# LAS655K SW Update Guide – Using USB

## Main Program File name of LAS655K is LG\_HB\_A100M80.ROM

### Step 1: Creating an update file

You can create an update file in USB memory.

[Option A] Create an update file on USB

You can copy and update the update file to USB memory.

#### Preparation:

The USB Memory Device must have at least 200 MB of free space.

- 1. Connect USB to PC.
- 2. Copy the latest version of Update File to USB.

(You do not need to copy it to USB root and create a separate folder)

## **Step 2: Firmware Update**

- 1) Turn on the Soundbar and display the Home menu.
- 2) Insert USB with firmware file into Soundbar.
  - USB: Connect to the USB port on the front of the soundbar.

3) An update popup window will appear, showing the current version and the version to be updated.

- 4) Press the Enter button on the remote control to start the firmware update.
  - Main firmware update time: about 3 minutes.

- 5) When the update is completed, the power is automatically turned off.
- 6) Please turn on the power and remove USB for firmware update.

## LAS655K SW Update Guide – Using Network

You can update the firmware by connecting the device directly to the S/W update server.

## **Configure network settings**

To connect the device directly to the S/W update server and update the firmware, the device is connected to the network. If the device is not connected to a network, physically connect it.

**Step 1.** After booting the device, select Settings from the Home menu. **Step 3.** If you select Others -> Software -> Update, the following pop-up will occur if there is a new update image on the server.

Step 2. Select Others -> Software -> Update

Update
A new update was found.
The update takes a few minutes. Do you want to update?
