24 hours to begin making ice.

The icemaker will produce five cubes per cycle — approximately 90-100 cubes in a 24-hour period, depending on freezer compartment temperature, room temperature, number of door openings and other operating conditions.

If the refrigerator is used before the water connection is made to the icemaker, set the power switch to **O (off)**.

When the refrigerator has been connected to the water supply, set the power switch to **I (on)**.

The icemaker will fill with water when it cools to freezing. A newly-installed refrigerator may take 12 to 24 hours to begin making ice cubes.

Throw away the first few batches of ice to allow the water line to clear.

Be sure nothing interferes with the sweep of the feeler arm.

When the bin fills to the level of the feeler arm, the icemaker will stop producing ice.

It is normal for several cubes to be stuck together.

If ice is not used frequently, old ice cubes will become cloudy, taste stale, and shrink.

NOTE: If the cube size is smaller or larger than you expected, you can regulate the size with the cube size button.

Every time you press the cube size button, the indicator moves up one light. The higher the light position, the larger the cubes will be. Pressing at highest position returns indicator to lowest position.

WHEN YOU SHOULD SET THE ICEMAKER POWER SWITCH TO O (OFF)

- When the water supply will be shut off for several hours.
- When the ice storage bin is removed for more than a minute or two.
- When the refrigerator will not be used for several days.

NORMAL SOUNDS YOU MAY HEAR

- The icemaker water valve will buzz as the icemaker fills with water. If the power switch is in the **I (on)** position, it will buzz even if it has not yet been hooked up to water. To stop the buzzing, move the power switch to **O (off)**.

  NOTE: Keeping the power switch in the **I (on)** position before the water line is connected can damage the icemaker.
- You will hear the sound of cubes dropping into the bin and water running in the pipes as the icemaker refills.

PREPARING FOR VACATION

Set the icemaker power switch to **O (off)**and shut off the water supply to the refrigerator.

If the ambient temperature will drop below freezing, have a qualified servicer drain the water supply system to prevent serious property damage due to flooding from ruptured water lines or connections.

CONNECTING THE WATER LINE

NOTE: Water line installation is needed when the Automatic Ice Maker and/or Water Dispenser features are available on your product.

BEFORE YOU BEGIN

This water line installation is not warranted by the refrigerator or icemaker manufacturer. Follow these instructions carefully to minimize the risk of expensive water damage.

Water hammer (water banging in the pipes) in house plumbing can cause damage to refrigerator parts and lead to water leakage or flooding. Call a qualified plumber to correct water hammer before installing the water supply line to the refrigerator.

To prevent burns and product damage, do not hook up the water line to the hot water line.

If you use your refrigerator before connecting the water line, make sure the icemaker power switch is in the **O (off)** position.

Do not install the icemaker tubing in areas where temperatures fall below freezing.

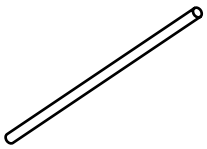

When using any electrical device (such as a power drill) during installation, be sure the device is double-insulated or grounded in a manner to prevent the hazard of electric shock, or is battery-powered.

All installations must be in accordance with local plumbing code requirements.

NOTE: Wear eye protection.

WHAT YOU WILL NEED

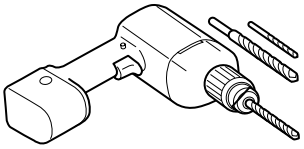

- **Copper Tubing**, 1/4" outer diameter to connect the refrigerator to the water supply. Be sure both ends of the tubing are cut square.

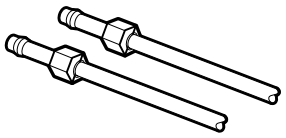

To determine how much tubing you need: measure the distance from the water valve on the back of the refrigerator to the water supply pipe. Then add 8 feet (2.4 m). Be sure there is sufficient extra tubing (about 8 feet [2.4 m] coiled into 3 turns of about 10 [25 cm] diameter) to allow the refrigerator to move out from the wall after installation.

Be sure that the kit you select allows at least 8 feet (2.4 m) as described above.

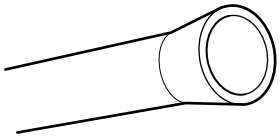

- **A cold water supply**. The water pressure must be between 20 and 120 p.s.i. on models without a water filter and between 40 and 120 p.s.i. on models with a water filter.
- **Power drill**.
- 1/2" **or adjustable wrench**.
- **Straight- and Phillips-blade screwdriver**

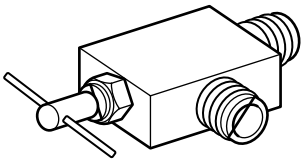

- **Two 1/4" outer diameter compression nuts and 2 ferrules (sleeves)** to connect the copper tubing to the shutoff valve and the refrigerator water valve.

- If your existing copper water line has a flared fitting at the end, you will need an **adapter** (available at plumbing supply stores) to connect the water line to the refrigerator OR you can cut off the flared fitting with a tube cutter and then use a compression fitting.

- **Shutoff valve to connect to the cold water line**. The shutoff valve should have a water inlet with a minimum inside diameter of 5/32" at the point of connection to the COLD WATER LINE. Saddle-type shutoff valves are included in many water supply kits. Before purchasing, make sure a saddle-type valve complies with your local plumbing codes.

INSTALLATION INSTRUCTIONS

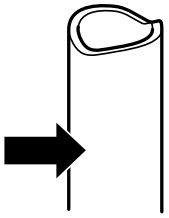

Install the shutoff valve on the nearest frequently used drinking water line.

1. SHUT OFF THE MAIN WATER SUPPLY

Turn on the nearest faucet to relieve the pressure on the line.

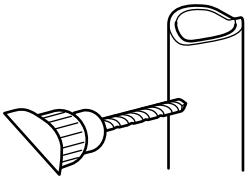

2. CHOOSE THE VALVE LOCATION

Choose a location for the valve that is easily accessible. It is best to connect into the side of a vertical water pipe. When it is necessary to connect into a horizontal water pipe, make the connection to the top or side, rather than at the bottom, to avoid drawing off any sediment from the water pipe.

3. DRILL THE HOLE FOR THE VALVE

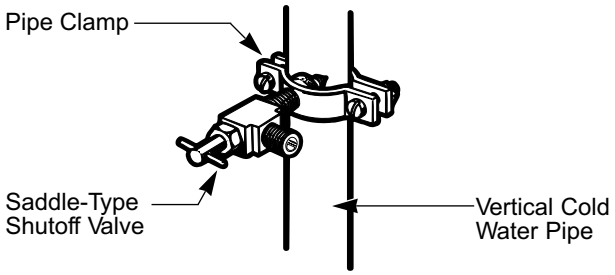

Drill a 1/4" hole in the water pipe (even if using a self-piercing valve) using a sharp bit. Remove any burrs resulting from drilling the hole in the pipe. Take care not to allow water to drain into the drill. Failure to drill a 1/4 hole may result in reduced ice production or smaller cubes.

INSTALLATION INSTRUCTIONS (CONTINUED)

4. FASTEN THE SHUTOFF VALVE

Fasten the shutoff valve to the cold water pipe with the pipe clamp.

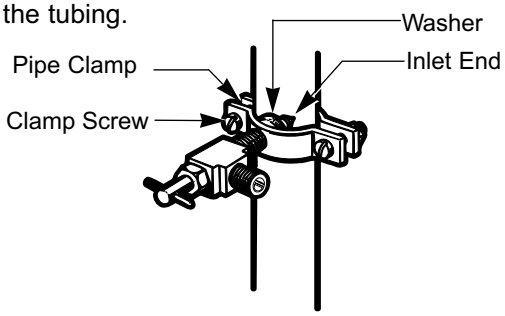

NOTE: Commonwealth of Massachusetts Plumbing Codes 248CMR shall be adhered to. Saddle valves are illegal and use is not permitted in Massachusetts. Consult with your licensed plumber.

5. TIGHTEN THE PIPE CLAMP

Tighten the clamp screws until the sealing washer begins to swell.

NOTE: Do not overtighten or you may crush the tubing.

6. ROUTE THE TUBING

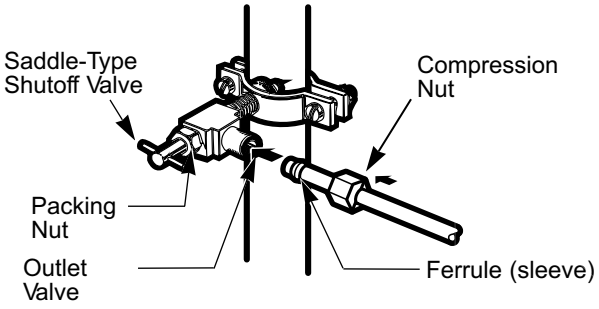

Route the tubing between the cold water line and the refrigerator.

Route the tubing through a hole drilled in the wall or floor (behind the refrigerator or adjacent base cabinet) as close to the wall as possible.

NOTE: Be sure there is sufficient extra tubing (about 8 feet coiled into 3 turns of about 10 diameter) to allow the refrigerator to move out from the wall after installation.

7. CONNECT THE TUBING TO THE VALVE

Place the compression nut and ferrule (sleeve) for copper tubing onto the end of the tubing and connect it to the shutoff valve. Make sure the tubing is fully inserted into the valve. Tighten the compression nut securely.

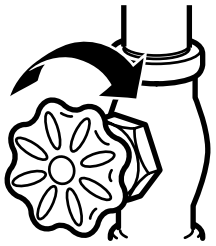

NOTE: Commonwealth of Massachusetts Plumbing Codes 248CMR shall be adhered to. Saddle valves are illegal and use is not permitted in Massachusetts. Consult with your licensed plumber.

8. FLUSH OUT THE TUBING

Turn the main water supply on and flush out the tubing until the water is clear.

Shut the water off at the water valve after about one quart of water has been flushed through the tubing.

CONNECTING THE WATER LINE

9. CONNECT THE TUBING TO THE REFRIGERATOR

NOTES:

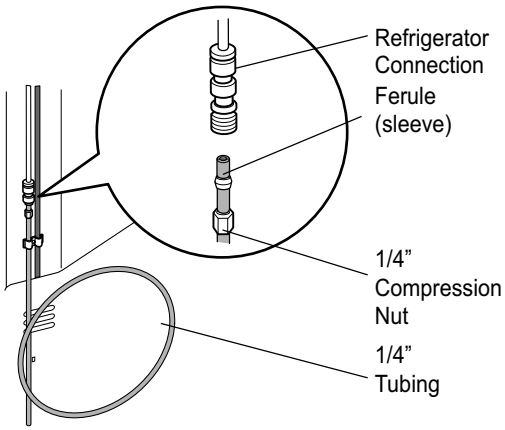

- Before making the connection to the refrigerator, be sure the refrigerator power cord is not plugged into the wall outlet.
- If your refrigerator does not have a water filter, we recommend installing one. If your water supply has sand or particles that could clog the screen of the refrigerator's water valve. Install the filter in the water line near the refrigerator.

  Remove the plastic flexible cap from the refrigerator connection.

Place the compression nut and ferrule (sleeve) onto the end of the tubing.

Insert the end of the tubing into the connection as far as possible. While holding the tubing, tighten the fitting.

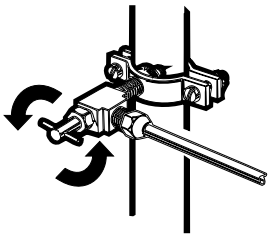

Fasten the tubing into the tubing Clamp attached to the back of the refrigerator.
First, loosen the screw fastening the clamp. Next, insert the tubing in the groove. Finally, re-fasten the screw.

10. TURN THE WATER ON AT THE SHUTOFF VALVE

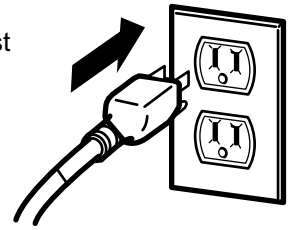

Tighten any connections that leak.

Reattach the compressor compartment access cover.

11. PLUG IN THE REFRIGERATOR

Arrange the coil of tubing so that it does not vibrate against the back of the refrigerator or against the wall. Push the refrigerator back to the wall.

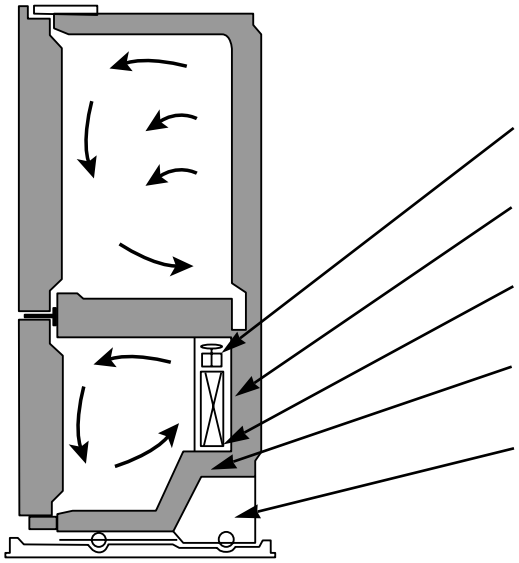

12. START THE ICEMAKER

Set the icemaker power switch to the **ON** position. The icemaker will not begin to operate until it reaches its operating temperature of 15°F (-9°C) or below. It will then begin operation automatically if the icemaker power switch is in the **I (on)** position.

TROUBLESHOOTING GUIDE

UNDERSTANDING SOUNDS YOU MAY HEAR

Your new refrigerator may make sounds that your old one didn't make. Because the sounds are new to you, you might be concerned about them. Most of the new sounds are normal. Hard surfaces, like the floor, walls and cabinets, can make the sounds seem louder than they actually are. The following describes the kinds of sounds and what may be making them.

- The defrost timer will click when the automatic defrost cycle begins and ends. The thermostat control (or refrigerator control, depending on the model) will also click when cycling on and off.
- Rattling noises may come from the flow of refrigerant, the water line, or items stored on top of the refrigerator.
- Your refrigerator is designed to run more efficiently to keep your food items at the desired temperature. The high efficiency compressor may cause your new refrigerator to run longer than your old one, and you may hear a pulsating or high-pitched sound.
- You may hear the evaporator fan motor circulating the air through the refrigerator and freezer compartments.
- As each cycle ends, you may hear a gurgling sound due to the refrigerant flowing in your refrigerator.
- Contraction and expansion of the inside walls may cause a popping noise.
- Water dripping on the defrost heater during a defrost cycle may cause a sizzling sound.
- You may hear air being forced over the condenser by the condenser fan.
- You may hear water running into the drain pan during the defrost cycle.

REFRIGERATOR DOES NOT OPERATE

Check if...	**Then...**
The power supply cord is unplugged.	Firmly plug the cord into a live outlet with proper voltage.
A household fuse has blown or circuit breaker tripped.	Replace the fuse or reset the circuit breaker.
The refrigerator control is set to the OFF position.	Refer to the **Setting the Controls** .
Refrigerator is in the defrost cycle.	Wait about 30 minutes for defrost cycle to end.

VIBRATION OR RATTLING NOISE

Check if...	**Then...**
The refrigerator is not resting solidly on the floor.	Floor is weak or uneven or leveling legs need adjusting. See **Installation** Section.

LIGHTS DO NOT WORK

Check if...	**Then...**
The power supply cord is unplugged.	Firmly plug the cord into a live outlet with proper voltage.
Light bulb is loose in the socket.	Turn the refrigerator control to the OFF position and unplug the refrigerator. Gently remove the bulb and reinsert. Then plug in refrigerator and reset the refrigerator control.
Light bulb has burned out.	Replace with an appliance bulb of the same wattage, size and shape available at your local hardware store. (See the **Changing the Light Bulb(s)** Section) Turn the temperature control to the OFF position and unplug the refrigerator prior to replacement.

TROUBLESHOOTING GUIDE

COMPRESSOR MOTOR SEEMS TO RUN TOO MUCH

Check if...	Then...
The refrigerator that was replaced was an older model.	Modern refrigerators with more storage space require more operating time.
The room temperature is hotter than normal.	The motor will run longer under warm conditions. At normal room temperatures, expect your motor to run about 40% to 80% of the time. Under warmer conditions, expect it to run even more often.
The door is opened often or a large amount of food has just been added.	Adding food and opening the door warms the refrigerator. It is normal for the refrigerator to run longer in order to cool the refrigerator back down. Adding a large amount of food warms the refrigerator. See the **Food Storage Guide** Section. In order to conserve energy, try to get everything you need out of the refrigerator at once, keep food organized so it is easy to find and close the door as soon as the food is removed.
The refrigerator was recently plugged in and the refrigerator control was set correctly	The refrigerator will take up to 24 hours to cool completely.
The refrigerator control was not set correctly for the surrounding conditions.	See the **Adjusting control settings** Section.
The doors are not closed completely.	Push the doors firmly shut. If they will not shut all the way, see **Doors will not close completely** below.
The condenser coils are dirty.	This prevents air transfer and makes the motor work harder. Clean the condenser coils. Refer to the **Care and Cleaning** section.

DOORS WILL NOT CLOSE COMPLETELY

Check if...	Then...
The refrigerator is not leveled.	See the **Installation** Section to level refrigerator.
Food packages are blocking the door open.	Rearrange food containers to clear door and door shelves.
The ice bin, crisper cover, pans, shelves, door bins or baskets are out of position.	Push bins all the way in and put crisper cover, pans, shelves and baskets into their correct positions. See the **Using Your Refrigerator** Section.
The gaskets are sticking.	Clean gaskets and the surface that they touch. Rub a thin coat of paraffin wax on the gaskets after cleaning.
The refrigerator wobbles or seems unstable.	Level the refrigerator. Refer to the **Door Closing and Alignment** Section.
The doors were removed during product installation and not properly replaced.	Remove and replace the doors according to the **Removing, and Replacing Refrigerator Doors** section or call a qualified service technician.

FROST OR ICE CRYSTALS ON FROZEN FOOD

Check if...	Then...
The door is not closing properly.	See **Doors will not close completely** above.
The door is opened often.	When the door is opened, warm, humid air is allowed in the freezer resulting in frost.

TROUBLESHOOTING GUIDE

ICE HAS OFF-TASTE OR ODOR

Check if...	Then...
The icemaker was recently installed.	Discard first few batches of ice to avoid discolored or off-flavored ice.
The ice has been stored for too long.	Throw away old ice and make new supply.
The food has not been wrapped tightly in either compartment.	Rewrap foods since odors may migrate to the ice if food is not wrapped properly.
The water supply contains minerals such as sulfur.	A filter may need to be installed to eliminate taste and odor problems.
The interior of refrigerator needs cleaning.	See **Care and Cleaning** section.
Ice storage bin needs cleaning.	Empty and wash bin. Discard old cubes.

THERE IS WATER IN THE DEFROST DRAIN PAN

Check if...	Then...
The refrigerator is defrosting.	The water will evaporate. It is normal for water to drip into the defrost pan.
It is more humid than normal.	Expect that the water in the defrost pan will take longer to evaporate. This is normal when it is hot or humid.

THE REFRIGERATOR SEEMS TO MAKE TOO MUCH NOISE

Check if...	Then...
The sounds may be normal for your refrigerator.	Refer to the **Understanding Sounds You May Hear section.**

THE ICEMAKER IS NOT PRODUCING ICE OR ICE CUBES ARE FREEZING TOO SLOWLY

Check if...	Then...
The freezer temperature is cold enough to produce ice.	Wait 24 hours after hook-up for ice production. See the **Setting the Controls** Section.
Door left open.	Check to see if something is holding the door open.

CUBES PRODUCED BY ICEMAKER ARE TOO SMALL

Check if...	Then...
Smaller cube size level is selected.	Select larger cube size using cube size selector.
Water shutoff valve connecting refrigerator to water line may be clogged.	Call a plumber to clear the valve.

THE DOORS ARE DIFFICULT TO OPEN

Check if...	Then...
The gaskets are dirty or sticky.	Clean gaskets and the surfaces that they touch. Rub a thin coat of appliance polish or kitchen wax on the gaskets after cleaning
The door is reopened within a short time after being opened.	When you open the door, warmer air enters the refrigerator. As the warm air cools, it can create a vacuum. If the door is hard to open, wait 5 minutes to allow the air pressure to equalize, then see if it opens more easily.

TROUBLESHOOTING GUIDE

AUTOMATIC ICEMAKER DOES NOT WORK

Check if...	Then...
Icemaker power switch in the **O (off)** position.	Move the switch to the **I (on)** position.
Water supply turned off or not connected.	See the **Connecting the Water Line** section.
Freezer compartment too warm.	Wait 24 hours for the freezer to reach its ideal temperature.
Piled up cubes in the storage bin cause the icemaker to shut off.	Level cubes by hand.

TEMPERATURE IS TOO WARM OR THERE IS INTERIOR MOISTURE BUILDUP

Check if...	Then...
The air vents are blocked. Cold air circulates from the freezer to the fresh food section and back again through air vents in the wall dividing the two sections.	Locate air vents by using your hand to sense airflow and move all packages that block vents and restrict airflow. Refer to **multi flow** Section for the location of air vents.
The doors are opened often.	When the door is opened, warm humid air is allowed into the refrigerator. The more the door is opened, the faster the humidity builds up, and the more warm air the refrigerator must cool. In order to keep the refrigerator cool, try to get everything you need out of the refrigerator at once, keep food organized so it is easy to find and close the door as soon as the food is removed.
The control is not set correctly for the surrounding conditions.	Refer to the **Setting the Controls** Section. Wait 24 hours for temperatures to stabilize or even out. If the temperature is too cold or too warm, move the dial one number at a time.
A large amount of food has just been added to the refrigerator or freezer.	Adding food warms the refrigerator. It can take a few hours for the refrigerator to return to normal temperature.
The food is not packaged correctly.	Wrap food tightly and wipe off damp containers prior to storing in the refrigerator to avoid moisture accumulation. If necessary, repackage food according to the guidelines in the **Food Storage Guide** Section.
The doors are not closing completely.	See **Doors will not close completely**
The weather is humid.	In humid weather, air carries moisture into refrigerator when doors are opened.
A self-defrost cycle was completed.	It is normal for droplets to form on the back wall after the refrigerator self-defrosts.

Get it fixed, at your home or ours!

Your Home

For repair - **in your home** - of **all** major brand appliances, lawn and garden equipment, or heating and cooling systems, **no matter who made it, no matter who sold it!**
